Features

- Dropout Voltage 1.3V at 5A Output Current
- Fast Transient Response
- Line Regulation typically at 0.015%
- Load Regulation typically at 0.1%
- Internal thermal and current limiting
- Adjustable Output Voltage or Fixed 1.8V, 2.5V, 3.3V
- Standard 3-Pin Power Packages

Functional Block Diagram

Description

The Six1084 is a low dropout three terminal regulator with 5A output current capability. The output voltage is adjustable with the use of a resistor divider. For fixed output voltage versions, the output voltage is internally set at 1.8V, 2.5V, or 3.3V. Dropout is guaranteed at a maximum of 1.4V at maximum output current. Its low dropout voltage and fast transient response make it ideal for low voltage microprocessor applications. Internal current and thermal limiting provides protection against any overload condition that would create excessive junction temperatures.

Applications

- Post Regulator for Switching Supply
- Microprocessor Power Supplies
- Constant-Current Regulators
- Motherboard I/O Power Supplies

Notes:

(1) All parameters, except nominal output voltage are specified for the variable voltage version, allowing a wider V_{IN} Range.

The specified limits also apply for the fixed voltage versions over the allowable input voltage range: Six1084-1.8 (3.2V - 7.0V), Six1084-2.5 (3.9V - 7.0V), Six1084-3.3 (4.75V - 7.0V).

(2) To maintain the specified junction temperatures, low duty cycle pulse testing is required for most parameters.

Adjustable Voltage Regulator
Notes:

$$V_{REF} = V_{OUT} - V_{ADJ} = 1.25\text{V} \text{ (typ.)}$$

$$V_{OUT} = V_{REF} \times (1 + R_2/R_1) + I_{ADJ} \times R_2$$

$$I_{ADJ} = 55\mu\text{A} \text{ (typ.)}$$
