TECHNICAL DATA SHEET

RayMark Six labels

MATERIAL DESCRIPTION:	Computer-printable zero halogen label material. Permanent pressure sensitive acrylic adhesive. Thermally stabilised white polyester film with special ink receptive latent cure epoxy coating on the label surface. After printing, the surface is heat cured, embedding the image within a tough polymeric layer.
USE:	RayMark Six labels have outstanding abrasion and fluid resistance without the need for an overlay. Ideal for applications where high performance variable data labels are needed, for example in defence, marine, rail and aerospace applications. Can be used as a wire/cable wraparound marker for substrates not less than 6mm (0.25 inches) diameter. Not recommended for outdoor use.
PRINT METHOD/RIBBON:	Dot Matrix: Tyco LQ870, Tyco TMS-SYSTEM-SIX-RIBBON-A.
CURING CONDITIONS:	5 minutes at 150°C (302°F) in an air circulating oven. Small curing unit with automatic drive available ("Permatizer"). Curing also possible with hot air gun. Contact Tyco for details.
SHELF LIFE/STORAGE CONDITIONS:	Can be stored unopened for 12 months at temperatures not exceeding 35°C (95°F). Once opened, product should be stored below 25°C (77°F) and 80% relative humidity and used within 6 months.
SERVICE TEMPERATURE:	Wiring marking: -40°C to +85°C (-40°F to +185°F) continuous. Panel marking: -40°C to +105° (-40°F to +221°F) continuous.
	Excursion Temperature: 200°C (392°F) for 2 hours.
INSTALLATION TEMP:	+10°C to +40°C (+50°F to +104°F).
COLORS:	White.
