

TOSHIBA MOS DIGITAL INTEGRATED CIRCUIT SILICON GATE CMOS

1,048,576-WORD BY 16-BIT FULL CMOS STATIC RAM

Lead-Free

DESCRIPTION

The TC55VCM416B, TC55VEM416B, TC55YCM416B and TC55YEM416B is a 16,777,216-bit static random access memory (SRAM) organized as 1,048,576 words by 16 bits. Fabricated using Toshiba's CMOS Silicon gate process technology, this device operates from a single 2.3 to 3.6 V/1.65 to 2.2 V power supply. Advanced circuit technology provides both high speed and low power at an operating current of 2 mA/MHz and a minimum cycle time of 55 ns. It is automatically placed in low-power mode at 0.7 μ A standby current (at $V_{DD} = 3$ V, $T_a = 25^\circ\text{C}$, typical) when chip enable ($\overline{\text{CE1}}$) is asserted high or ($\overline{\text{CE2}}$) is asserted low. There are three control inputs. $\overline{\text{CE1}}$ and $\overline{\text{CE2}}$ are used to select the device and for data retention control, and output enable ($\overline{\text{OE}}$) provides fast memory access. Data byte control pin ($\overline{\text{LB}}$, $\overline{\text{UB}}$) provides lower and upper byte access. This device is well suited to various microprocessor system applications where high speed, low power and battery backup are required. And, with a guaranteed operating extreme temperature range of -40° to 85°C , the TC55VCM416B, TC55VEM416B, TC55YCM416B and TC55YEM416B can be used in environments exhibiting extreme temperature conditions. The TC55VCM416BTGN/BSGN, TC55YCM416BTGN/BSGN is available in a plastic 48-pin thin-small-outline package (TSOP). The TC55VEM416BXGN, TC55YEM416BXGN is available in a plastic 48-ball BGA.

FEATURES

- Low-power dissipation
Operating: 6 mW/MHz (typical)
- Power down features using $\overline{\text{CE1}}$ and $\overline{\text{CE2}}$
- Wide operating temperature range of -40° to 85°C
- Lead-Free

Part Number	Operating Supply Voltage	Package	Access time (MAX)		Supply Current		At Data Retention
			Supply Voltage 2.7~3.6 V	Supply Voltage 2.3~3.6 V	At Operating (MAX)	At Standby (MAX)	
TC55VCM416BTGN55	2.3~3.6 V	48-pin Plastic TSOP(I) (12×20mm) (0.5mm pin pitch) (Normal bent)	55 ns	70 ns	20 mA	15 μ A	1.5~3.6 V
TC55VCM416BSGN55		48-pin Plastic TSOP(I) (12×14mm) (0.5mm pin pitch) (Normal bent)	55 ns	70 ns			
TC55VEM416BXGN55		48-ball BGA (8×11mm) (0.75mm ball pitch)	55 ns	70 ns			

Part Number	Operating Supply Voltage	Package	Access time (MAX)		Supply Current		At Data Retention
			Supply Voltage 1.8~2.2 V	Supply Voltage 1.65~2.2 V	At Operating (MAX)	At Standby (MAX)

PIN NAMES

A0~A19	Address Inputs
CE1, CE2	Chip Enable
R/W	Read/Write Control
OE	Output Enable
LB, UB	Data Byte Control
I/O1~I/O16	Data Inputs/Outputs
V _{DD}	Power
GND	Ground
NC	No Connection
OP*	Option

*: OP pin must be open or connected to GND.

