F²MC-16LX MB90595/595G Series

MB90598/F598/F598G/V595/V595G

■ DESCRIPTION

The MB90595/595G series with FULL-CAN*¹ interface and FLASH ROM is especially designed for automotive and industrial applications. Its main features are two on board CAN Interfaces, which conform to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach.

The instruction set of F²MC-16LX CPU core inherits an AT architecture of the F²MC*² family with additional instruction sets for high-level languages, extended addressing mode, enhanced multiplication/division instructions, and enhanced bit manipulation instructions. The microcontroller has a 32-bit accumulator for processing long word data.

The MB90595/595G series has peripheral resources of 8/10-bit A/D converters, UART (SCI), extended I/O serial interface, 8/16-bit PPG timer, I/O timer (input capture (ICU), output compare (OCU)) and stepping motor controller.

*1: Controller Area Network (CAN) - License of Robert Bosch GmbH

*2: F²MC stands for FUJITSU Flexible Microcontroller.

■ FEATURES

- Clock

Embedded PLL clock multiplication circuit

Operating clock (PLL clock) can be selected from divided-by-2 of oscillation or one to four times the oscillation (at oscillation of 4 MHz, 4 MHz to 16 MHz).

Minimum instruction execution time: 62.5 ns (operation at oscillation of 4 MHz, four times the oscillation clock, V_{CC} of 5.0 V)

(Continued)

■ PACKAGE

100-pin Plastic QFP

(FPT-100P-M06)

MB90595/595G Series

(Continued)

- Instruction set to optimize controller applications
 - Rich data types (bit, byte, word, long word)
 - Rich addressing mode (23 types)
 - Enhanced signed multiplication/division instruction and RETI instruction functions
 - Enhanced precision calculation realized by the 32-bit accumulator
- Instruction set designed for high level language (C language) and multi-task operations
 - Adoption of system stack pointer
 - Enhanced pointer indirect instructions
 - Barrel shift instructions
- Program patch function (for two address pointers)
- Enhanced execution speed: 4-byte instruction queue
- Enhanced interrupt function: 8 levels, 34 factors
- Automatic data transmission function independent of CPU operation
 - Extended intelligent I/O service function (EI²OS): Up to 10 channels
- Embedded ROM size and types
 - Mask ROM: 128 Kbytes
 - Flash ROM: 128 Kbytes
 - Embedded RAM size: 4 Kbytes (MB90V595/595G : 6 Kbytes)
- Flash ROM
 - Supports automatic programming, Embedded Algorithm ™*
 - Write/Erase/Erase-Suspend/Resume commands
 - A flag indicating completion of the algorithm
 - Hard-wired reset vector available in order to point to a fixed boot sector
 - Erase can be performed on each block
 - Block protection with external programming voltage
- Low-power consumption (stand-by) mode
 - Sleep mode (mode in which CPU operating clock is stopped)
 - Stop mode (mode in which oscillation is stopped)
 - CPU intermittent operation mode
 - Hardware stand-by mode
- Process: 0.5 μm CMOS technology
- I/O port
 - General-purpose I/O ports: 78 ports
 - Push-pull output and Schmitt trigger input.
 - Programmable on each bit as I/O or signal for peripherals.
- Timer
 - Watchdog timer: 1 channel
 - 8/16-bit PPG timer: 8/16-bit × 6 channels
 - 16-bit re-load timer: 2 channels
- 16-bit I/O timer
 - Input capture: 4 channels
 - Output compare: 4 channels
- Extended I/O serial interface: 1 channel
- UART0
 - With full-duplex double buffer (8-bit length)
 - Clock asynchronous or clock synchronized (with start/stop bit) transmission can be selectively used.

