**DESCRIPTION**

The SG101A/201A/301A is a general purpose internally compensated operational amplifier. It has excellent input bias current and drift characteristics in addition to short circuit protection and is pin compatible with industry standard operational amplifiers.

The SG101A is guaranteed and fully characterized over the full military ambient temperature range of -55°C to 125°C while the SG201A is electrically identical, except its performance is guaranteed from -25°C to 85°C. The 301A is designed for commercial applications of 0°C to 70°C.

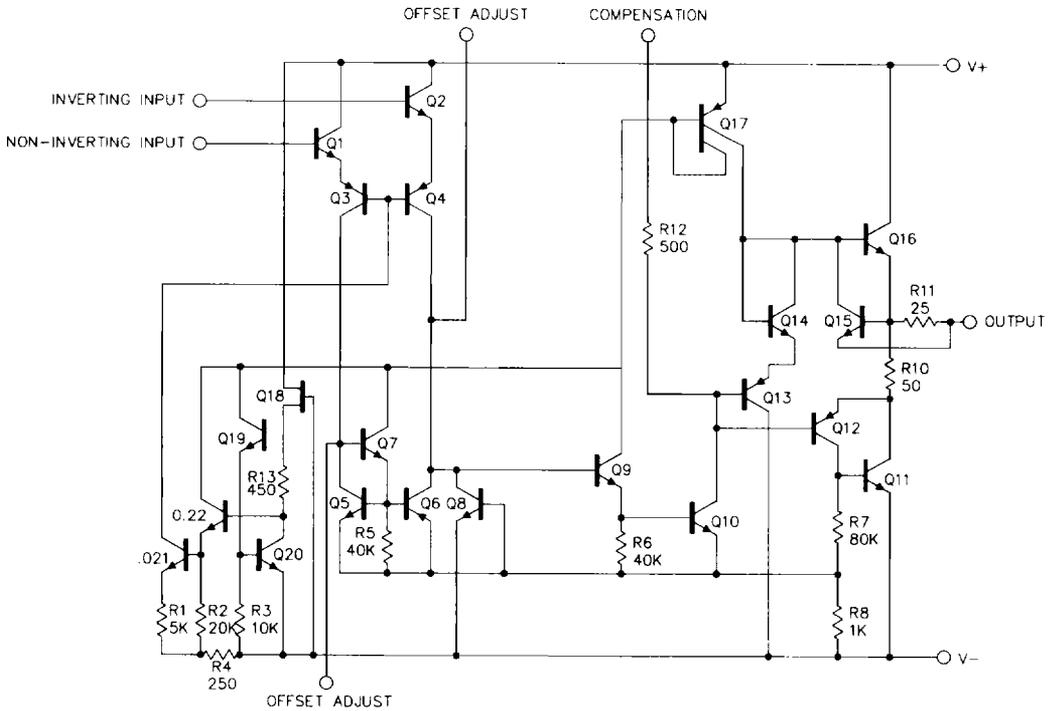

**FEATURES**

- Offset voltage 3mV maximum over temperature
- Input bias current 100nA maximum over temperature
- Offset current 20nA maximum over temperature
- Guaranteed drift characteristics
- Offsets guaranteed over entire common mode range

## ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage		Operating Junction Temperature
SG101A/201A .....	±22V	Hermetic (T, J, F Packages) .....
SG301A .....	±18V	Plastic (N Package) .....
Differential Input Voltage .....	±30V	Storage Temperature Range .....
Input Voltage (Note 2) .....	±15V	Output Short Circuit Duration (Note 3) .....
		Lead Temperature (Soldering, 10 Seconds) .....

Note 1. Exceeding these ratings could cause damage to the device.  
 Note 2. For supply voltages less than ±15V, the absolute maximum input voltage is equal to the supply voltage.  
 Note 3. Continuous short circuit is allowed for case temperatures to 125°C and ambient temperatures to 70°C.

## ELECTRICAL SPECIFICATIONS

(Unless otherwise stated, these specifications apply for the operating ambient temperature of  $T_A = 25^\circ C$  and  $\pm 5V \leq V_S \leq \pm 20V$ , and  $C_L = 30pF$ . Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)
