## 5 V Low Dropout Voltage Regulator with ON/OFF Switch

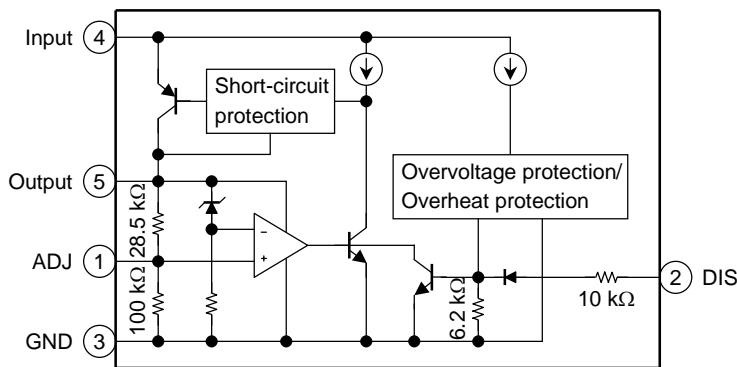

The TA8003SA is a 5 V power IC with an ON/OFF output control pin. The TA8003SA is also designed to provide a maximum output current of 400 mA.

In addition to low dropout voltage and standby current, this device has the following protective functions:

### Features

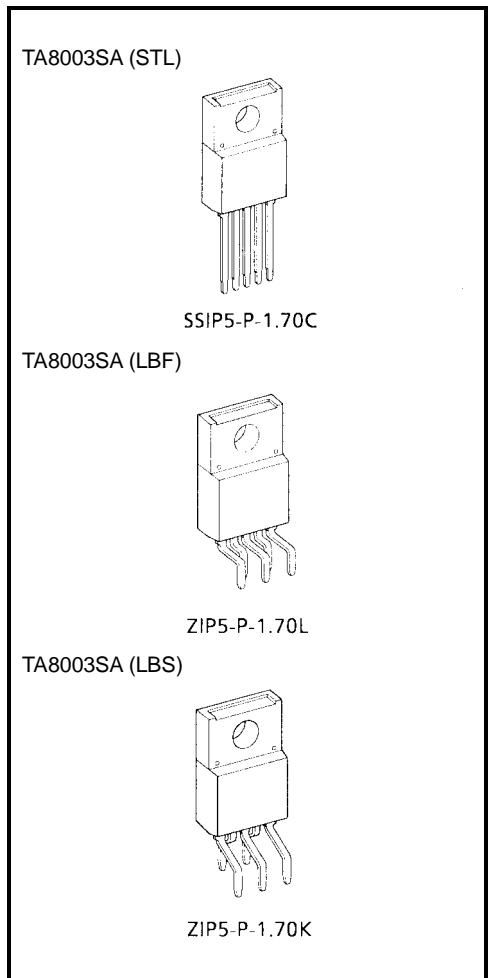

- Low standby current: 800  $\mu$ A (typ.)
- Maximum output current: 400 mA (max)
- Low dropout voltage: 0.6 V (max)
- Multi-protection:
  - Power supply reverse connection/
  - Overvoltage protection/Overheat protection/
  - Short-circuit protection/60 V load dump
- Adjustable output voltage
- Controllable output ON/OFF
- TO-220N (IS) 5-pin isolation package

### Block Diagram

### Pin Description

Pin No.	Symbol	Description
1	ADJ	Output voltage adjusting pin. Connect a resistor between ADJ and OUT to increase the output voltage. $V_{OUT} = V_{ref} \left\{ 1 + \frac{R_2(R_1 + R_{adj})}{R_1 \cdot R_{adj}} \right\}$ $R_1 = 28.5 \text{ k}\Omega, R_2 = 100 \text{ k}\Omega, V_{ref} = 1.1 \text{ V}, R_{adj}$ : Adjustment resistance
2	DIS	Output ON/OFF control pin. Output is ON when the pin is open or at the "L" level, and OFF when the pin is at the "H" level.
3	GND	Ground pin
4	IN	Power supply pin
5	OUT	The 5 V output pin with maximum output current 400 mA

Note: Output is turned ON when DIS pin is opened.

## Test Circuit

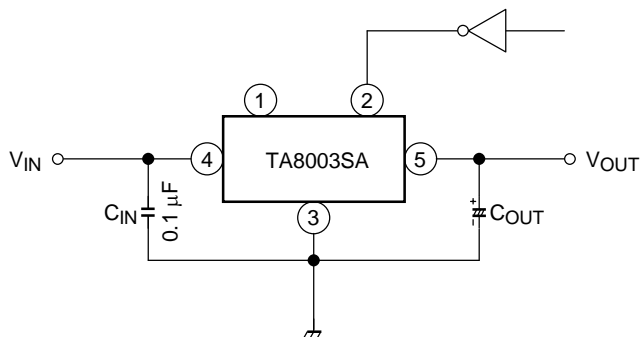

### 1. $V_{OUT}$ , Reg-Line, Reg-Load, $I_B$ , $V_{DROP}$ , $V_{IN}$ , $I_{SC}$

### 2. $V_{DIS}$ (ON), $I_{DIS}$ (ON), $V_{DIS}$ (OFF), $I_{DIS}$ (OFF)

## Application Circuit

\*: The equivalent series resistance (ESR) of  $C_{OUT}$  must be less than  $1 \Omega$  in operating temperature range.

Note on use:

1. Connect the input and output capacitors close to the pins of the regulator. If the output voltage oscillates, increase the  $C_{OUT}$  capacity and decrease the ESR. Make sure that the output voltage does not oscillate over the full range of the operating temperature.
2. When the output voltage exceeds the variable range, malfunction may arise.

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.  
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