- UART1 (SCI)
With full-duplex double buffer (8-bit length)
Clock asynchronized or clock synchronized serial transmission (I/O extended transmission) can be selectively used.
- Stepping motor controller (4 channels)
- External interrupt circuit (8 channels)
A module for starting an extended intelligent I/O service (EI²OS) and generating an external interrupt which is triggered by an external input.
- Delayed interrupt generation module: Generates an interrupt request for switching tasks.
- 8/10-bit A/D converter (8 channels)
8/10-bit resolution can be selectively used.
Starting by an external trigger input.
- FULL-CAN interface: 1 channel
Conforming to Version 2.0 Part A and Part B
Flexible message buffering (mailbox and FIFO buffering can be mixed)
- 18-bit Time-base counter
- External bus interface: Maximum address space 16 Mbytes

MB90595/595G Series

■ PRODUCT LINEUP

Features		MB90598	MB90F598/F598G	MB90V595/V595G
Classification		Mask ROM product	Flash ROM product	Evaluation product
ROM size		128 Kbytes	128 Kbytes Boot block Hard-wired reset vector	None
RAM size		4 Kbytes	4 Kbytes	6 Kbytes
Emulator-specific power supply *1		—		None
CPU functions		The number of instructions: 351 Instruction bit length: 8 bits, 16 bits Instruction length: 1 byte to 7 bytes Data bit length: 1 bit, 8 bits, 16 bits Minimum execution time: 62.5 ns (at machine clock frequency of 16 MHz) Interrupt processing time: 1.5 μs (at machine clock frequency of 16 MHz, minimum value)		
UART0		Clock synchronized transmission (500 K/1 M/2 Mbps) Clock asynchronized transmission (4808/5208/9615/10417/19230/38460/62500 /500000 bps at machine clock frequency of 16 MHz) Transmission can be performed by bi-directional serial transmission or by master/slave connection.		
UART1(SCI)		Clock synchronized transmission (62.5 K/125 K/250 K/500 K/1 Mbps) Clock asynchronized transmission (1202/2404/4808/9615/31250 bps) Transmission can be performed by bi-directional serial transmission or by master/slave connection.		
8/10-bit A/D converter		Conversion precision: 8/10-bit can be selectively used. Number of inputs: 8 One-shot conversion mode (converts selected channel once only) Scan conversion mode (converts two or more successive channels and can program up to 8 channels) Continuous conversion mode (converts selected channel continuously) Stop conversion mode (converts selected channel and stop operation repeatedly)		
8/16-bit PPG timers (6 channels)		Number of channels: 6 (8/16-bit × 6 channels) PPG operation of 8-bit or 16-bit A pulse wave of given intervals and given duty ratios can be output. Pulse interval: f_{sys} , $f_{sys}/2^1$, $f_{sys}/2^2$, $f_{sys}/2^3$, $f_{sys}/2^4$ (f_{sys} = system clock frequency) 128μs (f_{osc} = 4MHz : oscillation clock frequency)		
16-bit Reload timer		Number of channels: 2 Operation clock frequency: $f_{sys}/2^1$, $f_{sys}/2^3$, $f_{sys}/2^5$ (f_{sys} = System clock frequency) Supports External Event Count function		
16-bit I/O timer	16-bit Output compares	Number of channels: 4 Pin input factor: A match signal of compare register		
	Input captures	Number of channels: 4 Rewriting a register value upon a pin input (rising, falling, or both edges)

(Continued)

Features	MB90598	MB90F598/F598G	MB90V595/V595G
CAN Interface	Number of channels: 1 Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID's Supports multiple messages Flexible configuration of acceptance filtering: Full bit compare / Full bit mask / Two partial bit masks Supports up to 1Mbps CAN bit timing setting: MB90xxx:TSEG2 \geq RSJW+2TQ MB90xxxG:TSEG2 \geq RSJW		
Stepping motor controller (4 channels)	Four high current outputs for each channel Synchronized two 8-bit PWM's for each channel		
External interrupt circuit	Number of inputs: 8 Started by a rising edge, a falling edge, an "H" level input, or an "L" level input.		
Serial IO	Clock synchronized transmission (31.25 K/62.5 K/125 K/500 K/1 Mbps at system clock frequency of 16 MHz) LSB first/MSB first		
Watchdog timer	Reset generation interval: 3.58 ms, 14.33 ms, 57.23 ms, 458.75 ms (at oscillation of 4 MHz, minimum value)		
Flash Memory	Supports automatic programming, Embedded Algorithm™ and Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Hard-wired reset vector available in order to point to a fixed boot sector in Flash Memory Boot block configuration Erase can be performed on each block Block protection with external programming voltage Flash Writer from Minato Electronics Inc.		
Low-power consumption (stand-by) mode	Sleep/stop/CPU intermittent operation/clock timer/hardware stand-by		
Process	CMOS		
Power supply voltage for operation*2	+5 V \pm 10 %		
Package	QFP-100		PGA-256

*1: It is setting of DIP switch S2 when Emulation pod (MB2145-507) is used.

