DATA SHEET

LA4708N

Monolithic Linear IC

For Car Stereos

20W 2-channel BTL AF Power Amplifier

Overview

The LA4708N is a BTL two-channel power IC for car audio developed in pursuit of excellent sound quality. Low-region frequency characteristics have been improved through the use of a new NF capacitor-less circuit, and crosstalk which causes "muddy" sound has been reduced by improving both circuit and pattern layout. As a result, the LA4708N provides powerful bass and clear treble. In addition, the LA4708N features on-chip protectors and standby switch.

Features

- High power : supports total output of 30W + 30W ($V_{CC} = 13.2V$, THD = 30%, $R_L = 4\Omega$)
- Supports $R_L = 2\Omega$ ($P_O = 30W$ when $V_{CC} = 13.2V$, THD = 10%)
- Designed for excellent sound quality ($f_L < 10Hz$, $f_H = 130kHz$)
- NF capacitor-less
- Any on time settable by external capacitor
- Less pop noise
- Standby switch circuit on chip (microprocessor supported)
- Various protectors on chip (output-to-ground short/output-to- V_{CC} short/load short/overvoltage/thermal shutdown circuit)

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

LA4708N

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC} max 1	No signal, $t = 60\text{s}$	24	V
	V_{CC} max 2		16	V
Surge supply voltage	V_{CC} surge	$t \leq 0.2\text{s}$, single giant pulse	50	V
Maximum output current	I_O peak	Per channel	4.5	A
Allowable power dissipation	P_d max	Arbitrarily large heat sink	37.5	W
Operating temperature	T_{opr}		-35 to +85	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +150	$^\circ\text{C}$

* Set V_{CC} , R_L in a range that does not exceed $P_d \text{ max} = 37.5\text{W}$

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		13.2	V
Operating voltage range	V_{CC} op	Range where $P_d \text{ max}$ is not exceeded	9 to 16	V
Recommended load resistance	R_L		4	Ω
Recommended load resistance range	R_L op		2 to 4	Ω

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = 13.2\text{V}$, $R_L = 4\Omega$, $f = 1\text{kHz}$, $R_g = 600\Omega$

Parameter	Symbol	Conditions	min	typ	max	Unit
Quiescent current	I_{CCO}		70	150	250	mA
Standby current	I_{st}			10	60	μA
Voltage gain	VG		38	40	42	dB
Total harmonic distortion	THD	$P_O = 2\text{W}$		0.07	0.4	%
Output power	P_{O1}	THD = 10%	16	20		W
	P_{O2}	THD = 10%, $V_{CC} = 14.4\text{V}$		24		W
	P_{O3}	THD = 10%, $R_L = 2\Omega$		30		W
Output offset voltage	V_N offset	$R_g = 0$	-300		+300	mV
Output noise voltage	V_{NO}	$R_g = 0$, B.P.F. = 20Hz to 20kHz		0.1	0.5	mVrms
Ripple rejection ratio	SVRR	$R_g = 0$, $f_R = 100\text{Hz}$, $V_R = 0\text{dBm}$	40	50		dB
Channel separation	CHsep	$R_g = 10\text{k}\Omega$, $V_O = 0\text{dBm}$	50	60		dB
Input resistance	r_i		21	30	39	$\text{k}\Omega$
Standby pin applied voltage	V_{st}	Amp on, applied through $10\text{k}\Omega$	2.5		V_{CC}	V

