## Micro-Power Regulated Charge Pump

### GENERAL DESCRIPTION

The SGM3110 is a Micro-Power switched capacitor voltage converter that delivers a regulated output. No external inductor is required for operation.

The SGM3110 can deliver up to 100mA to the voltage regulated output. It features very low quiescent current and high efficiency over a large portion of its load range, making this device ideal for battery-powered applications. Furthermore, the combination of few external components and small package size keeps the total converter board area to a minimum in space-restricted applications.

The SGM3110 uses a pulse skipping technique to provide a regulated output from a varying input supply. The SGM3110 contains a thermal management circuit to protect the device under continuous output short-circuit conditions.

The SGM3110 is available in Green SOT-23-6 package and is rated over the -40°C to +85°C temperature range.

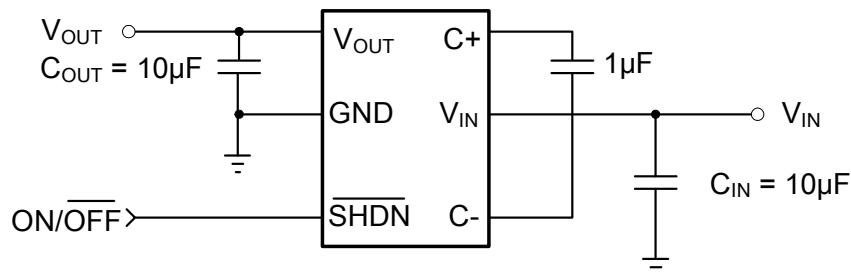

### FEATURES

- Step-Up Voltage Converter
- Input Voltage Range:
  - SGM3110-5.0: 2.7V to 5.0V
  - SGM3110-4.5: 2.7V to 4.5V
- Micro-Power Consumption: 60µA
- Fixed 5V, 4.5V ± 4% Output
- Peak Current 250mA for 100ms
- High Frequency 750kHz Operation
- Logic-Controlled Shutdown
- Short-Circuit/Over-Temperature Protection
- Available in Green SOT-23-6 Package

### APPLICATIONS

Cellular Phones  
Digital Cameras  
Handheld Electronics  
LED/Display Backlight Driver  
LEDs for Camera Flash  
Portable Communication Devices  
MP3 Players  
GPS Receivers  
PDAs

## NOTE:

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

SGMICRO reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact SGMICRO sales office to get the last datasheet.