Please refer to the MB2145-507 hardware manual (2.7 Emulator-specific Power Pin) about details.

*2: Varies with conditions such as the operating frequency. (See section "■ Electrical Characteristics.")

MB90595/595G Series

PIN ASSIGNMENT

■ PIN DESCRIPTION

Pin no.	Pin name	Circuit type	Function
82	X0	A	Oscillator pin
83	X1		
77	$\overline{\text{RST}}$	B	Reset input
52	$\overline{\text{HST}}$	C	Hardware standby input
85 to 88	P00 to P03	G	General purpose IO
	IN0 to IN3		Inputs for the Input Captures
89 to 92	P04 to P07	G	General purpose IO
	OUT0 to OUT3		Outputs for the Output Compares.
93 to 98	P10 to P15	D	General purpose IO
	PPG0 to PPG5		Outputs for the Programmable Pulse Generators
99	P16	D	General purpose IO
	TIN1		TIN input for the 16-bit Reload Timer 1
100	P17	D	General purpose IO
	TOT1		TOT output for the 16-bit Reload Timer 1
1 to 8	P20 to P27	G	General purpose IO
9 to 10	P30 to P31	G	General purpose IO
12 to 16	P32 to P36	G	General purpose IO
17	P37	D	General purpose IO
18	P40	G	General purpose IO
	SOT0		SOT output for UART 0
19	P41	G	General purpose IO
	SCK0		SCK input/output for UART 0
20	P42	G	General purpose IO
	SIN0		SIN input for UART 0
21	P43	G	General purpose IO
	SIN1		SIN input for UART 1
22	P44	G	General purpose IO
	SCK1		SCK input/output for UART 1
24	P45	G	General purpose IO
	SOT1		SOT output for UART 1
25	P46	G	General purpose IO
	SOT2		SOT output for the Serial IO
26	P47	G	General purpose IO
	SCK2		SCK input/output for the Serial IO

(Continued)

MB90595/595G Series

Pin no.	Pin name	Circuit type	Function
28	P50	D	General purpose IO
	SIN2		SIN Input for the Serial IO
29 to 32	P51 to P54	D	General purpose IO
	INT4 to INT7		External interrupt input for INT4 to INT7
33	P55	D	General purpose IO
	ADTG		Input for the external trigger of the A/D Converter
38 to 41	P60 to P63	E	General purpose IO
	AN0 to AN3		Inputs for the A/D Converter
43 to 46	P64 to P67	E	General purpose IO
	AN4 to AN7		Inputs for the A/D Converter
47	P56	D	General purpose IO
	TIN0		TIN input for the 16-bit Reload Timer 0
48	P57	D	General purpose IO
	TOT0		TOT output for the 16-bit Reload Timer 0
54 to 57	P70 to P73	F	General purpose IO
	PWM1P0 PWM1M0 PWM2P0 PWM2M0		Output for Stepper Motor Controller channel 0
59 to 62	P74 to P77	F	General purpose IO
	PWM1P1 PWM1M1 PWM2P1 PWM2M1		Output for Stepper Motor Controller channel 1
64 to 67	P80 to P83	F	General purpose IO
	PWM1P2 PWM1M2 PWM2P2 PWM2M2		Output for Stepper Motor Controller channel 2
69 to 72	P84 to P87	F	General purpose IO
	PWM1P3 PWM1M3 PWM2P3 PWM2M3		Output for Stepper Motor Controller channel 3
74	P90	D	General purpose IO
	TX		TX output for CAN Interface
75	P91	D	General purpose IO
	RX		RX input for CAN Interface

(Continued)

MB90595/595G Series

(Continued)

