ML9209-xx

Vacuum fluorescent display tube controller driver

GENERAL DESCRIPTION

The ML9209-xx is an alphanumeric type vacuum fluorescent display (VFD) tube controller driver IC which can display alphanumeric characters, symbols, and bar charts.

Vacuum fluorescent display tube drive signals are generated by serial data sent from a micro-controller. A display system is easily realized by internal ROM and RAM for character display.

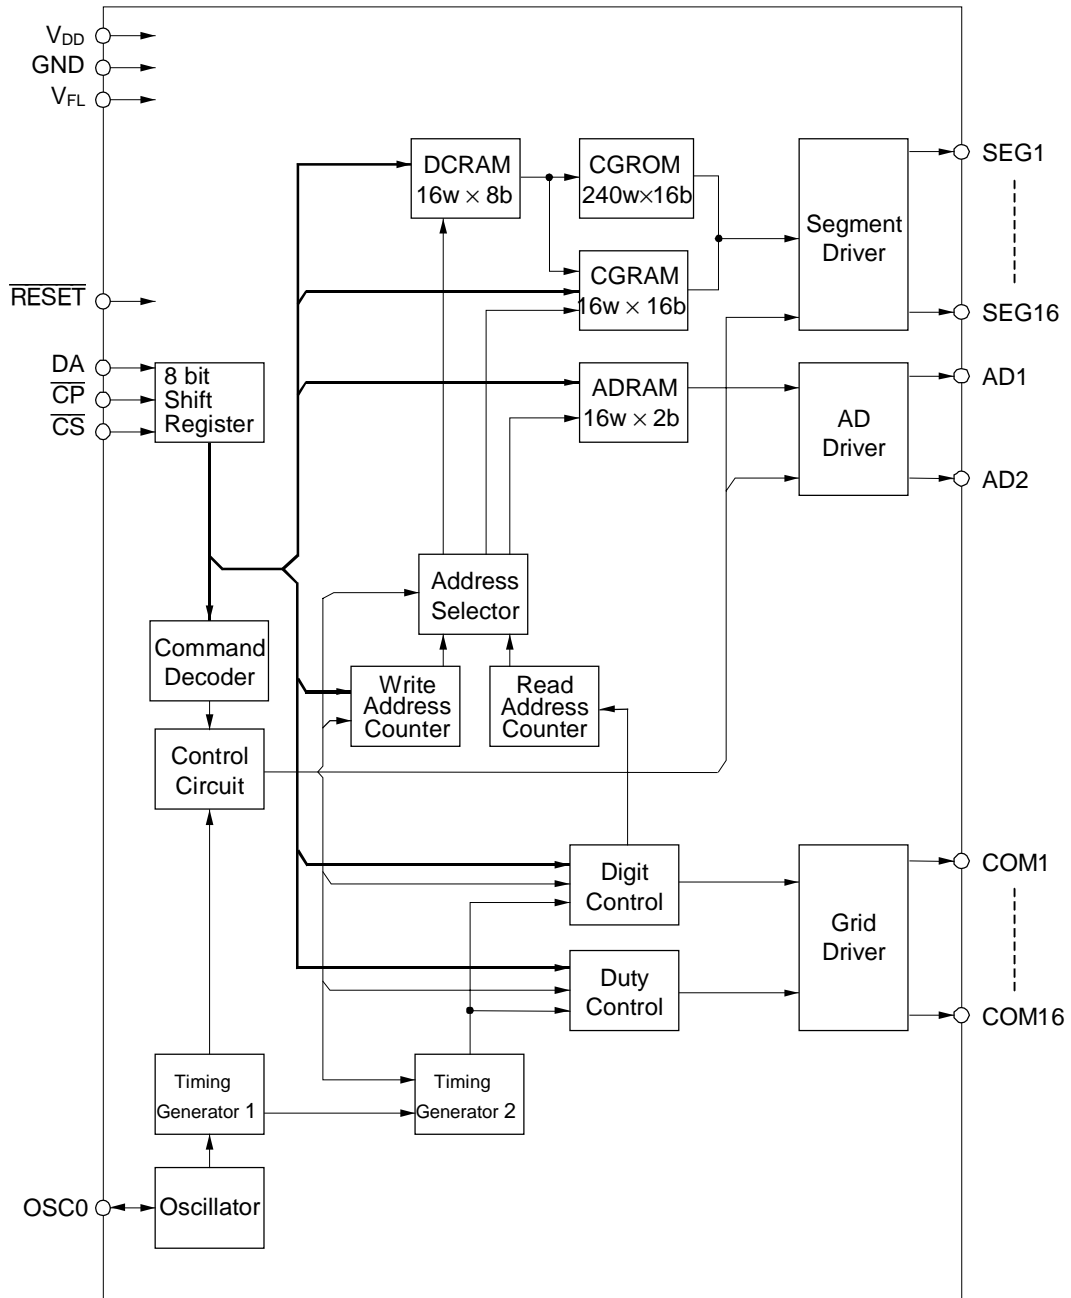

-01 is available as a general-purpose code.

