

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## 1. Overview

The M16C/26A Group (M16C/26A, M16C/26B, M16C/26T) is a single-chip control MCU, fabricated using high-performance silicon gate CMOS technology, embedding the M16C/60 Series CPU core. The M16C/26A Group (M16C/26A, M16C/26B, M16C/26T) is housed in 42-pin and 48-pin plastic molded packages. With a 1M byte address space, this MCU combines advanced instruction manipulation capabilities to process complex instructions by less bytes and execute instructions at higher speed. The M16C/26A Group (M16C/26A, M16C/26B, M16C/26T) has a multiplier and DMAC adequate for office automation, communication devices and industrial equipment, and other high-speed processing applications.

### 1.1 Applications

Audio, cameras, office/communications/portable/ equipment, air-conditioning equipment, home appliances, etc.

## 1.2 Performance Outline

**Table 1.1** and **1.2** outline performance overview of the M16C/26A Group (M16C/26A, M16C/26B, M16C/26T).

**Table 1.1. M16C/26A Group(M16C/26A, M16C/26B, M16C/26T) Performance (48-Pin Package)**

| Item                          |  | Specification   |
|-------------------------------|--|---|
| CPU                           | Basic instructions   | 91 instructions   |
|                               | Minimum instruction execution time   | 41.7 ns (f(BCLK) = 24MHz <sup>(4)</sup> , Vcc = 4.2 to 5.5 V) (M16C/26B)  |
|                               |  | 50 ns (f(BCLK) = 20MHz, Vcc = 3.0 to 5.5 V) (M16C/26A, M16C/26B, M16C/26T(T-ver.))  |
|                               |  | 100 ns (f(BCLK) = 10MHz, Vcc = 2.7 to 5.5 V) (M16C/26A, M16C/26B)   |
|                               |  | 50 ns (f(BCLK) = 20MHz, Vcc = 4.2 to 5.5 V -40 to 105°C) (M16C/26T(V-ver.))   |
|                               |  | 62.5 ns (f(BCLK) = 16MHz, Vcc = 4.2 to 5.5 V -40 to 125°C) (M16C/26T(V-ver.))   |
| Operating mode                | Single-chip mode   |   |
| Address space                 | 1 Mbyte  |   |
| Memory capacity               | See <b>1.4 Product Information</b>   |   |
| Peripheral Function           | I/O ports  | 39 I/O pins   |
|                               | Multifunction timers   | TimerA:16 bits x 5 channels, TimerB:16 bits x 3 channels<br>Three-phase motor control timer   |
|                               | Serial I/O   | 2 channels (UART, clock synchronous serial I/O)<br>1 channel (UART, clock synchronous, I <sup>2</sup> C bus <sup>(1)</sup> , or IEBus <sup>(2)</sup> )                                |
|                               | A/D converter  | 10 bit A/D Converter : 1 circuit, 12 channels   |
|                               | DMAC   | 2 channels  |
|                               | CRC calculation circuit  | 1 circuit (CRC-CCITT and CRC-16) with MSB/LSB selectable  |
|                               | Watchdog timer   | 15 bits x 1 channel (with prescaler)  |
|                               | Interrupts   | 20 internal and 8 external sources, 4 software sources,<br>Interrupt priority level: 7  |
|                               | Clock generation circuit   | 4 circuits<br>Main clock oscillation circuit(*), Sub-clock oscillation circuit(*)<br>On-chip oscillator, PLL frequency synthesizer<br>(* )Equipped with a built-in feedback resistor. |
|                               | Oscillation stop detection   | Main clock oscillation stop, re-oscillation detection function  |
|                               | Voltage detection circuit  | On-chip (M16C/26A, M16C/26B), not on-chip (M16C/26T)  |
| Electrical Characteristics    | Power supply voltage   | Vcc = 4.2 to 5.5 V (f(BCLK) = 24 MHz) <sup>(4)</sup> (M16C/26B)   |
|                               |  | Vcc = 3.0 to 5.5 V (f(BCLK) = 20 MHz) (M16C/26A, M16C/26B)  |
|                               |  | Vcc = 2.7 to 5.5 V (f(BCLK) = 10 MHz)   |
|                               |  | Vcc = 3.0 to 5.5 V (M16C/26T(T-ver.))   |
|                               | Vcc = 4.2 to 5.5 V (M16C/26T(V-ver.))  |   |
| Power consumption             | 16 mA (Vcc = 5 V, f(BCLK) = 20 MHz)<br>25 μA (f(XCIN) = 32 KHz on RAM)<br>3 μA (Vcc = 3 V, f(XCIN) = 32 KHz, in wait mode)<br>0.7 μA (Vcc = 3 V, in stop mode) |   |
| Flash Memory Version          | Programming /erasure voltage   | 2.7 to 5.5 V (M16C/26A, M16C/26B)<br>3.0 to 5.5 V (M16C/26T(T-ver.)) 4.2 to 5.5 V (M16C/26T(V-ver.))  |
|                               | Programming /erasure endurance   | 100 times (all area) or 1,000 times (block 0 to 3)<br>/ 10,000 times (block A, block B) <sup>(3)</sup>  |
| Operating Ambient Temperature |  | -20 to 85°C / -40 to 85°C <sup>(3)</sup> (M16C/26A, M16C/26B)   |
|                               |  | -40 to 85°C (M16C/26T(T-ver.))  |
|                               |  | -40 to 105°C / -40 to 125°C (M16C/26T(V-ver.))  |
| Package                       | 48-pin plastic molded QFP  |   |

