SUPPLEMENT
S34MS-1

## Preface

This supplementary document provides information on a device designed for limited distribution. It describes how the features, operation, and ordering options of this device have been enhanced or changed from the standard device on which it is based. The information contained in this document modifies any information on the same topics established by the data sheets listed in the Table 2, and should be used in conjunction with those documents. This document may also contain information that was not previously covered by data sheets S34MS-1. It is intended for hardware system designers and software developers of applications, operating systems, or tools.

## Parameter Page

Prior to reading the Unique ID, check the Unique-ID read Support value provided in Table 1.
Table 1. 48 nm / 41 nm Parameter Page with Unique-ID Read Support ${ }^{[1]}$

| Technology | Density | Partial OPN | Byte 8 | Byte 254 | Byte 255 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 48 nm | 1 Gb | S34MS01G100 | 33 h | 6 Ch | EDh |
|  |  | S34MS01G104 | 33 h | 1 Eh | 9 Bh |
| 43 nm | 2 Gb | S34MS02G100 | 3 Bh | A8h | 4 Bh |
|  |  | S34MS02G104 | $3 B h$ | DAh | 3 Dh |
|  | 4 Gb | S34MS04G100 | 3 Bh | D6h | 00 h |
|  |  | S34MS04G104 | 3 Bh | A4h | 76 h |

Note

1. All other parameters can be found in the S34MS-1 datasheets.

Table 2. Affected Documents/Related Documents

| Title | Publication Number |
| :---: | :---: |
| S34MS01G1, S34MS02G1, S34MS04G1 1-BIT ECC, X8 AND <br> X16 I/O, 1.8V VCC SLC NAND Flash for Embedded | $002-00330$ |

## 1. Read Unique ID

The device supports the ONFI Read Unique ID function, initiated by writing below command sequence to the command register, followed by an address input of Block\# 0, Page\# 2, as shown in Figure 1. The host must monitor the R/B\# pin or wait for the maximum data transfer time (tR) before reading the Unique ID data. The first sixteen bytes returned by the flash is a unique value. The next sixteen bytes returned are the bit-wise complement of the unique value. The host can verify the Unique ID was read correctly by performing an XOR of the two values. The result should be all ones. If the result is not all ones, the host needs to repeat the XOR operation with the next copy of Unique ID data and its complement. There are 512 Unique ID bytes: 256 Unique and 256 ID complement (see Table 3). Figure 2 and Figure 3 shows the test mode entry and the complete unique ID timing diagram. The command register remains in Unique ID mode until further commands are issued to it.

Note: For $41 \mathrm{~nm} 2 \mathrm{~Gb} / 4 \mathrm{~Gb}$ Cypress NAND, for a particular condition, the Read Unique ID command does not give the correct values. To overcome this issue, the host must issue a Reset command before the Read Unique ID command. Issuance of Reset before the Read Unique ID command will provide the correct values and will not output 00h values. This does not apply to 48nm 1Gb.

| $448-463$ | Unique ID |
| $464-479$ | ID Complement |
| $480-495$ | Unique ID |
| $496-511$ | ID Complement |

## 2. Ordering Information

The ordering part number is formed by a valid combination of the following:
S34MS 04G

## Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Contact your local sales office to confirm availability of specific valid combinations and to check on newly released combinations.

| Valid Combinations |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Device Family | Density | Technology | Bus Width | Package Type | Temperature Range | Additional Ordering Options | Packing Type | Package Description |
