

CABLE JUMPERS CJ SERIES

Cable Jumpers

Cable jumpers are the most economical way of connecting and interconnecting PC Boards and components on or between boards. Solid conductors in Gray or Color-Coded cable jumpers provide convenient assembly in your application. Fast delivery at low cost. Cables are made up from standard stocked cable at factory.

Both ends of cable jumpers are stripped $\frac{3}{8}$ " long. Lengths range from 2" minimum to any length. Conductors are on .100" spacing for most convenient soldering. Up to 20 conductors are standard.

Gray cable with solid conductor is the most economical jumper. Color-coded cable is best where tracing of conductors is required. PVC Laminate over PVC insulated wire withstands most solder installations as well as provides protection and strain relief for conductors.

Specifications: CJ

Wire:
26 AWG Solid Tinned Copper

Voltage Rating:
300 Volts

Insulator:
PVC

Laminate:
PVC for Color Coded;
N/A for Gray

Temperature Rating:
80°C

Color Coding:
Brown, red, orange, yellow, green, blue, violet, gray, white, black, repeat

Note:
CJ Series are non-standard, non-returnable.
