Biased; NOTE 1	1	LOW	HIGH	Single Ended to Differential	Inverting

NOTE 1: Single ended use requires that one of the differential inputs be biased. The voltage at the biased input sets the switch point for the single ended input. For LVCMS and LVTTL levels the recommended input bias network is a resistor to VCC, a resistor of equal value to ground and a 0.1μF capacitor from the input to ground. The resulting switch point is approximately VCC/2 ± 300mV.