Pin no.	Pin name	Circuit type	Function
76	P92	D	General purpose IO
	INT0		External interrupt input for INT0
78 to 80	P93 to P95	D	General purpose IO
	INT1 to INT3		External interrupt input for INT1 to INT3
58, 68	DV _{CC}	—	Dedicated power supply pins for the high current output buffers (Pin No. 54 to 72)
53, 63, 73	DV _{SS}	—	Dedicated ground pins for the high current output buffers (Pin No. 54 to 72)
34	AV _{CC}	Power supply	Dedicated power supply pin for the A/D Converter
37	AV _{SS}	Power supply	Dedicated ground pin for the A/D Converter
35	AVRH	Power supply	Upper reference voltage input for the A/D Converter
36	AVRL	Power supply	Lower reference voltage input for the A/D Converter
49, 50	MD0 MD1	C	Operating mode selection input pins. These pins should be connected to V _{CC} or V _{SS} .
51	MD2	H	Operating mode selection input pin. This pin should be connected to V _{CC} or V _{SS} .
27	C	—	External capacitor pin. A capacitor of 0.1μF should be connected to this pin and V _{SS} .
23, 84	V _{CC}	Power supply	Power supply pins (5.0 V).
11, 42, 81	V _{SS}	Power supply	Ground pins (0.0 V).

■ HANDLING DEVICES

(1) Make Sure that the Voltage not Exceed the Maximum Rating (to Avoid a Latch-up).

In CMOS ICs, a latch-up phenomenon is caused when an voltage exceeding V_{CC} or an voltage below V_{SS} is applied to input or output pins or a voltage exceeding the rating is applied across V_{CC} and V_{SS} .

When a latch-up is caused, the power supply current may be dramatically increased causing resultant thermal break-down of devices. To avoid the latch-up, make sure that the voltage not exceed the maximum rating.

In turning on/turning off the analog power supply, make sure the analog power voltage (AV_{CC} , $AVRH$, DV_{CC}) and analog input voltages not exceed the digital voltage (V_{CC}).

(2) Treatment of Unused Pins

Unused input pins left open may cause abnormal operation, or latch-up leading to permanent damage. Unused input pins should be pulled up or pulled down through at least 2 k Ω resistance.

Unused input/output pins may be left open in output state, but if such pins are in input state they should be handled in the same way as input pins.

(3) Using external clock

In using the external clock, drive X0 pin only and leave X1 pin unconnected.

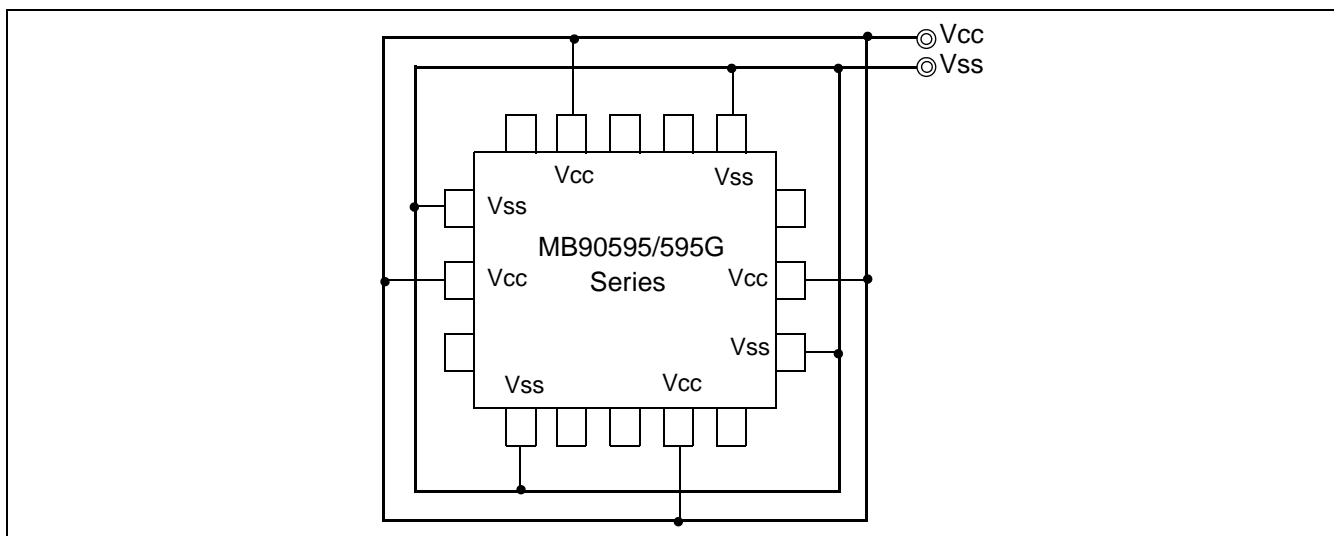

(4) Power supply pins (V_{CC}/V_{SS})

In products with multiple V_{CC} or V_{SS} pins, pins with the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, you must connect the pins to an external power and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total current rating (See the figure below.)