Package Dimensions

Block Diagram

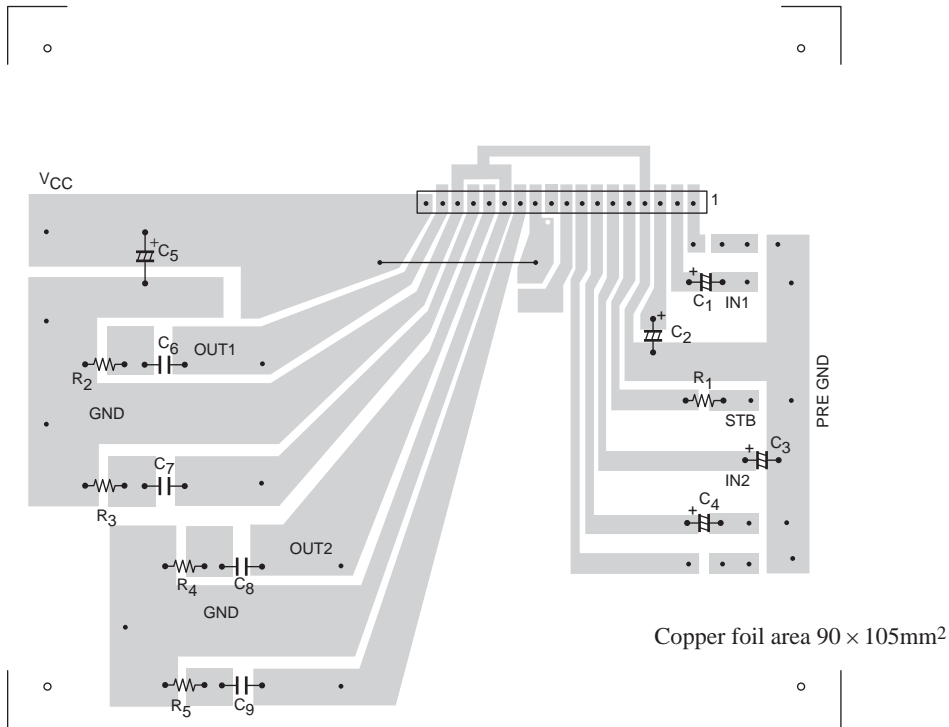

Pins 1,9 : Don't use.
Pin 10 : No connection.

Each Pin Voltage

$V_{CC} = 13.2V$, $5V$ applied through $STBY = 10k\Omega$, $R_L = 4\Omega$, $R_g = 0$

Pin No.	1	2	3	4	5	6
Name	IN1	DC	Pre-GND	STBY	ON TIME	
Pin voltage (V)	0.29	1.58	6.55	0	3.2	2.28
Pin No.	7	8	9	10	11	12
Name	IN2	POP	-	N.C	V_{CC2}	-OUT 2
Pin voltage (V)	1.58	2.08	0.29	0	13.2	6.5
Pin No.	13	14	15	16	17	18
Name	PWR-GND 2	+OUT 2	+OUT 1	PWR-GND 1	-OUT 1	V_{CC1}
Pin voltage (V)	0	6.5	6.5	0	6.5	13.2

Sample Print Pattern

Description of External Components

C1, C4	Input capacitors	2.2 μ F is recommended. f_L can be varied by C1, C4 capacitances to adjust the bass range.
C2	Decoupling capacitor (ripple filter)	
C3	Amplifier on time setting capacitor	Approximately 0.8 second for 33 μ F. Since the on time is proportional to this capacitance, it can be set as desired by varying this capacitance. (Refer to the characteristics curve.)
C5	Power supply capacitor	
C6, C7, C8, C9	Oscillation blocking capacitors	Use polyester film capacitors (Mylar capacitors) with good temperature characteristics. (R2, R3, R4, and R5 used jointly.) Since stability may be affected slightly by the pattern layout, etc., 0.1 μ F or more is recommended.
R1	Standby switch current limiting resistor	10k Ω is recommended (when the applied voltage for the standby switch is 2.5V to 13.2V). This resistor cannot be removed.

Features of IC Inside and Usage Notes

Standby function

- Pin 5 is the standby switch pin. The amplifier is turned on by applying approximately 2.5V or more to this pin through an external resistor (R1).
- If voltage in excess of 13.2V is to be applied to the standby switch, calculate the value of R1 using the following formula so that the current flowing into pin 5 is 500μA or less:

$$R1 = \frac{\text{Applied voltage} - 1.4V}{500\mu A} - 10k\Omega$$

Mute function

- Pin 6 is the connector for the capacitor that determines the on time in order to prevent pop noise. By grounding this pin, the amplifier can implement mute operation. In this case, the recovery time depends on C3.