**NOTES:**

- I<sup>2</sup>C bus is a trademark of Koninklijke Philips Electronics N. V.
- IEBus is a trademark of NEC Electronics Corporation.
- See **Table 1.7 Product Code** for the program and erase endurance, and operating ambient temperature.
- The PLL frequency synthesizer is used to run the M16C/26B at f(BCLK) = 24 MHz.

**Table 1.2. Performance outline of M16C/26A group (M16C/26A, M16C/26B) (42-pin device)**

|                                       | Item   | Performance   |
|---------------------------------------|--|---|
| CPU                                   | Basic instructions                               | 91 instructions   |
|                                       | Minimum instruction execution time               | 41.7 ns (f(BCLK) = 24 MHz <sup>(4)</sup> , VCC = 4.2 to 5.5 V) (M16C/26B)   |
|                                       |  | 50 ns (f(BCLK) = 20 MHz, VCC = 3.0 to 5.5 V) (M16C/26A, M16C/26B)   |
|                                       |  | 100 ns (f(BCLK) = 10 MHz, VCC = 2.7 to 5.5 V) (M16C/26A, M16C/26B)  |
|                                       | Operation mode                                   | Single-chip mode  |
| Address space                         | 1M byte  |   |
| Memory capacity                       | See <b>1.4 Product Information</b>               |   |
| Peripheral function                   | Port   | 33 I/O pins   |
|                                       | Multifunction timer                              | Timer A: 16 bits x 5 channels, Timer B: 16 bits x 3 channels<br>Three-phase motor control timer   |
|                                       | Serial I/O                                       | 1 channel (UART, clock synchronous serial I/O)  |
|                                       |  | 1 channel (UART, clock synchronous, I <sup>2</sup> C bus <sup>(1)</sup> , or IEBus <sup>(2)</sup> )   |
|                                       | A/D converter                                    | 10 bit A/D converter: 1 circuit, 10 channels  |
|                                       | DMAC   | 2 channels  |
|                                       | CRC calculation circuit                          | 1 circuits (CRC-CCITT and CRC-16) with MSB/LSB selectable   |
|                                       | Watchdog timer                                   | 15 bits x 1 channel (with prescaler)  |
|                                       | Interrupt  | 18 internal and 8 external sources, 4 software sources,<br>Interrupt priority level: 7  |
|                                       | Clock generation circuit                         | 4 circuits<br>Main clock(*), Sub-clock(*)<br>On-chip oscillator, PLL frequency synthesizer<br>(* )Equipped with a built-in feedback resistor. |
| Oscillation stop detection            |  | Main clock oscillation stop, re-oscillation detection function  |
| Voltage detection circuit             | On-chip  |   |
| Electrical Characteristics            | Supply voltage                                   | VCC = 4.2 to 5.5 V (f(BCLK) = 24 MHz) <sup>(4)</sup> (M16C/26B)   |
|                                       |  | VCC = 3.0 to 5.5 V (f(BCLK) = 20 MHz) (M16C/26A, M16C/26B)  |
| VCC = 2.7 to 5.5 V (f(BCLK) = 10 MHz) |  |   |
| Power Consumption                     | 16 mA (VCC = 5 V, f(BCLK) = 20 MHz)              |   |
|                                       | 25 μA (f(XCIN) = 32 KHz on RAM)                  |   |
|                                       | 3 μA (VCC = 3 V, f(XCIN) = 32 KHz, in wait mode) |   |
|                                       | 0.7 μA (VCC = 3 V, in stop mode)                 |   |
| Flash memory                          | Programming/erasure voltage                      | 2.7 to 5.5 V  |
|                                       | Programming/erasure endurance                    | 100 times (all area) or 1,000 times (block 0 to 3)<br>/ 10,000 times (block A, block B) <sup>(3)</sup>  |
| Operating Ambient Temperature         |  | -20 to 85°C / -40 to 85°C <sup>(3)</sup>  |
| Package                               |  | 42-pin plastic molded SSOP  |