TIMING DIAGRAMS

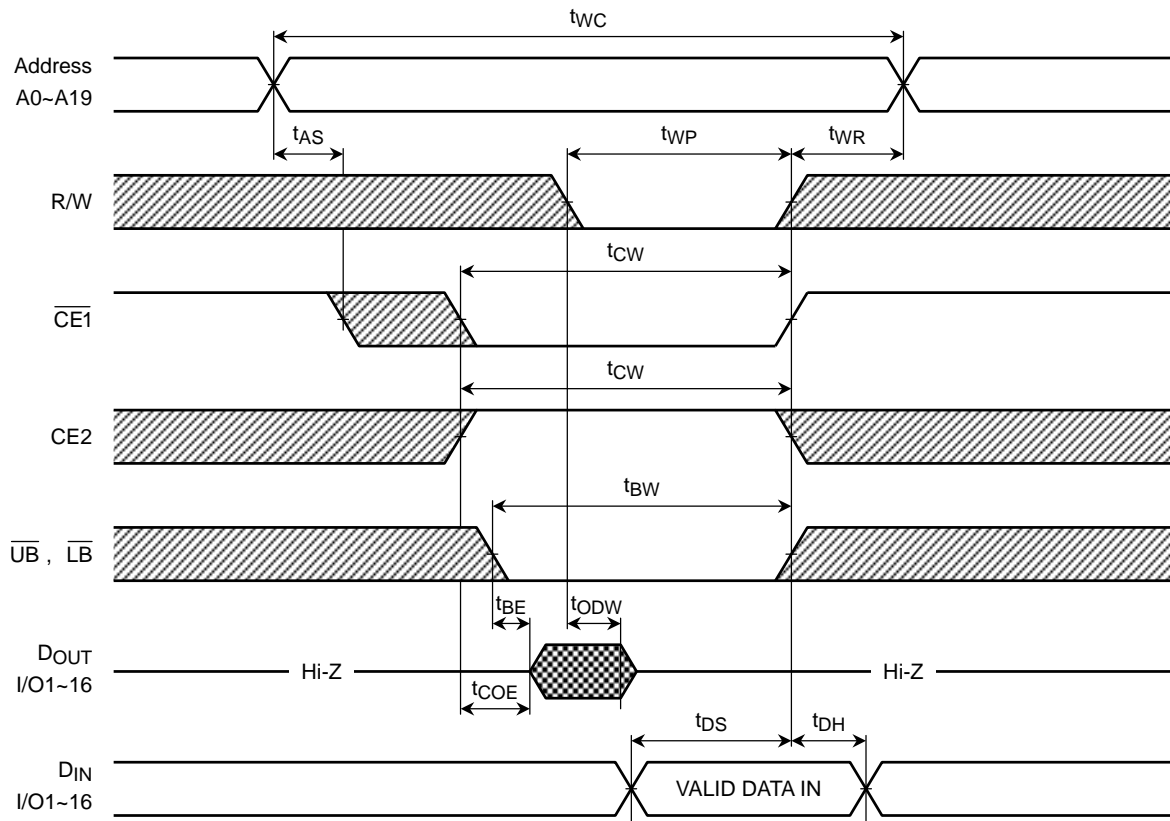

READ CYCLE

WRITE CYCLE 1 (R/W CONTROLLED)

WRITE CYCLE 2 ($\overline{CE1}$ CONTROLLED)

WRITE CYCLE 3 (CE2 CONTROLLED)

WRITE CYCLE 4 (\overline{UB} , \overline{LB} CONTROLLED)

Note:

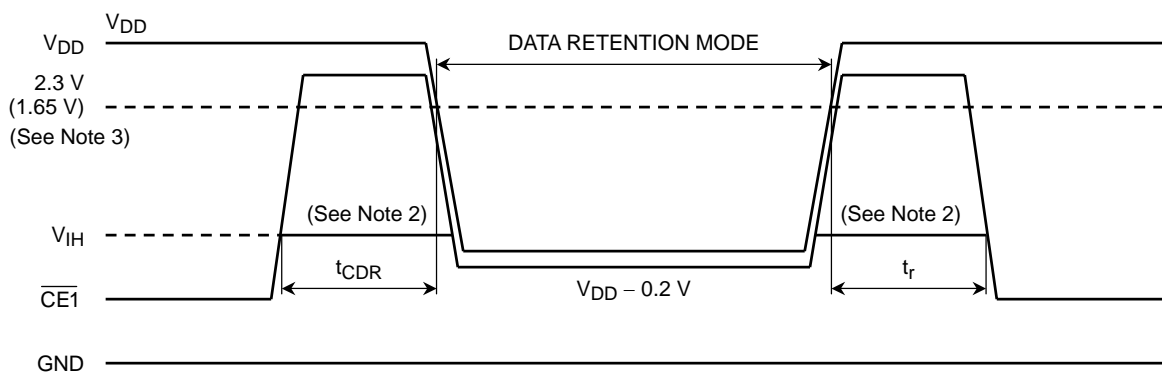

- Read cycle
 R/W remains HIGH for the read cycle.
- Write cycle1
 - (1) If $\overline{CE1}$ (or \overline{UB} or \overline{LB}) goes LOW (or CE2 goes HIGH) coincident with or after R/W goes LOW, the outputs will remain at high impedance.
 - (2) If $\overline{CE1}$ (or \overline{UB} or \overline{LB}) goes HIGH (or CE2 goes LOW) coincident with or before R/W goes HIGH, the outputs will remain at high impedance.

Don't input the same polarity signal as a R/W signal into a \overline{OE} during the write cycle.
- Write cycle1 to 4
 If \overline{OE} is HIGH during the write cycle, the outputs will remain at high impedance.
 Because I/O signals may be in the output state at this time, input signals of reverse polarity must not be applied.

DATA RETENTION CHARACTERISTICS (Ta = -40° to 85°C)

SYMBOL	PARAMETER		TC55VCM416BTGN55 TC55VCM416BSGN55 TC55VEM416BXGN55		TC55YCM416BTGN70 TC55YCM416BSGN70 TC55YEM416BXGN70		UNIT
			MIN	MAX	MIN	MAX	
V _{DH}	Data Retention Supply Voltage		1.5	3.6	1.0	2.2	V
I _{DD} S2	Standby Current	V _{DH} = 3.6 V Ta = -40~85°C	—	15	—	—	μA
		V _{DH} = 3.0 V Ta = -40~40°C	—	2	—	—	
		V _{DH} = 2.2 V Ta = -40~85°C	—	—	—	15	
t _{CDR}	Chip Deselect to Data Retention Mode Time		0	—	0	—	ns
t _r	Recovery Time		5	—	5	—	ms

CE1 CONTROLLED DATA RETENTION MODE (See Note 1)

CE2 CONTROLLED DATA RETENTION MODE (See Note 4)

Note:

- (1) In $\overline{\text{CE1}}$ controlled data retention mode, minimum standby current mode is entered when $\text{CE2} \leq 0.2 \text{ V}$ or $\text{CE2} \geq \text{V}_{\text{DD}} - 0.2 \text{ V}$.
- (2) When $\overline{\text{CE1}}$ is operating at the V_{IH}(min.) level, the operating current is given by I_{DD}S1 during the transition of V_{DD} from 2.3(2.7) to 2.2 V(2.4 V). (TC55VCM416B, TC55VEM416B)
- (3) When $\overline{\text{CE1}}$ is operating at the V_{IH}(min.) level, the operating current is given by I_{DD}S1 during the transition of V_{DD} from 1.65 to 1.6 V. (TC55YCM416B, TC55YEM416B)
- (4) In CE2 controlled data retention mode, minimum standby current mode is entered when CE2 ≤ 0.2 V.

RESTRICTIONS ON PRODUCT USE

030619EBA

- The information contained herein is subject to change without notice.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
