General Purpose Peak EMI Reduction IC

Description

PCS3P2005A is a versatile, 3.3 V/5 V, 1x spread spectrum frequency modulator designed to reduce electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of down stream clock and data dependent signals. The device allows significant system cost savings by reducing the number of circuit board layers ferrite beads, shielding and other passive components that are traditionally required to pass EMI regulations.

PCS3P2005A modulates the output of a PLL in order to "spread" the bandwidth of a synthesized clock, and more importantly, decreases the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal's bandwidth is called 'spread spectrum clock generation.'

PCS3P2005A accepts an input from an external reference clock and locks to a 1x modulated clock output. Two logic pins S0 and D_C enable selecting one of the 4 different frequency deviations. Refer to the *Deviation Selection Table* for more details. Frequency Range Selection pin enables operation in one of the two frequency ranges. PCS3P2005A operates over a supply voltage range of 5 V / 3.3 V. PCS3P2005A is available in 8 Pin TSSOP and SOIC Packages, over Commercial and Industrial temperature range.

Applications

PCS3P2005A is targeted for use in a broad range of notebook and desktop PCs and consumer electronic applications.

Features

- 1x, LVCMOS Peak EMI Reduction
- Input Frequency:

10 MHz – 30 MHz @ 3.3 V 30 MHz – 100 MHz @ 5 V

• Output Frequency:

10 MHz – 30 MHz @ 3.3 V 30 MHz – 100 MHz @ 5 V

- Four Different Frequency Deviation Selection
- Selectable Spread Options: Down Spread and Center Spread
- Frequency Range Selection
- Supply Voltage:

 $5 \text{ V} \pm 0.5 \text{ V}$ 3.3 V ± 0.3 V

- 8 Pin TSSOP, SOIC Package
- Commercial and Industrial Temperature Range
- These are Pb-Free Devices

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

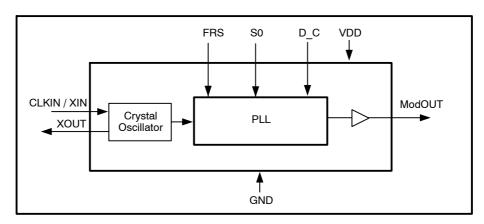

Figure 1. Block Diagram

Table 1. ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Rating	Unit
VDD, V _{IN}	Voltage on any input pin with respect to Ground	-0.5 to +7.0	V
T _{STG}	Storage temperature	-65 to +125	°C
T _s	Max. Soldering Temperature (10 sec)	260	°C
T _J	T _J Junction Temperature		°C