Custom codes are provided on customer's request.

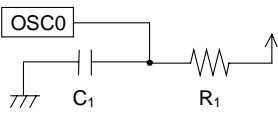

FEATURES

- Logic power supply and vacuum fluorescent display tube driving power supply (V_{DD})
: 3.3 V \pm 10% or 5.0 V \pm 10%
- Vacuum fluorescent display tube driving power supply (V_{FL})
: $V_{DD} - 20$ V to $V_{DD} - 42$ V
- VFD driver output current
(VFD driver output can be connected directly to the VFD tube. No pull-down resistor is required.)
 - Segment driver (SEG1-16) : -6 mA ($V_{FL} = V_{DD} - 42$ V)
 - Segment driver (AD1, 2) : -15 mA ($V_{FL} = V_{DD} - 42$ V)
 - Grid driver (COM1-16) : -30 mA ($V_{FL} = V_{DD} - 42$ V)
- Content of display
 - CGROM : 16 segments 240 types (character data)
 - CGRAM : 16 segments 16 types (character data)
 - ADRAM : 16 (display digit) \times 2 bits (symbol data)
 - DCRAM : 16 (display digit) \times 8 bits (register for character data display)
- Display control function
 - Display digits : 1 to 16 digits
 - Display duty (brightness adjustment) : 16 stages
 - All display lights ON/OFF
- Four interfaces with microcontroller: DA, \overline{CS} , \overline{CP} , \overline{RESET}
- Instruction executable with 1 byte (excluding data write for each RAM)
- Built-in oscillation circuit (resistor & capacitor connected externally)
- Package options:
 - 44-pin plastic QFP (QFP44-P-910-0.80-2K) (ML9209-xxGA)

BLOCK DIAGRAM

PIN DESCRIPTION

Pin	Symbol	Type	Connects to	Description
28-38, 40-44	SEG1-16	O	VFD tube anode electrode	VFD tube anode electrode drive output. Directly connected to the VFD tube and no pull-down resistor is required. $I_{OH} > -6$ mA
1-16	COM1-16	O	VFD tube grid electrode	VFD tube grid electrode drive output. Directly connected to the VFD tube and no pull-down resistor is required. $I_{OH} > -30$ mA
26, 27	AD1-2	O	VFD tube anode electrode	VFD tube anode electrode drive output. Directly connected to the VFD tube and no pull-down resistor is required. $I_{OH} > -15$ mA
18, 25	V_{DD}	—	Power supply	The voltage supply between V_{DD} and GND is for the power supply for the internal logic. The voltage supply between V_{DD} and V_{FL} is for the power supply for driving the VFD tube. Apply power to V_{DD} first, then to V_{FL} .
20	GND			
17,39	V_{FL}			
24	DA	I	Microcontroller	Serial data input pin (positive logic). Data is input from the LSB.
23	\overline{CP}	I	Microcontroller	Shift clock input pin. Serial data is shifted in on a rising edge of \overline{CP} .
22	\overline{CS}	I	Microcontroller	Chip select input pin. Serial data transfer is disabled when \overline{CS} pin is "H" level.
21	\overline{RESET}	I	Microcontroller	Reset input. Setting this pin to "Low" initializes all the functions. Initial status is as follows. <ul style="list-style-type: none"> • Address of each RAM..... Address "00"H • Data of each RAM..... Content is undefined • Display digit 16 digits • Brightness adjustment..... 0/16 • All display lights ON or OFF OFF mode • All outputs..... Low level
19	OSC0	I/O	C_1, R_1	Pin for RC oscillation. Resistors and capacitors are connected externally and constants vary depending on the V_{DD} voltage used. The target oscillation frequency is 2MHz.  <p>(RC oscillator circuit) *Refer to the Application Circuit.</p>

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Rating	Unit
Supply Voltage (1)	V _{DD}	—	-0.3 to +6.5	V
Supply Voltage (2)	V _{FL}	—	V _{DD} - 45	V
Input Voltage	V _{IN}	—	-0.3 to V _{DD} +0.3	V
Power Dissipation	P _D	T _a ≥ 25°C	541	mW
Storage Temperature	T _{STG}	—	-55 to +150	°C
Output Current	I _{O1}	COM1-16	-40 to 0.0	mA
	I _{O2}	AD1-2	-20 to 0.0	mA
	I _{O3}	SEG1-16	-10 to 0.0	mA

