Model CVS575 is a SAW(surface acoustic wave) based Voltage Controlled Oscillator (VCSO) designed for High Performance PLLs. It is an ideal choice for Telecommunication applications needing to meet Low Jitter generation requirements.

It is housed in the industry standard 5x7.5x2.5mm SMD package. The Enable/Disable function was designed to be used with CMOS logic levels for ease of interfacing. It is not necessary to convert to LVPECL logic to turn the Output ON and OFF.
