TOSHIBA CMOS Digital Integrated Circuit Silicon Monolithic

TC7W241FU

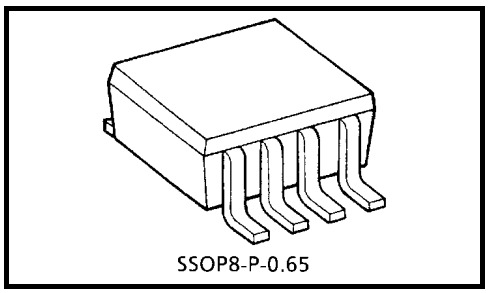
Non-Inverted, 3-State Outputs

The TC7W241FU is a high speed C²MOS Dual Bus Buffers fabricated with silicon gate C²MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the C²MOS low power dissipation.

It is a non-inverting 3-state buffer has one active-high and one active-low output enable.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.



Weight: 0.02 g (typ.)

Features

Lead temperature (10 s)	T_L	260	°C

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.
Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook (“Handling Precautions”/“Derating Concept and Methods”) and individual reliability data (i.e. reliability test report and estimated failure rate, etc).