RECOMMENDED OPERATING CONDITIONS-1

- When the unit power supply voltage is 5.0 V (typ.)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply Voltage (1)	V _{DD}	—	4.5	5.0	5.5	V
Supply Voltage (2)	V _{FL}	—	V _{DD} -42	—	V _{DD} -20	V
High Level Input Voltage	V _{IH}	All input pins except OSC0	0.7 V _{DD}	—	—	V
Low Level Input Voltage	V _{IL}	All input pins except OSC0	—	—	0.3 V _{DD}	V
CP frequency	f _C	—	—	—	2.0	MHz
Self-oscillation frequency	f _{OSC}	R ₁ = 8.2 kΩ±5%, C ₁ = 82 pF±5%	1.4	2.0	2.6	MHz
Frame Frequency	f _{FR}	DIGIT = 1 to 16, R ₁ = 8.2 kΩ±5%, C ₁ = 82 pF±5%	170	244	318	Hz
Operating Temperature	T _{op}	—	-40	—	85	°C

RECOMMENDED OPERATING CONDITIONS-2

- When the unit power supply voltage is 3.3 V (typ.)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply Voltage (1)	V _{DD}	—	3.0	3.3	3.6	V
Supply Voltage (2)	V _{FL}	—	V _{DD} -42	—	V _{DD} -20	V
High Level Input Voltage	V _{IH}	All input pins except OSC0	0.8 V _{DD}	—	—	V
Low Level Input Voltage	V _{IL}	All input pins except OSC0	—	—	0.2 V _{DD}	V
CP frequency	f _C	—	—	—	2.0	MHz
Self-oscillation frequency	f _{OSC}	R ₁ = 6.8 kΩ±5%, C ₁ = 82 pF±5%	1.4	2.0	2.6	MHz
Frame Frequency	f _{FR}	DIGIT = 1 to 16, R ₁ = 6.8 kΩ±5%, C ₁ = 82 pF±5%	170	244	318	Hz
Operating Temperature	T _{op}	—	-40	—	85	°C

ELECTRICAL CHARACTERISTICS**DC Characteristics-1**(V_{DD} = 5.0 V±10%, V_{FL} = V_{DD} - 42 V, Ta = -40 to +85°C, unless otherwise specified)

Parameter	Symbol	Applied pin	Condition	Min.	Max.	Unit

FUNCTIONAL DESCRIPTION

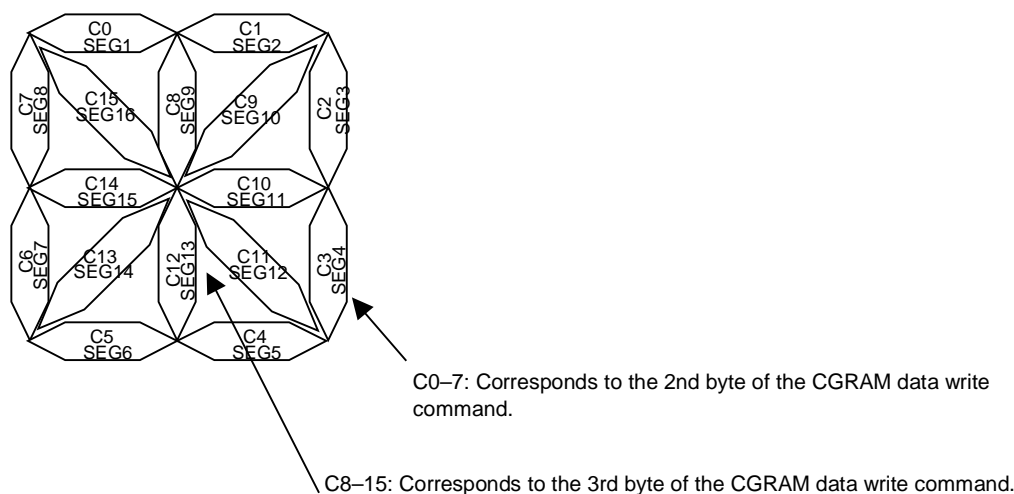

Command List

	Command	First byte								Second byte							
		LSB	First byte							MSB	LSB	Second byte					
		B0	B1	B2	B3	B4	B5	B6	B7	B0	B1	B2	B3	B4	B5	B6	B7
1	DCRAM data write	X0	X1	X2	X3	1	0	0	0	C0	C1	C2	C3	C4	C5	C6	C7
2	CGRAM data write	X0	X1	X2	X3	0	1	0	0	C0	C1	C2	C3	C4	C5	C6	C7
										C8	C9	C10	C11	C12	C13	C14	C15
3	ADRAM data write	X 0	X 1	X 2	X 3	1	1	0	0	C0	C1	*	*	*	*	*	*
5	Display duty set	D0	D1	D2	D3	1	0	1	0								
6	Number of digits set	K0	K1	K2	K3	0	1	1	0	* : Don't care							
7	All display lights ON/OFF	L	H	*	*	1	1	1	0	Xn : Address setting for each RAM							
										Cn : Character code setting for each RAM							
	Others (test mode)									Dn : Display duty setting							
										Kn : Setting of the number of display digits							
										H : All display lights ON setting							
										L : All display lights OFF setting							

When data is written to RAM (DCRAM, CGRAM, and ADRAM) continuously, addresses are internally incremented automatically. Therefore it is not necessary to specify the 1st byte to write RAM data for the 2nd and subsequent bytes.

