Note 8) Definition of Flicker level

$$F = \frac{\text{Flicker-Voltage-pp} \times 100\%}{\text{LMD-Voltage-dc}}$$

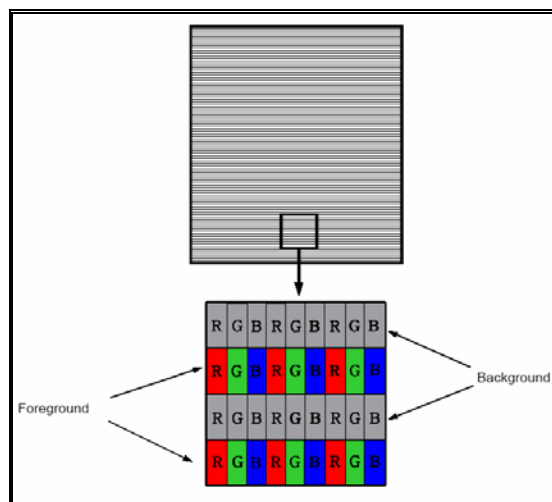

One maximum value of three estimated values

For this test, an LMD(Light Measurement Device) is needed with adequate response time to track any visible rate flicker component and with a voltage level output proportional to luminance intensity.

Backlight current : $I_B = 15\text{mA} \times 3$

Measurement distance : 50Cm

Test Pattern : Horizontal stripe pattern

9. General Precautions

9-1. Handling

- Assembled, LCD module should be firmly attached to the set.
Do not bent or twist.
- Refrain from strong mechanical shock and forces to the module.
It may cause improper operating or damage to the module.
- Do not touch, press or rub the display panel with hard or stiff tools or subjects.
The polarizer is easily damaged.
- Wipe off water or oil drop immediately
If you leave drop for a long time, stain and discoloration may occur.
- When cleaning the surface of polarizer, use soft cloth with solvent like Isopropyl or Ethyl alcohol or Hexane.
Do not use Water, Ketone, Acetone, Ethyl alcohol, Toluene, Ethyl acid, Methyl chloride.
- Be care full of applying HCFC, Chlorine(CL), Salfur(S), Spittle, Fingerprint to ITO pattern
These may cause ITO corrosion.
- When handling the LCD module, put on a soft glover like finger-glover.
- Protection film on the polarizer shall be slowly peeled off just before use, so that the electrostatic charge can be minimized.
- Do not touch pads or pins of interface directly with bare hands.
- Protect the module from static electricity, it may cause damage to CMOS LSI.
- If the liquid crystal leaks from the panel it should be kept away from the eyes and mouths.
In case of contact with skins, wash away thoroughly with soap and water.

9-2. Operation

- Do not input any signals before power is turned on.
- Do not connect or disconnect the module on the state of Power-ON.
- Power supply should be turned on or off according to Power ON/OFF sequence.
- Supply voltage within the specified voltage limit, the maximum rating, higher voltage cause the shorter LCD life or damaged.
- Avoid condensation of water, It may cause improper operation or disconnection of electrode.
- Do not leave LCD module in direct sunlight and strong ultraviolet ray for many hours.
At that time the liquid crystal shall be deteriorated by ultraviolet.

9-3. Storage

- Do not leave the module in high temperature and humidity for a long time.
It is recommended to store the module in the place with temperature from 0 to 35 °C and relative humidity of less than 70%.
- Do not store the LCD module in the direct sunlight.
- Store the module in a dark place without sunlight and fluorescent.
- Avoid intensive shock and falls from a height.
