CD4069UBC Inverter Circuits

General Description

The CD4069UB consists of six inverter circuits and is manufactured using complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity, and symmetric controlled rise and fall times.

This device is intended for all general purpose inverter applications where the special characteristics of the MM74C901, MM74C907, and CD4049A Hex Inverter/Buffers are not required. In those applications requiring larger noise immunity the MM74C14 or MM74C914 Hex Schmitt Trigger is suggested.

All inputs are protected from damage due to static discharge by diode clamps to V_{DD} and $V_{\text{SS}}.$

October 1987

Revised January 1999

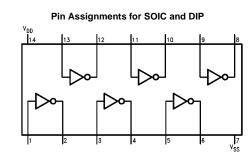

Features

- Wide supply voltage range: 3.0V to 15V
- High noise immunity: 0.45 V_{DD} typ.
- Low power TTL compatibility: Fan out of 2 driving 74L or 1 driving 74LS
- Equivalent to MM74C04

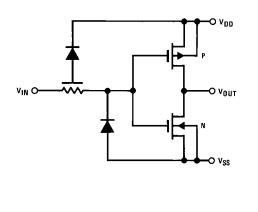

Ordering Code:

Order Number	Package Number	Package Description					
CD4069UBCM	M14A	14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-120, 0.150" Narrow Body					
CD4069UBCSJ	M14D	14-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide					
CD4069UBCN	N14A	14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide					
Device also available in Tape and Reel. Specify by appending suffix "X" to the ordering code.
