
Features

- Superior circuit protection
- Overcurrent and overvoltage protection
- Blocks surges up to rated limits
- High-speed performance
- Small SMT package
- RoHS compliant*
- Agency recognition:

Applications

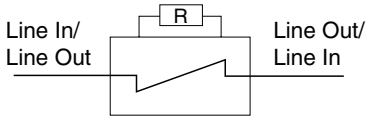
- Voice / VDSL cards
- Protection modules and dongles
- Process control equipment
- Test and measurement equipment
- General electronics

TBU-CX Series - TBU® High-Speed Protectors

General Information

The TBU-CX Series of Bourns® TBU® products are low capacitance dual bidirectional high-speed protection components, constructed using MOSFET semiconductor technology, and designed to protect against faults caused by short circuits, AC power cross, induction and lightning surges.

External Resistor



The TBU® high-speed protector placed in the system circuit will monitor the current with the MOSFET detection circuit triggering to provide an effective barrier behind which sensitive electronics will not be exposed to large voltages or currents during surge events. The TBU® device is provided in a surface mount DFN package and meets industry standard requirements such as RoHS and Pb Free solder reflow profiles.

Agency Approval

Description	
UL	File Number: E315805

Absolute Maximum Ratings (@ T_A = 25 °C Unless Otherwise Noted)

Symbol	Parameter	Part Number	Value	Unit
V_{imp}	Peak impulse voltage withstand with duration less than 10 ms	TBU-CX025-VTC-WH TBU-CX040-VTC-WH TBU-CX050-VTC-WH TBU-CX065-VTC-WH TBU-CX085-VTC-WH	250 400 500 650 850	V
V_{rms}	Continuous A.C. RMS voltage	TBU-CX025-VTC-WH TBU-CX040-VTC-WH TBU-CX050-VTC-WH TBU-CX065-VTC-WH TBU-CX085-VTC-WH	100 200 250 300 425	V
T_{op}	Operating temperature range		-40 to +125	°C
T_{stg}	Storage temperature range		-65 to +150	°C
T_{jmax}	Maximum Junction Temperature		+125	°C
ESD	HBM ESD Protection per IEC 61000-4-2		±2	kV

Electrical Characteristics (@ T_A = 25 °C Unless Otherwise Noted)

Symbol	Parameter		Part Number	Min.	Typ.	Max.	Unit
$I_{trigger}$	Current required for the device to go from operating state to protected state ($R_{external}$ = 0 ohm)		TBU-CXxxx-VTC-WH	500	750	1000	mA
R_{device}	Series resistance of the TBU device ($R_{external}$ = 0 ohm)	V_{imp} = 250 V $I_{trigger}$ (min.) = 500 mA V_{imp} = 400 V $I_{trigger}$ (min.) = 500 mA V_{imp} = 500 V $I_{trigger}$ (min.) = 500 mA V_{imp} = 650 V $I_{trigger}$ (min.) = 500 mA V_{imp} = 850 V $I_{trigger}$ (min.) = 500 mA	TBU-CX025-VTC-WH TBU-CX040-VTC-WH TBU-CX050-VTC-WH TBU-CX065-VTC-WH TBU-CX085-VTC-WH		2.6 3.6 5.0 7.0 10.7	3.0 4.2 5.7 8.0 13.0	Ω
t_{block}	Time for the device to go from normal operating state to protected state					1	μs
I_Q	Current through the triggered TBU® device with 50 Vdc circuit voltage			0.25	0.50	1.00	mA
V_{reset}	Voltage below which the triggered TBU® device will transition to normal operating state			12	16	20	V
$R_{th(j-l)}$	Junction to package pads - FR4 using recommended pad layout				98		°C/W
$R_{th(j-l)}$	Junction to package pads - FR4 using heat sink on board (6 cm^2) (1 in^2)				40		°C/W

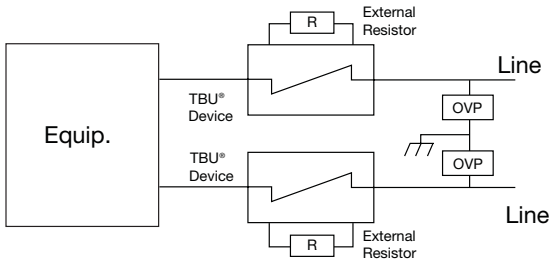
Specifications are subject to change without notice.
Customers should verify actual device performance in their specific applications.

Reference Application

The TBU® devices are general use protectors used in a wide variety of applications. The maximum voltage rating of the TBU device should never be exceeded. Where necessary, an OVP should be employed to limit the maximum voltage. A cost-effective protection solution combines Bourns® TBU® protection devices with a pair of Bourns® MOVs. For bandwidth sensitive applications, a Bourns® GDT may be substituted for the MOV. See "Trigger Current vs External Resistor Value" graph for selecting the optimum trigger current value using a 0 ohm – 50 ohm resistor value.

