

DESCRIPTION — The SN54LS/74LS604 thru SN54LS/74LS607 are multiplexed latches designed for storing data from two input buses, A and B, and providing the stored data from either the A or B register to the output bus.

Data is loaded by the clock on the positive going transition (low-level to high-level). Control of the active and high impedance states of the outputs is also on the clock pin. The outputs are in the HIGH impedance or OFF state when the clock pin is LOW and the outputs are enabled when the clock pin is HIGH.

The SN54LS/74LS604 and 605 are designed for high speed operation and the SN54LS/74LS606 and 607 are designed to eliminate decoding voltage spikes. The SN54LS/74LS 604 and 606 have 3-state outputs while the SN54LS/74LS605 and 607 are open collector.

J Suffix — Case 733-02 (Ceramic)
N Suffix — Case 710-02 (Plastic)

FUNCTION TABLE

INPUTS		OUTPUTS		
A1-A8	B1-B8	SELECT A/B	CLOCK	Y1-Y8
A data	B data	L	↑	B data
A data	B data	H	↑	A data
X	X	X	L	Z or Off
X	X	L	H	B register stored data
X	X	H	H	A register stored data

H = high level (steady state) L = low level (steady state)
X = irrelevant Z = high-impedance state
Off = H if pull-up resistor is connected to open collector output
↑ = transition from low to high level

5

GUARANTEED OPERATING RANGES

SYMBOL	PARAMETER		MIN	TYP	MAX	UNIT