Note: The test mode is used for inspection before shipment. It is not a user function.

Positional Relationship Between SEGn and ADn (one digit)

Data Transfer Method and Command Write Method

Display control command and data are written by an 8-bit serial transfer. Write timing is shown in the figure below.

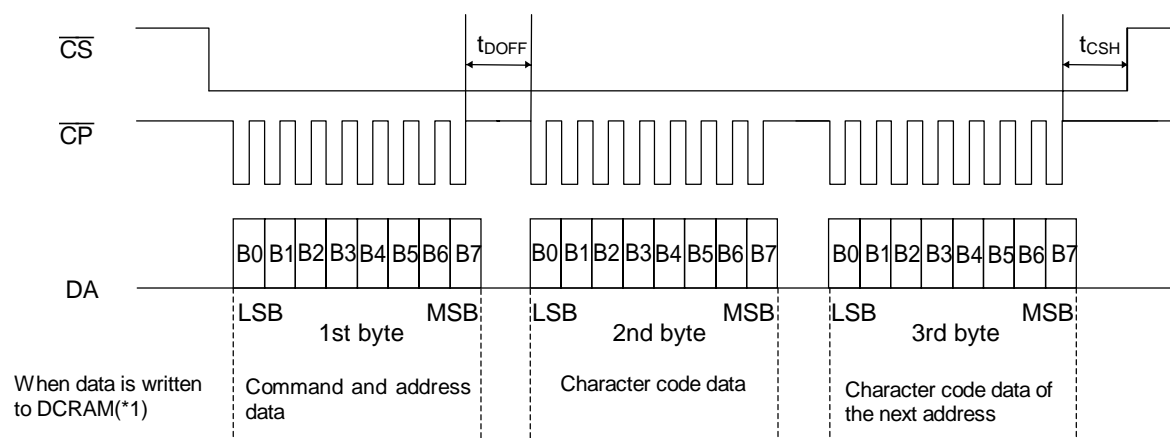

Setting the \overline{CS} pin to “Low” level enables a data transfer.

Data is 8 bits and is sequentially input into the DA pin from LSB (LSB first).

As shown in the figure below, data is read by the shift register at the rising edge of the shift clock, which is input into the \overline{CP} pin. If 8-bit data is input, internal load signals are automatically generated and data is written to each register and RAM.

Therefore it is not necessary to input load signals from the outside.

Setting the \overline{CS} pin to “High” disables data transfer. Data input from the point when the \overline{CS} pin changes from “High” to “Low” is recognized in 8-bit units.

*1 When data is written to RAM (DCRAM, CGRAM, ADRAM) continuously, addresses are internally incremented automatically. Therefore it is not necessary to specify the 1st byte to write RAM data for the 2nd and subsequent bytes.

Reset Function

Reset is executed when the \overline{RESET} pin is set to “L”, (when turning power on, for example) and initializes all functions.

Initial status is as follows.

- Address of each RAM Address 00H
- Data of each RAM All contents are undefined.
- Number of display digits 16 digits
- Brightness adjustment 0/16
- All display lights ON or OFF OFF mode
- Segment output All segment outputs go “Low.”
- AD output All AD outputs go “Low.”

Be sure to execute the reset operation when turning power on and set again according to “Setting Flowchart” after reset.

Description of Commands and Functions

1. "DCRAM data write" command

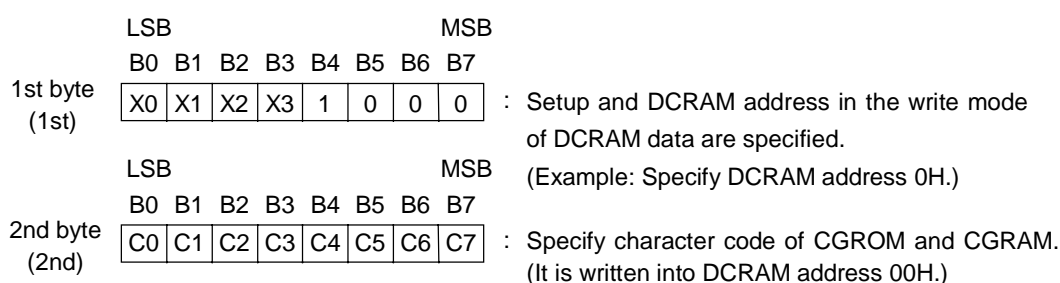

(Specifies the address of DCRAM and writes the character code of CGROM and CGRAM.)

DCRAM (Data Control RAM) has a 4-bit address to store character codes of CGROM and CGRAM.

A character code specified by DCRAM is converted to an alphanumeric character pattern via CGROM or CGRAM.