## NOTES:

1. I<sup>2</sup>C bus is a trademark of Koninklijke Philips Electronics N. V.
2. IEBus is a trademark of NEC Electronics Corporation.
3. See **Table 1.7 Product Code** for the program and erase endurance, and operating ambient temperature.
4. The PLL frequency synthesizer is used to run the M16C/26B at f(BCLK) = 24 MHz.

### 1.3 Block Diagram

Figure 1.1 and 1.2 show block diagrams of the M16C/26A Group (M16C/26A, M16C/26B, M16C/26T) 48-pin package and 42-pin package.

**Figure 1.3 Product Numbering System**

**Table 1.7 Product Code (Flash Memory Version) - M16C/26A, M16C/26B**

| Product Code | Package   | Internal ROM (User Program Space) |                   | Internal ROM (Data Space)   |                   | Operating Ambient Temperature |
|--------------|-----------|-----------------------------------|-------------------|-----------------------------|-------------------|-------------------------------|
|              |           | Program and Erase Endurance       | Temperature Range | Program and Erase Endurance | Temperature Range |                               |
| U3           | Lead free | 100                               | 0 to 60°C         | 100                         | 0 to 60°C         | -40 to 85°C                   |
| U5           |           |                                   |                   |                             |                   | -20 to 85°C                   |
| U7           |           | 1,000                             |                   | 10,000                      | -40 to 85°C       | -40 to 85°C                   |
| U9           |           |                                   |                   |                             | -20 to 85°C       | -20 to 85°C                   |

**Table 1.8 Product Code (Mask ROM Version - M16C/26A)**

| Product Code | Package   | Operating Ambient Temperature |
|--------------|-----------|-------------------------------|
| U3           | Lead free | -40°C to 85°C                 |
| U5           |           | -20°C to 85°C                 |

## NOTE:

- The lead contained products, D3, D5, D7, and D9 are put together with U3, U5, U7, and U9 respectively. Lead-free products can be mounted by both conventional Sn-Pb paste and Lead-free paste (Sn-Ag-Cu plating).

