

DS55114/DS75114 Dual Differential Line Drivers

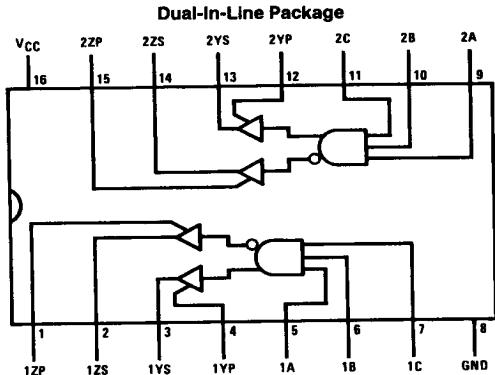

General Description

The DS55114/DS75114 dual differential line drivers are designed to provide differential output signals with high current capability for driving balanced lines, such as twisted pair at normal line impedances, without high power dissipation. The output stages are similar to TTL totem-pole outputs, but with the sink outputs, YS and ZS, and the corresponding active pull-up terminals, YP and ZP, available on adjacent package pins. Since the output stages provide TTL compatible output levels, these devices may also be used as TTL expanders or phase splitters.

Features

- Each circuit offers a choice of open-collector or active pull-up (totem-pole) outputs
- Single 5V supply
- Differential line operation
- Dual channels
- TTL/LS compatibility
- Designed to be interchangeable with Fairchild 96114 line drivers
- Short-circuit protection of outputs
- High current outputs
- Clamp diodes at inputs and outputs to terminate line transients
- Single-ended or differential AND/NAND outputs
- Triple inputs

Note 1: All voltage values are with respect to network ground terminal.

Note 2: For operation above 25°C free-air temperature, refer to Dissipation Derating Curves in the Thermal information section.

Note 3: All parameters, with the exception of OFF-state open-collector output current, are measured with the active pull-up connected to the sink output.

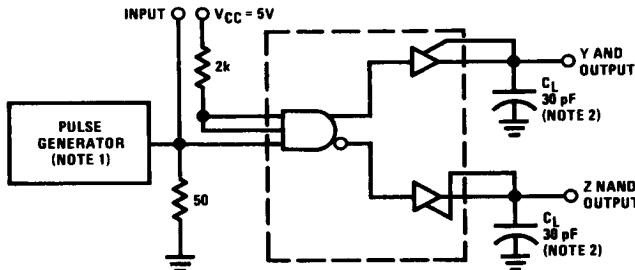

Note 4: All typical values are at $T_A = 25^\circ\text{C}$ and $V_{CC} = 5\text{V}$, with the exception of I_{CC} at 7V.

Note 5: Only one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

Switching Characteristics $V_{CC} = 5V$, $T_A = 25^\circ C$
