

**3-Phase POW-R-PAK™  
 IGBT Assembly  
 400 Amperes/600 Volts**

**Description:**

The Powerex POW-R-PAK™ is a configurable IGBT based power assembly that may be used as a converter, chopper, half or full bridge, or three phase inverter for motor control, power supply, UPS or other power conversion applications.

The power assembly is mounted on a forced air-cooled heatsink and features state-of-the-art Powerex IGBTs with low conduction and low switching losses for high efficiency operation. The POW-R-PAK™ includes a low inductance laminated bus structure, optically isolated gate drive interfaces, isolated gate drive power supplies, and a DC-link capacitor bank. The control board provides a simple user interface along with built-in protection features including overvoltage, undervoltage lockout, overcurrent, overtemperature, and short circuit detection.

Depending on application characteristics, the POW-R-PAK™ is suitable for operation with DC bus voltages up to 400VDC and switching frequencies below 20kHz.

**Features:**

- High performance IGBT inverter bridge
- Integrated gate drive with fault monitoring and protection
- System status / troubleshooting LEDs to verify or monitor proper operation
- Isolated gate drive power supplies
- Low inductance laminated bus
- Output current measurement and feedback
- Superior short circuit detection & shoot through prevention

1. Open collectors can be pulled up to 30V max. and sink 50mA continuous.  
2. AGND signals to be used for analog feedback signals (i.e. twisted pair with I<sub>OUT</sub> Phase A).  
3. On the board is a jumper that enables fault reset by bringing all leg control signals low for 10 microseconds (default).