**Table 1.9 Product Code (Flash Memory Version) - M16C/26T T-ver.**

| Product Code | Package   | Internal ROM (User Program Space) |                   | Internal ROM (Data Space)         |                   | Operating Ambient Temperature |
|--------------|-----------|-----------------------------------|-------------------|-----------------------------------|-------------------|-------------------------------|
|              |           | Programming and erasure endurance | Temperature range | Programming and erasure endurance | Temperature range |                               |
| U3           | Lead free | 100                               | 0°C to 60°C       | 100                               | -40°C to 85°C     | -40°C to 85°C                 |
| U7           |           | 1,000                             |                   | 10,000                            |                   |                               |

**Table 1.10 Product Code (Flash Memory Version) - M16C/26T V-ver.**

| Product Code | Package   | Internal ROM (User Program Space) |                   | Internal ROM (Data Space)         |                   | Operating Ambient Temperature |

| 14      | VCC         |      |               |            |  |            |
| 15      |             | P85  | NMI           | SD         |  |            |
| 16      |             | P84  | INT2          | ZP         |  |            |
| 17      |             | P83  | INT1          |            |  |            |
| 18      |             | P82  | INT0          |            |  |            |
| 19      |             | P81  |               | TA4IN / U  |  |            |
| 20      |             | P80  |               | TA4OUT / U |  |            |
| 21      |             | P77  |               | TA3IN      |  |            |
| 22      |             | P76  |               | TA3OUT     |  |            |
| 23      |             | P75  |               | TA2IN / W  |  |            |
| 24      |             | P74  |               | TA2OUT / W |  |            |
| 25      |             | P73  |               | TA1IN / V  | CTS2 / RTS2 / TxD1                       |            |
| 26      |             | P72  |               | TA1OUT / V | CLK2 / RxD1                              |            |
| 27      |             | P71  |               | TA0IN      | RxD2 / SCL2 / CLK1                       |            |
| 28      |             | P70  |               | TA0OUT     | TxD2 / SDA2 / RTS1 / CTS1 / CTS0 / CLKS1 |            |
| 29      |             | P67  |               |            | TxD1                                     |            |
| 30      |             | P66  |               |            | RxD1                                     |            |
| 31      |             | P65  |               |            | CLK1                                     |            |
| 32      |             | P64  |               |            | RTS1 / CTS1 / CTS0 / CLKS1               |            |
| 33      |             | P17  | INT5          | IDU        |  |            |
| 34      |             | P16  | INT4          | IDW        |  |            |
| 35      |             | P15  | INT3          | IDV        |  | ADTRG      |
| 36      |             | P107 | KI3           |            |  | AN7        |
| 37      |             | P106 | KI2           |            |  | AN6        |
| 38      |             | P105 | KI1           |            |  | AN5        |
| 39      |             | P104 | KI0           |            |  | AN4        |
| 40      |             | P103 |               |            |  | AN3        |
| 41      |             | P102 |               |            |  | AN2        |
| 42      |             | P101 |               |            |  | AN1        |

