Description

Pericom semiconductor's PI3PCIE3242 is a differential exchange switch featuring pass-through pinout. It supports one full PCI Express[®] lane 2x2 Exchange Switch operating at 8.0Gbps PCIe[®] 3.0 performance.

With the select control input low, Port A connects to Port B, and Port C connects to port D for an 8-channel differential passthough. When the select control input is high Port A connects to Port D, and Port B connects to Port C.

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

Note: Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