Make sure to connect V_{CC} and V_{SS} pins via lowest impedance to power lines.

It is recommended to provide a bypass capacitor of around 0.1 μF between V_{CC} and V_{SS} pins near the device.

(5) Pull-up/down resistors

The MB90595 Series does not support internal pull-up/down resistors. Use external components where needed.

(6) Crystal Oscillator Circuit

Noises around X0 or X1 pins may cause abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure that lines of oscillation circuit not cross the lines of other circuits.

A printed circuit board artwork surrounding the X0 and X1 pins with ground area for stabilizing the operation is highly recommended.

(7) Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply (AV_{CC}, AVR_H, AVR_L) and analog inputs (AN0 to AN7) after turning-on the digital power supply (V_{CC}).

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed AVR_H or AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable).

(8) Connection of Unused Pins of A/D Converter

Connect unused pins of A/D converter to AV_{CC} = V_{CC}, AV_{SS} = AVR_H = DV_{CC} = V_{SS}.

(9) N.C. Pin

The N.C. (internally connected) pin must be opened for use.

(10) Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 μs or more (0.2 V to 2.7 V).

(11) Indeterminate outputs from ports 0 and 1

During oscillation setting time of step-down circuit (during a power-on reset) after the power is turned on, the outputs from ports 0 and 1 become following state.

- If $\overline{\text{RST}}$ pin is "H", the outputs become indeterminate.
- If $\overline{\text{RST}}$ pin is "L", the outputs become high-impedance.

Pay attention to the port output timing shown as follow.

MB90595/595G Series

(12) Initialization

The device contains internal registers which are initialized only by a power-on reset. To initialize these registers, please turn on the power again.

(13) Directions of "DIV A, Ri" and "DIVW A, RWi" instructions

In the signed multiplication and division instructions ("DIV A, Ri" and "DIVW A, RWi"), the value of the corresponding bank register (DTB, ADB, USB, SSB) is set in "00H".

If the values of the corresponding bank register (DTB, ADB, USB, SSB) are set to other than "00H", the remainder by the execution result of the instruction is not stored in the register of the instruction operand.

(14) Using REALOS

The use of EI²OS is not possible with the REALOS real time operating system.

■ BLOCK DIAGRAM

MB90595/595G Series

■ MEMORY SPACE

The memory space of the MB90595 Series is shown below

Memory space map

Note: The ROM data of bank FF is reflected in the upper address of bank 00, realizing effective use of the C compiler small model. The lower 16-bit of bank FF and the lower 16-bit of bank 00 are assigned to the same address, enabling reference of the table on the ROM without stating “far”.

For example, if an attempt has been made to access 00C000_H, the contents of the ROM at FFC000_H are accessed. Since the ROM area of the FF bank exceeds 48 Kbytes, the whole area cannot be reflected in the image for the 00 bank. The ROM data at FF4000_H to FFFFFFF_H looks, therefore, as if it were the image for 004000_H to 00FFFF_H. Thus, it is recommended that the ROM data table be stored in the area of FF4000_H to FFFFFFF_H.

Note: Initial value of “_” represents unused bit; “X” represents unknown value.

Addresses in the range 0000_H to 00FF_H, which are not listed in the table, are reserved for the primary functions of the MCU. A read access to these reserved addresses results in reading “X”, and any write access should not be performed.

■ CAN CONTROLLER

The CAN controller has the following features:

- Conforms to CAN Specification Version 2.0 Part A and B
 - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
 - 29-bit ID and 8-byte data
 - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as 1D acceptance mask
 - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbit/s to 2 Mbit/s (when input clock is at 16 MHz)

*1: The interrupt request flag is cleared by the EI²OS interrupt clear signal.

*2: The interrupt request flag is cleared by the EI²OS interrupt clear signal. A stop request is available.

N/A: The interrupt request flag is not cleared by the EI²OS interrupt clear signal.

