

Si4311 DEMO BOARD USER'S GUIDE

1. Overview

The Silicon Laboratories Si4311-DEMO board provides a complete FSK radio design with numerous selectable features that demonstrate the capabilities of the Silicon Laboratories Si4311 FSK receiver. The Si4311-DEMO board can be configured to receive FSK data from an SMA connector or wirelessly with an onboard printed circuit board (PCB) antenna. The demodulated output data from the Si4311-DEMO board can be measured via an SMA connector and/or observed with an LED and/or heard with an audio buzzer. The system is powered by a 9 V battery or an external 3.3 V power supply.

2. Features

- Single chip FSK receiver
- Selectable 315/433.92 MHz carrier frequency
- Selectable data rate, frequency deviation

3. Description

Figures 1 and 2 show the physical layout of the board with key components indicated.

Figure 1. Si4311 DEMO Board Top Side

Figure 2. Si4311 DEMO Board Bottom Side with 9 V Battery

Power Supply Connector

J1: Jumper to select external 3.3 V supply. This is a solderable jumper and should be shorted when used.

J7: External 3.3 V supply connector: +3.3 V with the jumper on the right side and GND on the left side.

J3: 9 V battery supply connector: Power on with the jumper on the right side and power off with the jumper on the left side.

J8: Jumper used to measure Si4311 current consumption.

- Jumper connected (shorted) is normal operation.
- Jumper connected with an ammeter in series to measure current.

D3: Power-on indicator. LED lights up when powered on.

RF Input

J4: SMA connector for an external RF input. Ensure inductor L3 is open to remove the PCB antenna when using the SMA input.

Demodulated Data Output

J5: SMA connector for demodulated data output.

External Clock Driver

J9/J17: These solder jumpers should be shorted when an external clock driver is used.

J10: External clock connection point.

Automatic Frequency Centering (AFC)

J11: Jumper used to select AFC function.

- Logic High (left side connection) to enable AFC.
- Logic Low (right side connection) to disable AFC.

Carrier Frequency Selection

J12: Jumper used to select 315 or 433.92 MHz carrier frequency.

- Logic High (left side connection) for 315 MHz.
- Logic Low (right side connection) for 433.92 MHz.

Bit Time Selection

J13/J14: Two jumpers used for bit time selection.

Table 1. Bit Time Selection

J13	J14	Bit Time [μ s]
0	0	1000
0	1	500
1	0	200
1	1	100

Frequency Deviation Selection

J15/J16: Two jumpers used for frequency deviation selection.

Table 2. Frequency Deviation Selection

J13	J14	Frequency Deviation [kHz]
0	0	30
0	1	50
1	0	70
1	1	90

Key Components

U4: Si4311 single chip FSK receiver.

X1: 16 MHz crystal.

D1: LED lights up when data output present.

B2: Audio buzzer sounds when data output is present.
