# $\pm 60 \mathrm{~V}$ AC Switch <br> with Current Fold-Back Protection 

## Features

- Up to $\pm 60 \mathrm{~V}$ input voltage protection
- Low on resistance $-4.0 \Omega$ typical
- Current fold-back protection
- No external power supplies needed
- Simple 3-pin SOT-89 package

## Applications

- Solenoid valve control
- AC relay control
- Relay replacement
- Resettable fuse

## General Description

The Supertex FP0060 is a low voltage AC switch with current fold-back protection. It is designed to be used as an AC low side switch.

The FP0060 has a maximum switch resistance of $5.0 \Omega$. The switch can be controlled by an enable pin, EN. The enable pin is designed for 12 V CMOS logic input. When EN is low, the switch is open. When EN is high, the switch is closed. In the open state, the device can withstand up to $\pm 60 \mathrm{~V}$. This enables users to control 24VAC lines with 12 V logic.

The FP0060 has built-in current fold-back. If the load is shorted, the FP0060 will detect a high current condition and will quickly turn-off the switch. The switch will automatically turn back on when the short is removed.

The FP0060 does not have a DC power supply pin. It operates from the EN pin. This allows the device to be packaged in an economical 3-pin SOT-89 package.

## Typical Application Circuit

Ordering Information

| Part Number | Package | Packing |
| :--- | :--- | :--- |
| FP0060N8-G | 3-Lead TO-243AA (SOT-89) | 2000/Reel |

-G indicates package is RoHS compliant ('Green’)

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\text {AC-IN }}$, Maximum input voltage | -70 V to +70 V |
| Maximum input voltage for EN | +15 V |
| Maximum junction temperature | $+125^{\circ} \mathrm{C}$ |
| Operating temperature | $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ |
| Storage temperature range | $-65^{\circ}$ to $+150^{\circ} \mathrm{C}$ |
| Power dissipation, $\mathrm{T}_{\mathrm{A}} @ 25^{\circ} \mathrm{C}$ | $1.6 \mathrm{~W}{ }^{1}$ |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.
Note:

1. Mounted on FR4 board, $25 \mathrm{~mm} \times 25 \mathrm{~mm} \times 1.57 \mathrm{~mm}$.

## Typical Thermal Resistance

| Package | $\boldsymbol{\theta}_{\boldsymbol{j}}$ |
| :--- | :--- |
| 3-Lead TO-243AA (SOT-89) | $173^{\circ} \mathrm{C} / \mathrm{W}$ |

## Pin Configuration

TO-243AA (SOT-89) (N8)

## Product Marking

Y = Code for year sealed W = Code for week sealed ___ = "Green" Packaging

Package may or may not include the following marks: Si or $4 i$
TO-243AA (SOT-89) (N8)

Electrical Characteristics ( $T_{=}=25^{\circ} \mathrm{C}$ unless otherwise specified)

## Block Diagram

## Typical I-V Characteristics (ON-state)

## Test Circuit

## Waveform: Solenoid not shorted

## Waveform: Solenoid shorted

Channel 1: EN signal 0 to 12 V logic input turning the solenoid on and off.

Channel 2: Voltage on ACIN pin. When off, the full AC voltage is seen on ACIN. When on, only about 2 V drop due to IR drops.

Channel 3: Voltage across a $1.0 \Omega$ resistor. Sees the expected pull-in current of 700 mA then 400 mA peaks.

Enable from low to high into a shorted solenoid.

Peak currents of about $\pm 1.0 \mathrm{~A}$. See inductive boosting action due to FP0060 turning off.

## Pin Description

| Pin Name | Description |
| :---: | :--- |
| EN | Enable pin. Logic high turns on the switch. |
| GND | Ground. Device ground. |
| ACIN | AC voltage input. Connect to load. |