- Note:
- For a peripheral module with two interrupt for a single interrupt number, both interrupt request flags are cleared by the EI²OS interrupt clear signal.
 - At the end of EI²OS, the EI²OS clear signal will be asserted for all the interrupt flags assigned to the same interrupt number. If one interrupt flag starts the EI²OS and in the meantime another interrupt flag is set by hardware event, the later event is lost because the flag is cleared by the EI²OS clear signal caused by the first event. So it is recommended not to use the EI²OS for this interrupt number.
 - If EI²OS is enabled, EI²OS is initiated when one of the two interrupt signals in the same interrupt control register (ICR) is asserted. This means that different interrupt sources share the same EI²OS Descriptor which should be unique for each interrupt source. For this reason, when one interrupt source uses the EI²OS, the other interrupt should be disabled.

MB90595/595G Series

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

($V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Rating		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC}$ *1
	AV_{RH} , AV_{RL}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AV_{RH}/L$, $AV_{RH} \geq AV_{RL}$ *1
	DV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} \geq DV_{CC}$
Input voltage	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Output voltage	V_O	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Clamp Current	I_{CLAMP}	-2.0	2.0	mA	
"L" level max. output current	I_{OL1}	—	15	mA	Normal output *3
"L" level avg. output current	I_{OLAV1}	—	4	mA	Normal output, average value *4
"L" level max. output current	I_{OL2}	—	40	mA	High current output *3
"L" level avg. output current	I_{OLAV2}	—	30	mA	High current output, average value *4
"L" level max. overall output current	$\sum I_{OL1}$	—	100	mA	Total normal output
"L" level max. overall output current	$\sum I_{OL2}$	—	330	mA	Total high current output
"L" level avg. overall output current	$\sum I_{OLAV1}$	—	50	mA	Total normal output, average value *5
"L" level avg. overall output current	$\sum I_{OLAV2}$	—	250	mA	Total high current output, average value *5
"H" level max. output current	I_{OH1}	—	-15	mA	Normal output *3
"H" level avg. output current	I_{OHAV1}	—	-4	mA	Normal output, average value *4
"H" level max. output current	I_{OH2}	—	-40	mA	High current output *3
"H" level avg. output current	I_{OHAV2}	—	-30	mA	High current output, average value *4
"H" level max. overall output current	$\sum I_{OH1}$	—	-100	mA	Total normal output
"H" level max. overall output current	$\sum I_{OH2}$	—	-330	mA	Total high current output
"H" level avg. overall output current	$\sum I_{OHAV1}$	—	-50	mA	Total normal output, average value *5
"H" level avg. overall output current	$\sum I_{OHAV2}$	—	-250	mA	Total high current output, average value *5
Power consumption	P_D	—	500	mW	MB90F598/F598G
		—	400	mW	MB90598
Operating temperature	T_A	-40	+85	°C	
Storage temperature	T_{STG}	-55	+150	°C	

*1: AV_{CC} , AV_{RH} and AV_{RL} does not exceed V_{CC} and AV_{RL} does not exceed AV_{RH} .

*2: V_I and V_O should not exceed $V_{CC} + 0.3V$. V_I should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supercedes the V_I rating.

*3: The maximum output current is a peak value for a corresponding pin.

*4: Average output current is an average current value observed for a 100 ms period for a corresponding pin.

*5: Total average current is an average current value observed for a 100 ms period for all corresponding pins.

Note: Average output current = operating current \times operating efficiency

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended Conditions

($V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Value			Unit	Remarks
		Min.	Typ.	Max.		
Power supply voltage	V_{CC}	4.5	5.0	5.5	V	Under normal operation
	AV_{CC}	3.0	—	5.5	V	Maintains RAM data in stop mode
Smooth capacitor	C_S	0.022	0.1	1.0	μF	*
Operating temperature	T_A	-40	—	+85	$^{\circ}\text{C}$	

*: Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The smoothing capacitor to be connected to the V_{CC} pin must have a capacitance value higher than C_S .

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

Input capacity	C_{IN}	Other than C, AV_{CC} , AV_{SS} , AV_{RH} , AV_{RL} , V_{CC} , V_{SS} , DV_{CC} , DV_{SS} , P70 to P87	—	—	5	15	pF	
		P70 to P87	—	—	15	30	pF	

*: Current values are tentative and subject to change without notice according to improvements in the characteristics. The power supply current testing conditions are when using the external clock.

