CM200DY-34A

HIGH POWER SWITCHING USE INSULATED TYPE

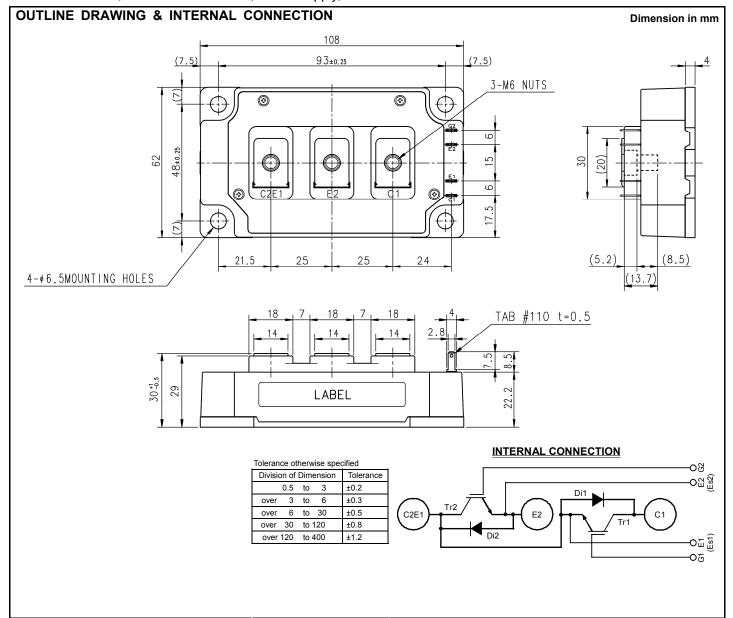

Dual (Half-Bridge)

- Flat base Type
- Copper base plate
- •RoHS Directive compliant
- •UL Recognized under UL1557, File E323585

APPLICATION

AC Motor Control, Motion/Servo Control, Power supply, etc.

Note1. Represent ratings and characteristics of the anti-parallel, emitter-collector free wheeling diode (FWDi).

- 2. Case temperature (T_C) and heat sink temperature (T_s) are defined on the each surface (mounting side) of base plate and heat sink just under the chips. Refer to the figure of chip location.
 - The heat sink thermal resistance should measure just under the chips.
- 3. Pulse width and repetition rate should be such that the device junction temperature (T_i) dose not exceed T_{imax} rating.
- 4. Junction temperature (T_j) should not increase beyond T_{jmax} rating.
- 5. Pulse width and repetition rate should be such as to cause negligible temperature rise. Refer to the figure of test circuit.
- 6. Typical value is measured by using thermally conductive grease of λ =0.9 W/(m·K).
- 7. Base plate (mounting side) flatness measurement points (X, Y) are as follows of the following figure.

Keep safety first in your circuit designs!

Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.
