

- Ideal for 265.00 MHz Transmitters
- Very Low Insertion Loss
- Quartz Stability
- Rugged, Hermetic, Low Profile TO-39 Package

**SR265** 

| Absolute Maximum Rating (Ta=25°C) |              |           |      |  |  |  |
|-----------------------------------|--------------|-----------|------|--|--|--|
| Parameter                         |              | Rating    | Unit |  |  |  |
| CW RF Power Dissipation           | Р            | 0         | dBm  |  |  |  |
| DC Voltage                        | $V_{DC}$     | ±30       | V    |  |  |  |
| Operating Temperature Range       | $T_{A}$      | -10 ~ +60 | °C   |  |  |  |
| Storage Temperature Range         | $T_{ m stg}$ | -40 ~ +85 | °C   |  |  |  |

| Electronic Characteristics                    |                                      |                |         |          |         |         |

NS = Not Specified

### Notes:

- 1. The center frequency,  $f_{\text{C}_{\text{I}}}$  is measured at the minimum IL point with the resonator in the 50 $\Omega$  test system.
- 2. Unless noted otherwise, case temperature  $T_C = +25$ °C  $\pm$  2°C.
- 3. Frequency aging is the change in  $f_C$  with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature, T<sub>0</sub>, is the temperature of maximum (or turnover) frequency, f<sub>0</sub>. The nominal frequency at any case temperature, T<sub>C</sub>, may be calculated from: f = f<sub>0</sub> [1 - FTC (T<sub>0</sub> - T<sub>C</sub>)<sup>2</sup>].
- 5. This equivalent RLC model approximates resonator performance near the resonant frequency and is provided for reference only. The capacitance C<sub>0</sub> is the measured static (nonmotional) capacitance between Pin1 and Pin2. The measurement includes case parasitic capacitance.

- 6. Derived mathematically from one or more of the following directly measured parameters:  $f_C$ , IL, 3 dB bandwidth,  $f_C$  versus  $T_C$ , and  $C_0$ .
- 7. The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- For questions on technology, prices and delivery please contact our sales offices or e-mail to sales@vanlong.com.

## Package Dimensions (TO-39)

### Marking

Ink Marking Color: Black or Blue

## **Typical Application Circuit**

Low Power Transmitter Application

# **Typical Frequency Response**

#### **Electrical Connections**

| Terminals | Connection    |  |  |
|-----------|---------------|--|--|
| 1         | Input/ Output |  |  |
| 2         | Output/ Input |  |  |
| 3         | Case-Ground   |  |  |

#### **Package Dimensions**

| Dimensions | Nom (mm)     |       |  |  |
|------------|--------------|-------|--|--|
|            | Min          | Max   |  |  |
| Α          | 9.10         | 9.50  |  |  |
| В          | 3.20         | 3.60  |  |  |
| С          | 2.80         | 3.20  |  |  |
| D          | Ф0.25        | Ф0.65 |  |  |
| E          | 4.98         | 5.18  |  |  |
| F          | 2.54 Nominal |       |  |  |
| G          | 0.4          | 0.5   |  |  |

## **Equivalent LC Model and Test Circuit**

## Local Oscillator Application

# **Temperature Characteristics**

$$\Delta T = Tc - To (°C)$$

The curve shown above accounts for resonator contribution only and does not include oscillator temperature characteristics.