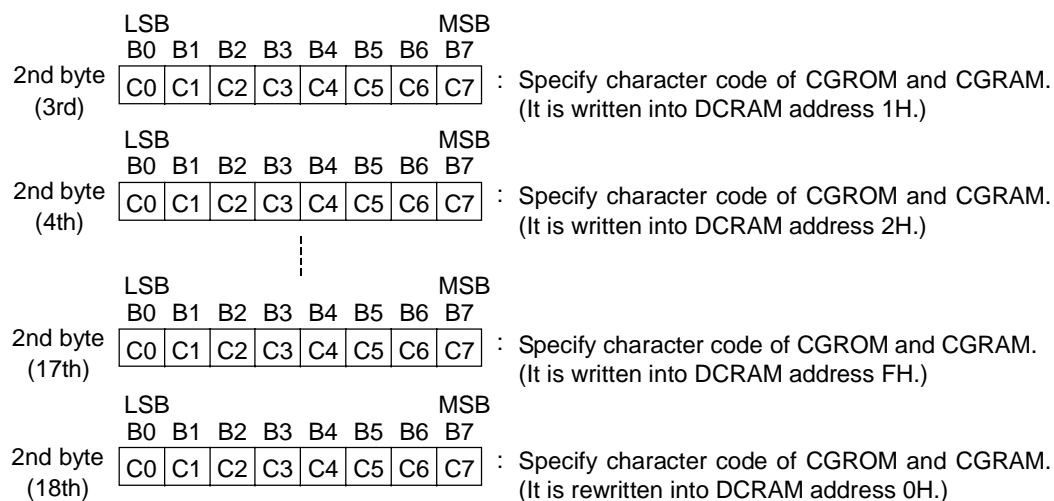

The DCRAM can store 16 characters worth of character codes.

[Command format]

To specify the character code of CGROM and CGRAM to the next address continuously, specify only character code as follows.

Since the address of DCRAM is automatically incremented, address specification is unnecessary.

X0 (LSB) to X3 (MSB): DCRAM address (4 bits: 16 characters worth)

C0 (LSB) to C7 (MSB): Character code of CGROM and CGRAM (8 bits: 256 characters worth)

[Relationship between DCRAM addresses setup and COM positions]

HEX	X0	X1	X2	X3	COM position	HEX	X0	X1	X2	X3	COM position
0	0	0	0	0	COM1	8	0	0	0	1	COM9
1	1	0	0	0	COM2	9	1	0	0	1	COM10
2	0	1	0	0	COM3	A	0	1	0	1	COM11
3	1	1	1	0	COM4	B	1	1	0	1	COM12
4	0	0	1	0	COM5	C	0	0	1	1	COM13
5	1	0	1	0	COM6	D	1	0	1	1	COM14
6	0	1	1	0	COM7	E	0	1	1	1	COM15
7	1	1	1	0	COM8	F	1	1	1	1	COM16

2. "CGRAM data write" command

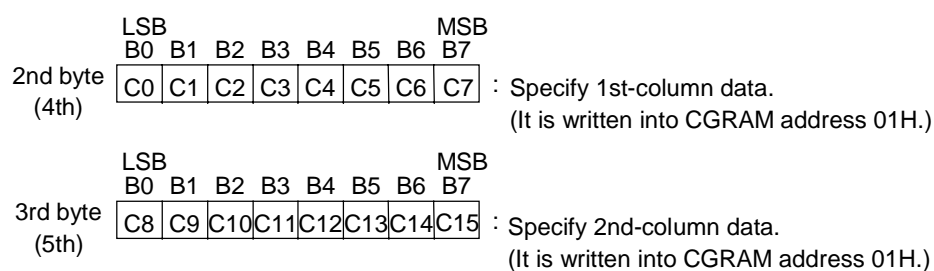

(Specifies the address of CGRAM and writes character pattern data.)

CGRAM (Character Generator RAM) has a 4-bit address to store alphanumeric character patterns. A character pattern stored in CGRAM can be displayed by specifying the character code (address) by DCRAM. The addresses of CGRAM are assigned to 00H to 0FH (All the other addresses are the CGROM addresses). The CGRAM can store 16 types of character patterns.

[Command format]

To specify character pattern data continuously to the next address, specify only character pattern data as follows. Since the address of CGRAM is automatically incremented, address specification is unnecessary. Data from the 2nd to 6th byte (character pattern) is regarded as one data item taken together, so 250 ns is sufficient for t_{DOFF} time between bytes.

X0 (LSB) to X3 (MSB): CGRAM address (4 bits: 16 characters worth)
 C0 (LSB) to C15 (MSB): Character data of CGRAM (16 bits: 16 outputs per digit)

[Positional relationship between CGRAM addresses setup and CGROM addresses]

HEX	X0	X1	X2	X3	CGROM address	HEX	X0	X1	X2	X3	CGROM address
0	0	0	0	0	RAM00	8	0	0	0	1	RAM08
1	1	0	0	0	RAM01	9	1	0	0	1	RAM09
2	0	1	0	0	RAM02	A	0	1	0	1	RAM0A
3	1	1	1	0	RAM03	B	1	1	0	1	RAM0B
4	0	0	1	0	RAM04	C	0	0	1	1	RAM0C
5	1	0	1	0	RAM05	D	1	0	1	1	RAM0D
6	0	1	1	0	RAM06	E	0	1	1	1	RAM0E
7	1	1	1	0	RAM07	F	1	1	1	1	RAM0F

Refer to the ROM Code Tables attached later in this document.

