STEVAL-IFS006V2

### Description

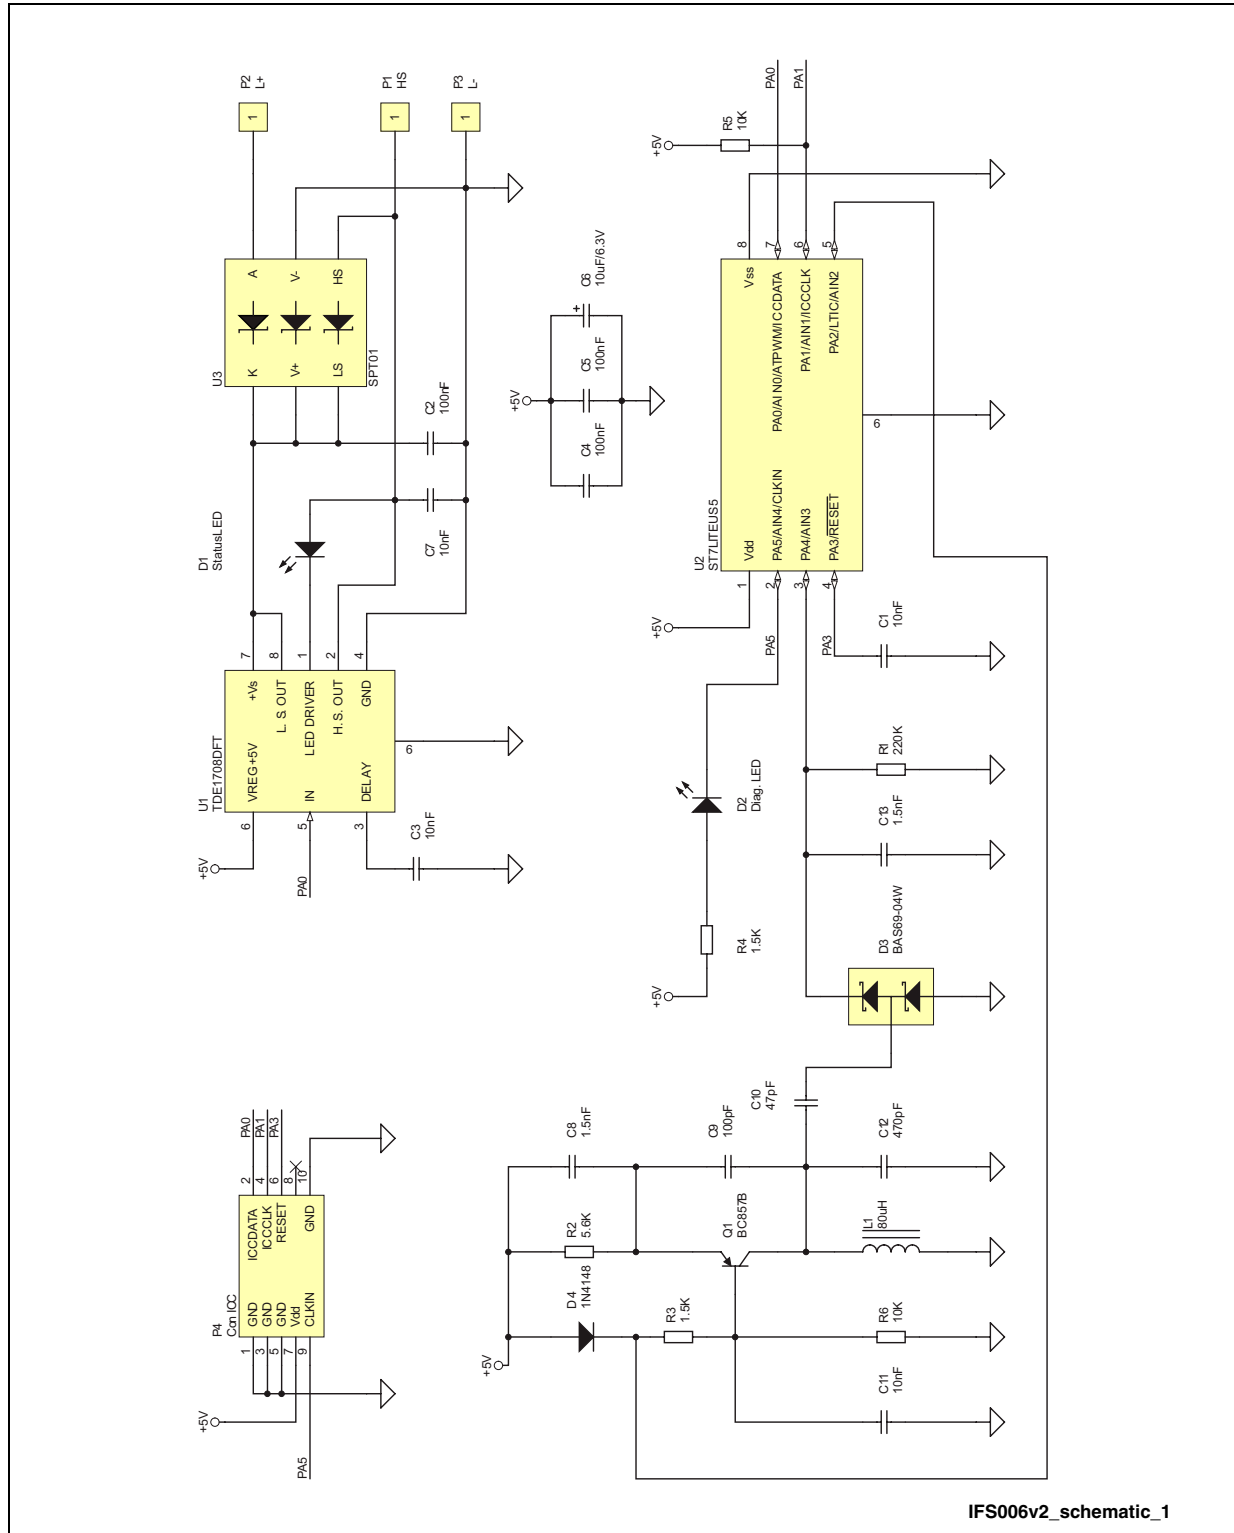

The STEVAL-IFS006V2 demonstration board is an inductive proximity switch application based on the principle of metal body detection using the eddy current effect on the HF losses of a coil.

The design consists of a single transistor HF oscillator, an ST7LITEUS5 microcontroller, an intelligent TDE1708DFT power switch, and a SPT01-335DEE triple Transil™ array.

The STEVAL-IFS006V2 represents a very simple, compact and cost-effective solution for an inductive proximity switch with wide temperature range, supply voltage variation and noise immunity in industrial environments.