4. AC Characteristics

(1) Clock Timing

($V_{CC} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0\text{V}$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Value			Unit	Remarks
			Min.	Typ.	Max.		
Oscillation frequency	f_c	X0, X1	3	—	5	MHz	When using an oscillation circuit
			3		16	MHz	When using an external clock
Oscillation cycle time	t_{CYL}	X0, X1	200	—	333	ns	When using an oscillation circuit
			62.5		333	ns	When using an external clock
Frequency deviation with PLL *	Δf	—	—	—	5	%	
Input clock pulse width	P_{WH}, P_{WL}	X0	10	—	—	ns	Duty ratio is about 30 to 70%.
Input clock rise and fall time	t_{CR}, t_{CF}	X0	—	—	5	ns	When using external clock
Machine clock frequency	f_{CP}	—	1.5	—	16	MHz	
Machine clock cycle time	t_{CP}	—	62.5	—	666	ns	

*: Frequency deviation indicates the maximum frequency difference from the target frequency when using a multiplied clock.

• Clock Timing

Example of Oscillation circuit

MB90595/595G Series

- **Guaranteed operation range**

- **External clock frequency and machine clock frequency**

*: When using the oscillation circuit, the maximum oscillation clock frequency is 5 MHz.

AC characteristics are set to the measured reference voltage values below.

- **Input signal waveform**

Hysteresis Input Pin

- **Output signal waveform**

Output Pin

(2) Reset and Hardware Standby Input

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = AV_{SS} = 0V$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min.	Max.		
Reset input time	t_{RSTL}	\overline{RST}	$16 t_{CP}^{*1}$	—	ns	Under normal operation
			Oscillation time of oscillator ^{*2} + $16 t_{CP}^{*1}$	—	ms	In stop mode
Hardware standby input time	t_{HSTL}	\overline{HST}	$16 t_{CP}^{*1}$	—	ns	Under normal operation
			Oscillation time of oscillator ^{*2} + $16 t_{CP}^{*1}$	—	ms	In stop mode

*1: " t_{CP} " represents one cycle time of the machine clock.

No reset can fully initialize the Flash Memory if it is performing the automatic algorithm.

*2: Oscillation time of oscillator is time that the amplitude reached the 90%.

In the crystal oscillator, the oscillation time is between several ms to tens of ms. In FAR / ceramic oscillator, the oscillation time is between hundreds of μs to several ms. In the external clock, the oscillation time is 0 ms.

MB90595/595G Series

(3)Power On Reset

($V_{CC} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0\text{ V}$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Power on rise time	t_R	V_{CC}	—	0.05	30	ms	*
Power off time	t_{OFF}	V_{CC}	—	50	—	ms	Due to repetitive operation

*: V_{CC} must be kept lower than 0.2 V before power-on.

Note: • The above values are used for creating a power-on reset.

- Some registers in the device are initialized only upon a power-on reset. To initialize these register, turn on the power supply using the above values.

Sudden changes in the power supply voltage may cause a power-on reset.

To change the power supply voltage while the device is in operation, it is recommended to raise the voltage smoothly to suppress fluctuations as shown below.

In this case, change the supply voltage with the PLL clock not used. If the voltage drop is 1 V or fewer per second, however, you can use the PLL clock.

(4) UART0/1, Serial I/O Timing

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = AV_{SS} = 0V$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Serial clock cycle time	t_{SCYC}	SCK0 to SCK2	Internal clock operation output pins are $C_L = 80\text{ pF} + 1\text{ TTL}$.	$8 t_{CP}$	—	ns	
SCK ↓ ⇒ SOT delay time	t_{SLOV}	SCK0 to SCK2, SOT0 to SOT2		-80	80	ns	
Valid SIN ⇒ SCK ↑	t_{VSH}	SCK0 to SCK2, SIN0 to SIN2		100	—	ns	
SCK ↑ ⇒ Valid SIN hold time	t_{SHIX}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	
Serial clock "H" pulse width	t_{SHSL}	SCK0 to SCK2	External clock operation output pins are $C_L = 80\text{ pF} + 1\text{ TTL}$.	$4 t_{CP}$	—	ns	
Serial clock "L" pulse width	t_{LSLH}	SCK0 to SCK2		$4 t_{CP}$	—	ns	
SCK ↓ ⇒ SOT delay time	t_{SLOV}	SCK0 to SCK2, SOT0 to SOT2		—	150	ns	
Valid SIN ⇒ SCK ↑	t_{VSH}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	
SCK ↑ ⇒ Valid SIN hold time	t_{SHIX}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	