Positional Relationship Between CGROM and CGRAM outputs

*On CGROM

A CGROM (Character Generator ROM) has an 8-bit address to generate alphanumeric type matrix character patterns.

It has a capacity of 240 x 16 bits and can store 240 types of character patterns.

3. “ADRAM data write” command

(Specifies the address of ADRAM and writes symbol data)

ADRAM (Additional Data RAM) has a 2-bit address to store symbol data.
 Symbol data specified by ADRAM is directly output without CGROM and CGRAM.
 (The ADRAM can store two types of symbol patterns for each digit.)
 The terminal to which the contents of ADRAM are output can be used as a cursor.

[Command format]

	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
1st byte (1st)	X0	X1	X2	X3	1	1	0	0	: Setup and DCRAM address in the write-in mode of DCRAM data are specified. (Example: Specify ADRAM address 0H.)
	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
2nd byte (2nd)	C0	C1	*	*	*	*	*	*	: Specify symbol data. (Example: Specify ADRAM address 0H.)

To specify symbol data continuously to the next address, specify only symbol data as follows.
 Since the address of ADRAM is automatically incremented, address specification is unnecessary.

	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
2nd byte (3rd)	C0	C1	*	*	*	*	*	*	: Specify symbol data. (It is written into ADRAM address 1H.)
	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
2nd byte (4th)	C0	C1	*	*	*	*	*	*	: Specify symbol data. (It is written into ADRAM address 2H.)
				⋮					
	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
2nd byte (17th)	C0	C1	*	*	*	*	*	*	: Specify symbol data. (It is written into ADRAM address FH.)
	LSB				MSB				
	B0	B1	B2	B3	B4	B5	B6	B7	
2nd byte (18th)	C0	C1	*	*	*	*	*	*	: Specify symbol data. (It is rewritten into ADRAM address 0H.)

X0 (LSB) to X3 (MSB) : ADRAM address (4 bits: 16 characters worth)

C0 (LSB) to C1 (MSB) : Symbol data (2 bits: 2 symbols per digit)

* : Don't care

[Relationship between ADRAM addresses setup and COM positions]

HEX	X0	X1	X2	X3	COM positions	HEX	X0	X1	X2	X3	COM positions
0	0	0	0	0	COM1	8	0	0	0	1	COM9
1	1	0	0	0	COM2	9	1	0	0	1	COM10
2	0	1	0	0	COM3	A	0	1	0	1	COM11
3	1	1	1	0	COM4	B	1	1	0	1	COM12
4	0	0	1	0	COM5	C	0	0	1	1	COM13
5	1	0	1	0	COM6	D	1	0	1	1	COM14
6	0	1	1	0	COM7	E	0	1	1	1	COM15
7	1	1	1	0	COM8	F	1	1	1	1	COM16

5. “Display duty set” command
(Writes display duty value into the duty cycle register.)

For display duty, brightness can be adjusted in 16 stages using 4-bit data.

When power is turned on or when the $\overline{\text{RESET}}$ signal is input, the duty cycle register value is “0”. Always execute this command before turning the display on, then set a desired duty value.

[Command format]

1st byte

	LSB					MSB			
	B0	B1	B2	B3	B4	B5	B6	B7	
	D0	D1	D2	D3	1	0	1	0	

: setup and duty value in display duty specification mode are specified.

D0 (LSB) to D3 (MSB) : Display duty data (4 bits: 16 stages worth)

[Relation between setup data and controlled COM duty]

HEX	D0	D1	D2	D3	COM duty	HEX	D0	D1	D2	D3	COM duty
0	0	0	0	0	0/16	0	0	0	0	1	8/16
1	1	0	0	0	1/16	1	1	0	0	1	9/16
2	0	1	0	0	2/16	2	0	1	0	1	10/16
3	1	1	0	0	3/16	3	1	1	0	1	11/16
4	0	0	1	0	4/16	4	0	0	1	1	12/16
5	1	0	1	0	5/16	5	1	0	1	1	13/16
6	0	1	1	0	6/16	6	0	1	1	1	14/16
7	1	1	1	0	7/16	7	1	1	1	1	15/16

* The state when power is turned on or when the $\overline{\text{RESET}}$ signal is input.

6. "Number of display digits set" command

(Writes the number of display digits into the number-of-display-digits register.)

For the number of display digits, 1 to 16 digits can be specified using 4-bit data.

When power is turned on or when a $\overline{\text{RESET}}$ signal is input, the number-of-display-digits register value is "0". Always execute this command before turning the display on, then set a desired value.

[Command format]

	LSB							MSB	
	B0	B1	B2	B3	B4	B5	B6	B7	
1st byte	K0	K1	K2	K3	0	1	1	0	: Setup in display digits specification mode and digits value is specified.