## 1.6 Pin Description

**Table 1.13 Pin Description (48-Pin and 42-Pin Packages)**

| Classification                         | Pin Name  | I/O Type | Description   |
|--|---|----------|---|
| Power Supply                           | Vcc, Vss  | I        | Apply 0V to the Vss pin. Apply following voltage to the Vcc pin.<br>2.7 to 5.5 V (M16C/26A, M16C/26B), 3.0 to 5.5 V (M16C/26T T-ver.), 4.2 to 5.5 V (M16C/26T V-ver.)   |
| Analog Power Supply                    | AVcc<br>AVss  | I        | Supplies power to the A/D converter. Connect the AVcc pin to Vcc and the AVss pin to Vss  |
| Reset Input                            | RESET   | I        | The MCU is in a reset state when "L" is applied to the RESET pin  |
| CNVSS                                  | CNVss   | I        | Connect the CNVss pin to Vss  |
| Main Clock Input                       | XIN   | I        | I/O pins for the main clock oscillation circuit. Connect a ceramic resonator or crystal oscillator between XIN and XOUT. To apply external clock, apply it to XIN and leave XOUT open. If XIN is not used (for external oscillator or external clock), connect XIN pin to Vcc and leave XOUT open |
| Main Clock Output                      | XOUT  | O        |   |
| Sub Clock Input                        | Xcin  | I        | I/O pins for the sub clock oscillation circuit. Connect a crystal oscillator between Xcin and Xcout   |
| Sub Clock Output                       | Xcout   | O        |   |
| Clock Output                           | CLKOUT  | O        | Outputs the clock having the same frequency as f1, f8, f32, or fc   |
| INT Interrupt Input                    | INT0 to INT5  | I        | Input pins for the INT interrupt. INT2 can be used for Timer A Z-phase function   |
| NMI Interrupt Input                    | NMI   | I        | NMI interrupt input pin. NMI cannot be used as I/O port while the three-phase motor control is enabled. Apply a stable "H" to $\overline{\text{NMI}}$ after setting it's direction register to "0" when the three-phase motor control is enabled  |
| Key Input Interrupt                    | KI0 to KI3  | I        | Input pins for the key input interrupt  |
| Timer A                                | TA0OUT to<br>TA4OUT   | I/O      | I/O pins for the timer A0 to A4   |
|  | TA0IN to<br>TA4IN   | I        | Input pins for the timer A0 to A4   |
|  | ZP  | I        | Input pin for Z-phase   |
| Timer B                                | TB0IN to<br>TB1IN   | I        | Timer B0 to B1 input pins   |
| Three-Phase Motor Control Timer Output | U, $\overline{\text{U}}$ , V, $\overline{\text{V}}$ ,<br>W, $\overline{\text{W}}$ | O        | Output pins for the three-phase motor control timer   |
|  | IDU, IDW,<br>IDV, $\overline{\text{SD}}$  | I/O      | I/O pins for the three-phase motor control timer  |
| Serial I/O                             | CTS1 to CTS2  | I        | Input pins to control data transmission   |
|  | RTS1 to RTS2  | O        | Output pins to control data reception   |
|  | CLK1 to CLK2  | I/O      | Inputs and outputs the transfer clock   |
|  | RxD1 to RxD2  | I        | Inputs serial data  |
|  | TxD1 to TxD2  | O        | Outputs serial data   |
|  | CLKS1   | O        | Output pin for transfer clock   |
| Reference Voltage Input                | VREF  | I        | Applies reference voltage to the A/D converter  |
| A/D Converter                          | AN0 to AN7<br>AN30 to AN31  | I        | Analog input pins for the A/D converter   |
|  | ADTRG   | I        | Input pin for an external A/D trigger   |
| I/O Ports                              | P15 to P17  | I/O      | I/O ports for CMOS. Each port can be programmed for input or output under the control of the direction register. An input port can be set, by program, for a pull-up resistor available or for no pull-up resistor available in 3-bit units   |
|  | P64 to P67<br>P70 to P77<br>P80 to P87<br>P100 to P107<br>P90 to P91              | I/O      | I/O ports for CMOS. Each port can be programmed for input or output under the control of the direction register. An input port can be set, by program, for a pull-up resistor available or for no pull-up resistor available in 4-bit units   |

I : Input    O : Output    I/O : Input and output

**Table 1.13 Pin Description ( 48-pin packages only) (Continued)**

| Classification | Pin Name                 | I/O Type | Description   |
|----------------|--------------------------|----------|---|
| Serial I/O     | CTS0                     | I        | Inputs pin to control data transmission   |
|                | RTS0                     | O        | Output pin to control data reception  |
|                | CLK0                     | I/O      | Inputs and outputs the transfer clock   |
|                | RxD0                     | I        | Inputs serial data  |
|                | TxD0                     | O        | Outputs serial data   |
| Timer B        | TB2IN                    | I        | Timer B2 input pin  |
| A/D Converter  | AN24<br>AN32             | I        | Analog input pins for the A/D converter   |
| I/O Ports      | P60 to P63<br>P92 to P93 | I/O      | I/O ports for CMOS. Each port can be programmed for input or output under the control of the direction register. An input port can be set, by program, for a pull-up resistor available or for no pull-up resistor available in 4-bit units |

I : Input    O : Output    I/O : Input and output

## 2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU registers. The register bank is comprised of seven registers (R0, R1, R2, R3, A0, A1 and FB) out of 13 registers. There are two sets of register bank.

