

Plastic package Surface Mount Silicon abrupt tuning varactor

SOT23 SURFACE MOUNT SILICON ABRUPT TUNING VARACTOR

Description

This series of silicon tuning varactors have an epitaxial mesa design with a high temperature passivation. This technology is used to produce abrupt tuning varactor in SOT23 package. This family is designed for a low cost medium to high volume market that may be supplied in tape and reel for automated pick and place assembly on surface mount circuit boards.

Applications

The DH71000 series abrupt tuning varactor are offered in a large selection of capacitance range. They provide the highest Q factor (low reverse series resistance) available for a 30 volts silicon device. Typical applications include low noise narrow and moderate frequency bandwidth applications (VCO mainly) from HF to Microwave frequencies (up to 3 GHz). Other applications are voltage tuned filters, phase shifters, delay line, etc.

NOTE: Variation of the junction capacitance versus reverse voltage follows this equation:

$$C_j(V_r) = \frac{C_j(0\text{ V})}{\left[1 + \frac{V_r}{\phi}\right]^\gamma}$$

V_r : Reverse voltage

ϕ : Built-in potential .7V for Si

γ : .5 for abrupt tuning varactor