How to reduce pop noise

- Although the LA4708N reduces pop noise, an electrolytic capacitor of between 0.47 and 2.2μF can be connected between pin 8 and the pre-GND to further reduce pop noise that occurs when power supply is turned on/off (standby switch on/off). The larger the capacitance, the lower the frequency of pop noise, and it is barely audible, but sound residue of the sound signal is liable to linger when power is turned off. Pin 8 is the bias pin for the output amplifier and normally is left open.

Protectors

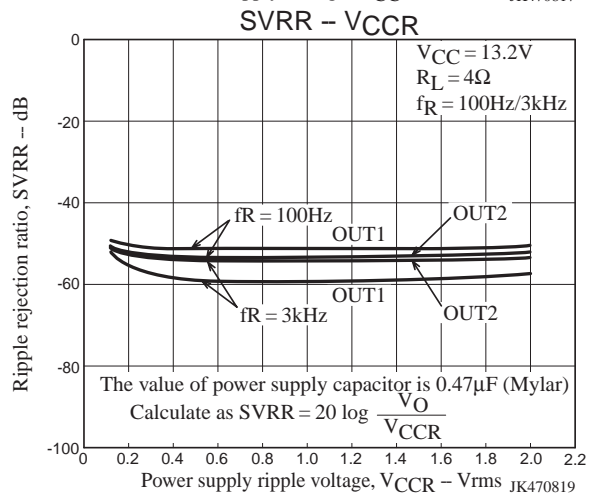

- In an output-to-ground and output-to-V_{CC} short protector system configuration, if a DC resistor is connected between amplifier output pin and GND, the protector may operate, causing the amplifier not to start operating. Therefore, as a general rule, no DC resistor should be connected between amplifier output pin and GND.
- In order to prevent damage or degradation which may be caused by abnormally heated IC, the LA4708N has a thermal shutdown protector. Accordingly, if the IC junction temperature (T_j) climbs to around 170 to 180°C due to inadequate heat dissipation, the thermal shutdown protector will operate to control the output gradually into attenuation.
- Also be fully careful of handling other protectors built in the LA4708N.

Miscellaneous

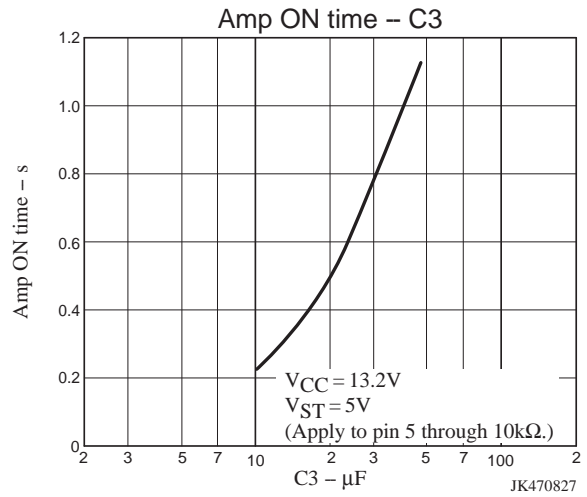

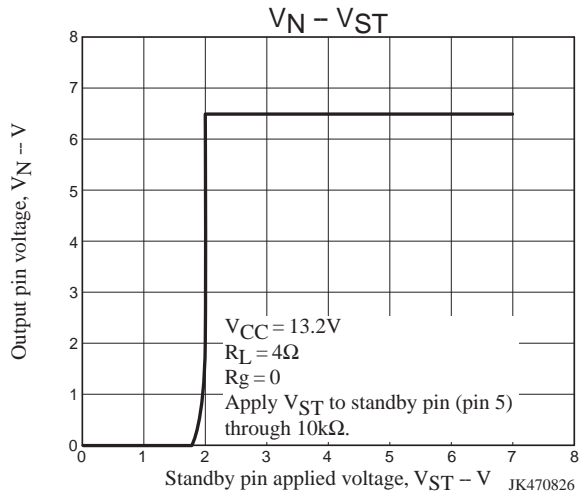

- Since pins 1 and 9, which are unused, are connected internally, they must be left open.
- Pin 10 is an NC pin (no internal connection).