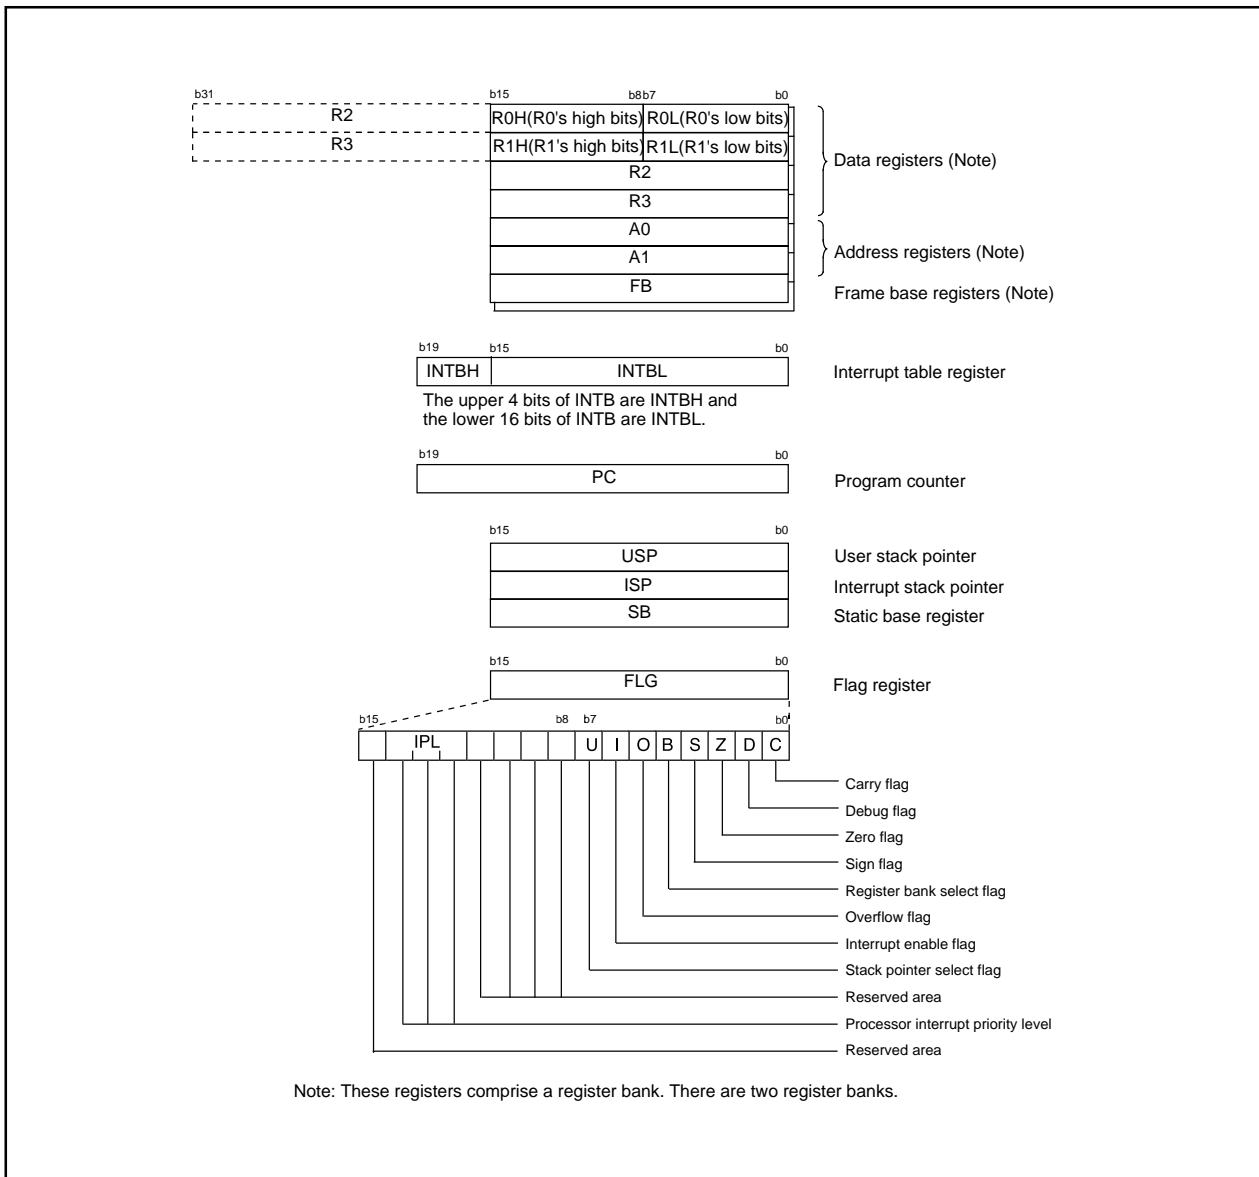

Figure 2.1. CPU Register

### 2.1 Data Registers (R0, R1, R2 and R3)

The R0 register consists of 16 bits, and is used mainly for transfers and arithmetic/logic operations. R1 to R3 are the same as R0.

The R0 register can be separated between high (R0H) and low (R0L) for use as two 8-bit data registers. R1H and R1L are the same as R0H and R0L. Conversely, R2 and R0 can be combined for use as a 32-bit data register (R2R0). R3R1 is the same as R2R0.

### 2.2 Address Registers (A0 and A1)

The register A0 consists of 16 bits, and is used for address register indirect addressing and address register relative addressing. They also are used for transfers and arithmetic/logic operations. A1 is the same as A0.

In some instructions, registers A1 and A0 can be combined for use as a 32-bit address register (A1A0).

## 2.3 Frame Base Register (FB)

FB is configured with 16 bits, and is used for FB relative addressing.

## 2.4 Interrupt Table Register (INTB)

INTB is configured with 20 bits, indicating the start address of an interrupt vector table.

## 2.5 Program Counter (PC)

PC is configured with 20 bits, indicating the address of an instruction to be executed.

## 2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

Stack pointer (SP) comes in two types: USP and ISP, each configured with 16 bits.

Your desired type of stack pointer (USP or ISP) can be selected by the U flag of FLG.

## 2.7 Static Base Register (SB)

SB is configured with 16 bits, and is used for SB relative addressing.