K0 (LSB) to K3 (MSB) : Data of the number of display digits (4 bits: 16 digits worth)

[Relation between data to be set and the number of digits of COM to be controlled]

HEX	D0	D1	D2	D3	No. of digits of COM	HEX	D0	D1	D2	D3	No. of digits of COM
0	0	0	0	0	COM1-16	0	0	0	0	1	COM1-18
1	1	0	0	0	COM1	1	1	0	0	1	COM1-9
2	0	1	0	0	COM1-2	2	0	1	0	1	COM1-10
3	1	1	0	0	COM1-3	3	1	1	0	1	COM1-11
4	0	0	1	0	COM1-4	4	0	0	1	1	COM1-12
5	1	0	1	0	COM1-5	5	1	0	1	1	COM1-13
6	0	1	1	0	COM1-6	6	0	1	1	1	COM1-14

* The state when power is turned on or when the $\overline{\text{RESET}}$ signal is input.

7. “All display lights ON” and “All display lights OFF” commands
(Turns the entire display ON and OFF, respectively.)

All display lights ON is used primarily for display testing.

All display lights OFF is primarily used for display blink and to prevent false display upon power-on.

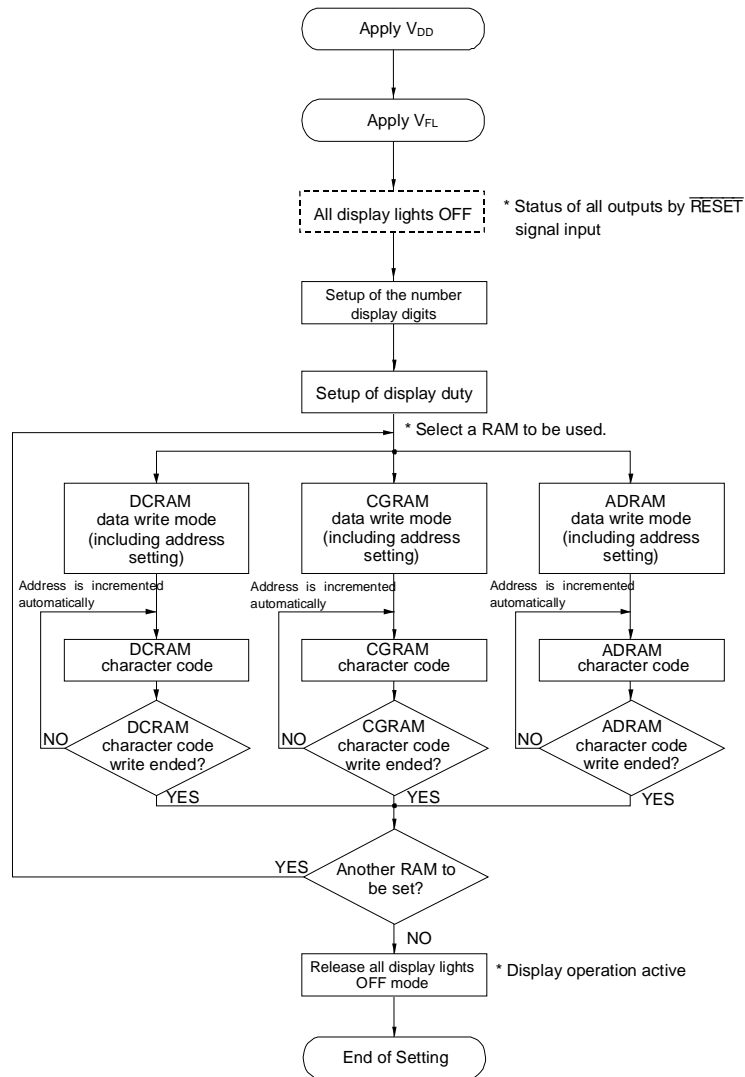

[Command format]

	LSB							MSB	
	B0	B1	B2	B3	B4	B5	B6	B7	
1st byte	L	H	*	*	1	1	1	0	: Select all display lights ON or OFF and specify their operation.
	L: All display lights OFF								
	H: All display lights ON								
	*: Don't Care								

[Data to be setup and display state of SEG and AD]

L	H	Display state of SEG and AD	
0	0	Normal display	
1	0	Sets all outputs to Low	* The state when power is turned on or when $\overline{\text{RESET}}$ signal is input
0	1	Sets all outputs to High	
1	1	Sets all outputs to High	* Priority is given to the All display lights ON command.