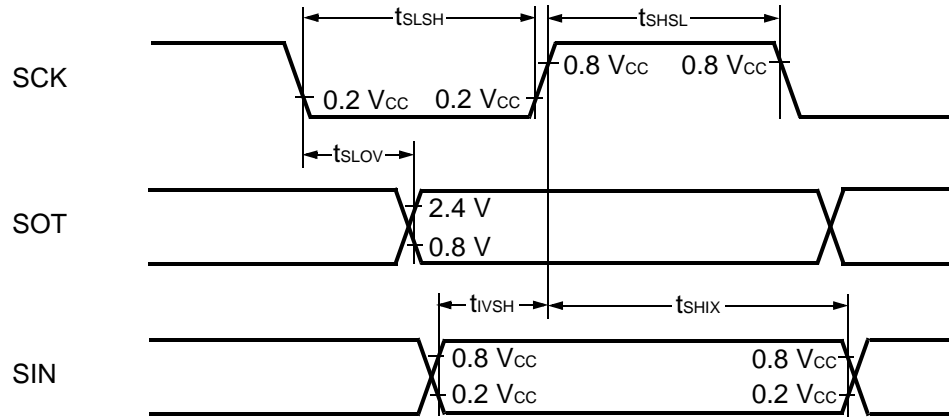

- Note: 1. AC characteristic in CLK synchronized mode.
 2. C_L is load capacity value of pins when testing.
 3. t_{CP} is the machine cycle (Unit: ns).

• Internal Shift Clock Mode

MB90595/595G Series

• External Shift Clock Mode

(5) Timer Input Timing

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = AV_{SS} = 0V$, $T_A = -40\text{ }^\circ\text{C}$ to $+85\text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks

	I_{RH}	AVRH	—	—	5	μA	*
Offset between input channels	—	AN0 to AN7	—	—	4	LSB	

*: When not operating A/D converter, this is the current ($V_{CC} = AV_{CC} = AVR_H = 5.0\text{ V}$) when the CPU is stopped.

6. A/D Converter Glossary

Resolution: Analog changes that are identifiable with the A/D converter

Linearity error: The deviation of the straight line connecting the zero transition point ("00 0000 0000" ↔ "00 0000 0001") with the full-scale transition point ("11 1111 1110" ↔ "11 1111 1111") from actual conversion characteristics

Differential linearity error: The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value

Total error: The total error is defined as a difference between the actual value and the theoretical value, which includes zero-transition error/full-scale transition error and linearity error.

$$1 \text{ LSB} = (\text{Theoretical value}) \frac{\text{AVRH} - \text{AVRL}}{1024} \text{ [V]}$$

$$\text{Total error for digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$V_{0T} (\text{Theoretical value}) = \text{AVRL} + 0.5 \text{ LSB [V]}$$

V_{NT} : Voltage at a transition of digital output from $(N - 1)$ to N

$$V_{FST} (\text{Theoretical value}) = \text{AVRH} - 1.5 \text{ LSB [V]}$$

7. Notes on Using A/D Converter

Select the output impedance value for the external circuit of analog input according to the following conditions, :

- Output impedance values of the external circuit of 15 kΩ or lower are recommended.
- When capacitors are connected to external pins, the capacitance of several thousand times the internal capacitor value is recommended to minimized the effect of voltage distribution between the external capacitor and internal capacitor.

When the output impedance of the external circuit is too high, the sampling period for analog voltages may not be sufficient (sampling period = 4.00 μs @ machine clock of 16 MHz).

• Equipment of analog input circuit model

• Error

The smaller the $|AVRH - AVRL|$, the greater the error would become relatively.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The contents of this document may not be reproduced or copied without the permission of FUJITSU LIMITED.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipments, industrial, communications, and measurement equipments, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
