# 500 WATT ULTRA LOW CAPACITANCE STEERING DIODE/TVS ARRAY

## DESCRIPTION

The PSR05LC is an ultra low capacitance steering diode TVS array, designed to protect two I/O lines from the effects of Electrostatic Discharge (ESD) and Electrical Fast Transients (EFT). The PSR05 provides ESD protection up to 25 kilovolts. The PSR05LC has a peak pulse power rating of 500 Watts for an 8/20µs waveshape.

The low capacitance of the steering diode allows the designer to protect high speed data applications. The small SOT-143 package, with four leads reduces the internal lead inductance for low overshoot voltage during fast front time transient events, such as ESD. The PSR05LC meets the IEC 61000-4-2 and IEC 61000-4-4 requirements.

#### APPLICATION INFORMATION

## **FIGURE 1 - USB PROTECTION**

- Pins 2 and 3 are connected to the datalines
- Pin 1 is connected to ground
- Pin 4 is connected to the databus

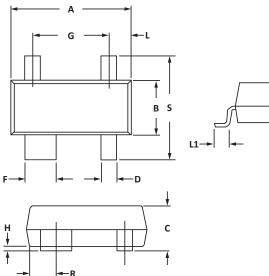

## **CIRCUIT BOARD RECOMMENDATIONS**

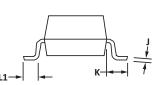

Circuit board layout is critical for electromagnetic compatibility protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- Ground planes should be used whenever possible. For multilayer PCBs, use dedicated ground planes.