**Setting Flowchart
(Power applying included)**

Power-off Flowchart

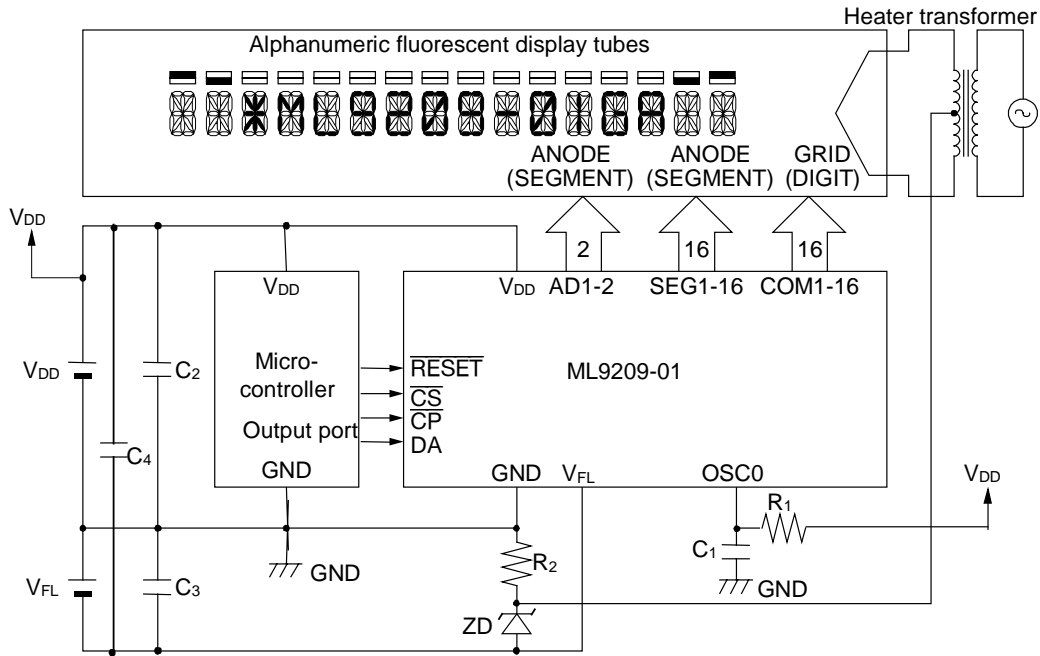

NOTE ON APPLYING POWER

To prevent the IC from malfunctioning, turn on the logic power supply first, and then turn on the driver power supply when applying power. Also, for power-off, turn off the driver power supply first, then turn off the logic power supply.

APPLICATION CIRCUIT

Notes:

1. The V_{DD} voltage depends on the power supply voltage of the microcontroller used. Adjust the value of the constants R_1 and C_1 to the power supply voltage used.
2. The V_{FL} voltage depends on the vacuum fluorescent display tube used. Adjust the value of the constants R_2 and ZD to the voltage used.

Reference data

Shown below is a chart showing the V_{FL} voltage vs. output current of each driver. Care must be taken that the entire power consumption will not exceed the power dissipation.

V_{FL} Voltage vs. Output Current of Each Driver

ML9209-01 ROM CODE

*ROM CODE_A is the character set for SEGA1 to SEGA16.

*00000000b(00h) to 00001111b(0Fh) are the CGRAM_A addresses

PACKAGE DIMENSIONS

(Unit: mm)

Notes for Mounting the Surface Mount Type Package

The surface mount type packages are very susceptible to heat in reflow mounting and humidity absorbed in storage.

Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

NOTICE

1. The information contained herein can change without notice owing to product and/or technical improvements. Before using the product, please make sure that the information being referred to is up-to-date.
2. The outline of action and examples for application circuits described herein have been chosen as an explanation for the standard action and performance of the product. When planning to use the product, please ensure that the external conditions are reflected in the actual circuit, assembly, and program designs.
3. When designing your product, please use our product below the specified maximum ratings and within the specified operating ranges including, but not limited to, operating voltage, power dissipation, and operating temperature.
4. Oki assumes no responsibility or liability whatsoever for any failure or unusual or unexpected operation resulting from misuse, neglect, improper installation, repair, alteration or accident, improper handling, or unusual physical or electrical stress including, but not limited to, exposure to parameters beyond the specified maximum ratings or operation outside the specified operating range.
5. Neither indemnity against nor license of a third party's industrial and intellectual property right, etc. is granted by us in connection with the use of the product and/or the information and drawings contained herein. No responsibility is assumed by us for any infringement of a third party's right which may result from the use thereof.
6. The products listed in this document are intended for use in general electronics equipment for commercial applications (e.g., office automation, communication equipment, measurement equipment, consumer electronics, etc.). These products are not, unless specifically authorized by Oki, authorized for use in any system or application that requires special or enhanced quality and reliability characteristics nor in any system or application where the failure of such system or application may result in the loss or damage of property, or death or injury to humans.
Such applications include, but are not limited to, traffic and automotive equipment, safety devices, aerospace equipment, nuclear power control, medical equipment, and life-support systems.
7. Certain products in this document may need government approval before they can be exported to particular countries. The purchaser assumes the responsibility of determining the legality of export of these products and will take appropriate and necessary steps at their own expense for these.
8. No part of the contents contained herein may be reprinted or reproduced without our prior permission.