## 2.8 Flag Register (FLG)

FLG consists of 11 bits, indicating the CPU status.

### 2.8.1 Carry Flag (C Flag)

This flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic/logic unit.

### 2.8.2 Debug Flag (D Flag)

The D flag is used exclusively for debugging purpose. During normal use, it must be set to 0.

### 2.8.3 Zero Flag (Z Flag)

This flag is set to 1 when an arithmetic operation resulted in 0; otherwise, it is 0.

### 2.8.4 Sign Flag (S Flag)

This flag is set to 1 when an arithmetic operation resulted in a negative value; otherwise, it is 0.

### 2.8.5 Register Bank Select Flag (B Flag)

Register bank 0 is selected when this flag is 0; register bank 1 is selected when this flag is 1.

### 2.8.6 Overflow Flag (O Flag)

This flag is set to 1 when the operation resulted in an overflow; otherwise, it is 0.

### 2.8.7 Interrupt Enable Flag (I Flag)

This flag enables a maskable interrupt.

Maskable interrupts are disabled when the I flag is 0, and are enabled when the I flag is 1.

The I flag is cleared to 0 when the interrupt request is accepted.

### 2.8.8 Stack Pointer Select Flag (U Flag)

ISP is selected when the U flag is 0; USP is selected when the U flag is 1.

The U flag is cleared to 0 when a hardware interrupt request is accepted or an INT instruction for software interrupt Nos. 0 to 31 is executed.

### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL is configured with three bits, for specification of up to eight processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has priority greater than IPL, the interrupt is enabled.

