

GD54/74HC245, GD54/74HCT245

OCTAL NONINVERTING 3-STATE TRANSCEIVERS

General Description

These Devices are identical in pinout to the 54/74LS245. They consist of eight transceivers which are designed for asynchronous two-way communications between data buses. Each device has noninverting outputs, and has an active-low output enable which is used to place the I/O ports into high-impedance states. The direction control determines the directions of data flow. When it is high, data flow from A to B; When it is low, data flow from B to A. Refer to the other devices from similar functionalities;

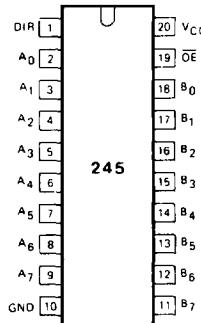

The HC/HCT 640 All Inverting outputs

The HC/HCT 643 4 Inverting &

4 Noninverting outputs.

These devices are characterized for operation over wide temperature ranges to meet industry and military specifications.
