

## Benefits of the RFID technology

The RFID technology is successfully being used in a variety of applications such as mass transit ticketing, library asset management, logistics, anti-counterfeiting, e-passport and contactless banking.

It is also the right solution for improving traceability, supply chain visibility, counterfeiting prevention, and easing the scanning process.

The key benefits of RFID lie in a non line-of-sight, rewrite capability. Moreover, the RFID tags do not need any battery to operate, which makes their lifetime and cost attractive.

Most electronics designers who know the technology understand that they can turn their application into an RFID reader by either using an OEM reader module or a reader IC such as STMicroelectronics' CRX14. This gives them the capability of reading RFID tags.

However, few know that they actually can add the RFID tag function to their application by designing the RFID chip and the antenna directly on the printed-circuit board (PCB). Each PCB is then identified with a so-called UID, which is a factory-programmed-and-locked unique identifier that follows the ISO 15963 numbering standard.

RFID tag ICs also come with different user memory sizes, usually EEPROM memory. They can be used as means of storing and tracking many types of information:

- bill of material
- board revision
- firmware version
- schematics and layout file information
- documentation link
- date code
- manufacturing plant
- manufacturing flow
- key process characteristics
- end product type
- warranty/return information
- repair and upgrade history
- customer information
- anti-tamper information

Thanks to the EEPROM and the RFID technologies, this information can be programmed and updated throughout the entire manufacturing process and beyond. In this way, you can keep track of what happens to a PCB from its manufacturing to the end of its life. If the board is going to be refurbished and upgraded, you will know it.

Moreover, this information can be encrypted by the reader before programming so the data stored in the tag are useless to anybody else who might be reading it. Most RFID tag ICs also come with several data protection schemes to help protect their contents.

When it comes to implementation, RFID chips are available from STMicroelectronics in a soldering-friendly package such as UFDFPN8 (MLP8).

As far as the antenna is concerned, designers would replicate what RFID antenna designers do. To some extent, the inlay process is a very simple, one-layer, thin-flex PCB process where the antenna is etched off. STMicroelectronics application note AN2866 provides insight for designing and validating an RFID antenna.

You can design three types of antenna: on-board, off-board and daughterboard antennas.

## Antenna types

### On-board antennas

[Figure 1](#) shows an on-board antenna example. The pros and cons are then summarized.

**Figure 1.** On-board antenna

#### Pros

- Integrated and compact solution
- No connector, better reliability

#### Cons

- Less space available on the PCB for a large antenna. Read range may then be smaller
- More sophisticated PCB design to avoid interference with the RF signal

**Off-board antenna**

Figure 2 shows an off-board antenna example. The pros and cons are then summarized.

**Figure 2. Off-board antenna**

**Pros**

- Antenna may be placed closer to the outside of the device
- Larger antenna may be designed, possibly leading to better read ranges

**Cons**

- Impedance matching, and connections plus wires make the design optimization more critical

**Daughterboard antenna**

Figure 3 shows a daughterboard antenna example. The pros and cons are then summarized.

**Figure 3. Daughterboard antenna**

**Pros**

- Accommodates designs with space constraints

**Cons**

- Impedance matching and connections make the design optimization more critical
- Because there may be very little space between the antenna and the board, the read ranges may be limited

## STMicroelectronics' RFID products

STMicroelectronics offers a wide range of RFID tag ICs that covers the HF (13.56 MHz) and UHF (800-950 MHz) frequency bands and offers a user memory whose capacity goes from a few hundreds to several tens of thousands of bits.

The LR (long-range) series, based on the ISO 15693 standard, and the SR (short-range) series, based on the ISO 14443-B standard, both operate at 13.56 MHz. LR and SR devices are particularly well suited to PCB traceability applications because they:

- offer well contained read ranges
- allow a simple and straightforward antenna design
- are used in many industries
- are interoperable with a wide range of readers

STMicroelectronics' RFID products are ideal for PCB traceability applications owing to the combination of key features:

- best-in-class read ranges
- high-reliability and -endurance memory
- availability in different capacitance values for a wide choice of antenna sizes
- availability in different forms, including UDFPN8 (MLP8)
- wide range of memory sizes

## Revision history

**Table 1. Document revision history**

Date	Revision	Changes
25-Mar-2009	1	Initial release.

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