Note: Line Resistance =
TBU® Device Resistance + $R_{external}$ Resistance



Basic TBU Operation

The TBU® device, constructed using MOSFET semiconductor technology, placed in the system circuit will monitor the current with the MOSFET detection circuit triggering to provide an effective barrier behind which sensitive electronics are not exposed to large voltages or currents during surge events. The TBU® device operates in approximately 1 µs - once line current exceeds the TBU® device's trigger current Itrigger. When operated, the TBU® device restricts line current to less than 1 mA typically. When operated, the TBU® device will block all voltages including the surge up to rated limits.

After the surge, the TBU® device resets when the voltage across the TBU® device falls to the V_{reset} level. The TBU® device will automatically reset on lines which have no DC bias or have DC bias below V_{reset} (such as unpowered signal lines).

If the line has a normal DC bias above V_{reset}, the voltage across the TBU® device may not fall below V_{reset} after the surge. In such cases, special care needs to be taken to ensure that the TBU® device will reset, with software monitoring as one method used to accomplish this. Bourns application engineers can provide further assistance.

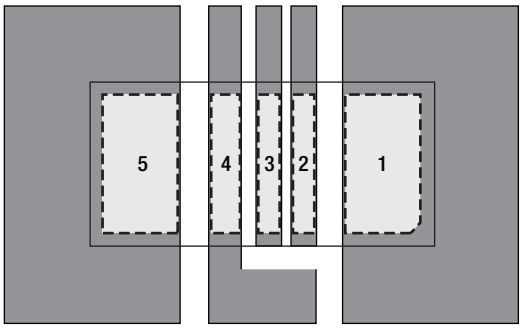
Recommended Pad Layout

TBU® High-Speed Protectors have a 100 % matte-tin termination finish. For improved thermal dissipation, the recommended layout uses PCB copper areas which extend beyond the exposed solder pad. The exposed solder pads should be defined by a solder mask which matches the pad layout of the TBU® device in size and spacing. It is recommended that they should be the same dimension as the TBU® pads but if smaller solder pads are used, they should be centered on the TBU® package terminal pads and not more than 0.10-0.12 mm (0.004-0.005 in.) smaller in overall width or length. Solder pad areas should not be larger than the TBU® pad sizes to ensure adequate clearance is maintained. The recommended stencil thickness is 0.10-0.12 mm (0.004-0.005 in.) with a stencil opening size 0.025 mm (0.0010 in.) less than the solder pad size. Extended copper areas beyond the solder pad significantly improve the junction to ambient thermal resistance, resulting in operation at lower junction temperatures with a corresponding benefit of reliability. All pads should soldered to the PCB, including pads marked as NC or NU but no electrical connection should be made to these pads. For minimum parasitic capacitance, it is recommended that signal, ground or power signals are not routed beneath any pad.



Dark grey areas show added PCB copper area for better thermal resistance.

Reflow Profile

Profile Feature	Pb-Free Assembly
Average Ramp-Up Rate (Tsmax to Tp)	3 °C/sec. max.
Preheat - Temperature Min. (Tsmin) - Temperature Max. (Tsmax) - Time (tsmin to tsmax)	 150 °C 200 °C 60-180 sec.
Time maintained above: - Temperature (TL) - Time (tL)	 217 °C 60-150 sec.
Peak/Classification Temperature (Tp)	260 °C
Time within 5 °C of Actual Peak Temp. (tp)	20-40 sec.
Ramp-Down Rate	6 °C/sec. max.
Time 25 °C to Peak Temperature	8 min. max.

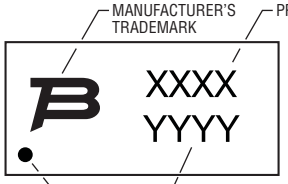
How to Order

TBU - CX 085 - VTC - WH

- TBU® Product
- Series
  - CX = Bi-Series
- Impulse Voltage Rating
  - 025 = 250 V
  - 040 = 400 V
  - 050 = 500 V
  - 065 = 650 V
  - 085 = 850 V
- Trigger Current
  - VTC = Variable Trigger Current
- Hold to Trip Ratio Suffix
  - W = Hold to Trip Ratio
- Package Suffix
  - H = DFN Package

Typical Part Marking



- PRODUCT CODE
  - 1ST & 2ND DIGITS INDICATE PRODUCT FAMILY: CX = TBU-CX SERIES
  - 3RD & 4TH DIGITS INDICATE IMPULSE VOLTAGE:
    25 = 250 V, 40 = 400 V, 50 = 500 V, 65 = 650 V, 85 = 850 V
- MANUFACTURING DATE CODE
  - 1ST DIGIT INDICATES THE YEAR'S 6-MONTH PERIOD.
  - 2ND DIGIT INDICATES THE WEEK NUMBER IN THE 6-MONTH PERIOD.
  - 3RD & 4TH DIGITS INDICATE SPECIFIC LOT FOR THE WEEK.

6-MONTH PERIOD CODES:
A = JAN-JUN 2009, B = JUL-DEC 2009, C = JAN-JUN 2010, D = JUL-DEC 2010, E = JAN-JUN 2011, F = JUL-DEC 2011