### 2.8.10 Reserved Area

When write to this bit, write 0. When read, its content is undefined.

### 3. Memory

**Figure 3.1** is a memory map of the M16C/26A Group (M16C/26A, M16C/26B, M16C/26T). The M16C/26A Group provides 1-Mbyte address space addresses 00000<sub>16</sub> to FFFFF<sub>16</sub>.

The internal ROM is allocated lower address, beginning with address FFFFF<sub>16</sub>. For example, a 64-Kbyte internal ROM area is allocated in addresses F0000<sub>16</sub> to FFFFF<sub>16</sub>. The flash memory version has two sets of 2-Kbyte internal ROM area, block A and block B, for data space. These blocks are allocated addresses F000<sub>16</sub> to FFFF<sub>16</sub>.

The fixed interrupt vectors are allocated addresses FFFDC<sub>16</sub> to FFFFF<sub>16</sub> and they store the start address of each interrupt routine.

The internal RAM is allocated higher addresses, beginning with address 00400<sub>16</sub>. For example, a 1-Kbyte internal RAM area is allocated in addresses 00400<sub>16</sub> to 007FF<sub>16</sub>. The internal RAM is used for temporarily storing data. The area is also used as stacks when subroutines are called or interrupt requests are acknowledged.

The SFR is allocated addresses 00000<sub>16</sub> to 003FF<sub>16</sub>. The peripheral function control registers are allocated here. All blank spaces within SFR location are reserved and cannot be accessed by users.

The special page vectors are allocated addresses FFE00<sub>16</sub> to FFFDB<sub>16</sub>. They are used for the JMPS instruction and JSRS instruction. Refer to the Renesas publication **M16C/60 and M16C/20 Series Software Manual** for details.

**Figure 3.1 Memory Map**

## 4. Special Function Register (SFR)

Table 4.1 SFR Information(1)(1)

| Address            | Register  | Symbol | After reset  |
|--------------------|---|--------|--|
| 0000 <sub>16</sub> |   |        |  |
| 0001 <sub>16</sub> |   |        |  |
| 0002 <sub>16</sub> |   |        |  |
| 0003 <sub>16</sub> |   |        |  |
| 0004 <sub>16</sub> | Processor mode register 0                               | PM0    | 00 <sub>16</sub>   |
| 0005 <sub>16</sub> | Processor mode register 1                               | PM1    | 00001000 <sub>2</sub>  |
| 0006 <sub>16</sub> | System clock control register 0                         | CM0    | 01001000 <sub>2</sub> (M16C/26A)<br>01101000 <sub>2</sub> (M16C/26T) |
| 0007 <sub>16</sub> | System clock control register 1                         | CM1    | 00100000 <sub>2</sub>  |
| 0008 <sub>16</sub> |   |        |  |
| 0009 <sub>16</sub> | Address match interrupt enable register                 | AIER   | XXXXXX00 <sub>2</sub>  |
| 000A <sub>16</sub> | Protect register  | PRCR   | XX000000 <sub>2</sub>  |
| 000B <sub>16</sub> |   |        |  |
| 000C <sub>16</sub> | Oscillation stop detection register <sup>(2)</sup>      | CM2    | 0X000000 <sub>2</sub>  |
| 000D <sub>16</sub> |   |        |  |
| 000E <sub>16</sub> | Watchdog timer start register                           | WDTS   | XX <sub>16</sub>   |

NOTES:

1. The blank spaces are reserved. No access is allowed.
2. Bits CM27, CM21, and CM20 do not change at oscillation stop detection reset.
3. The WDC5 bit is 0 (cold start) immediately after power-on. It can only be set to 1 by program. The WDC5 bit cannot be used in M16C/26T.
4. The VCR1 and VCR2 registers do not change at software reset, watchdog timer reset, and oscillation stop detection reset.
5. Registers VCR1, VCR2, and D4INT cannot be used in M16C/26T.

**Keep safety first in your circuit designs!**

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.  
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

**Notes regarding these materials**

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
  4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
  5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
  6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
  7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
  8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
