# life.augmented

# **ESDAVLC5-1BF4**

# Low clamping, very low capacitance bidirectional single line ESD protection

Datasheet - production data

#### **Features**

- · Low clamping voltage
- · Bidirectional device
- Low leakage current
- 0201 package
- Ultra low PCB area: 0.18 mm<sup>2</sup>
- ECOPACK<sup>®</sup>2 compliant component

#### Complies with the following standards

- IEC 61000-4-2 level 4 (exceed level 4):
  - ±30 kV (air discharge)
  - ±12 kV (contact discharge)

## **Applications**

Where transient over voltage protection in ESD sensitive equipment is required, such as:

- · Smartphones, mobile phones and accessories
- Tablets, PCs, netbooks and notebooks
- · Portable multimedia devices and accessories
- Digital cameras and camcorders
- Communication and highly integrated systems

## **Description**

The ESDAVLC5-1BF4 is a bidirectional single line TVS diode designed to protect the data line or other I/O ports against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required.

Figure 10. Footprint in mm (inches)

Figure 11. Marking

Note:

The marking codes can be rotated by 90° or 180° to differentiate assembly location. In no case should this product marking be used to orient the component for its placement on a PCB. Only pin 1 mark is to be used for this purpose.

# 2.2 Packing information

Figure 12. Tape and reel outline

# 3 Recommendation on PCB assembly

## 3.1 Stencil opening design

- 1. General recommendations on stencil opening design
  - a) Stencil opening dimensions: L (Length), W (Width), T (Thickness).

Figure 13. Stencil opening dimensions

b) General design rule

Stencil thickness (T) = 75  $\sim$  125  $\mu$ m

Aspect Ratio = 
$$\frac{W}{T} \ge 1.5$$

Aspect Area = 
$$\frac{L \times W}{2T(L + W)} \ge 0.66$$

2. Recommended stencil window

a) Stencil opening thickness: 80 μm

b) Other dimensions: see Figure 14

Figure 14. Recommended stencil window position, stencil opening thickness: 80 µm

### 3.2 Solder paste

- 1. Use halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste recommended.
- 3. Offers a high tack force to resist component displacement during PCB movement.
- 4. Use solder paste with fine particles: Type 4 (powder particle size 20-48  $\mu$ m per IPC J STD-005).

### 3.3 Placement

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.
- 3. Standard tolerance of ± 0.05 mm is recommended.
- 4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- 5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- 6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.4 PCB design preference

- To control the solder paste amount, the closed via is recommended instead of open vias.
- The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

# 3.5 Reflow profile

Figure 15. ST ECOPACK<sup>®</sup> recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement.

# 4 Ordering information

Figure 16. Ordering information scheme

**Table 4. Ordering information** 

| Order code    | Marking          | Package | Weight   | Base qty | Delivery mode |
|---------------|------------------|---------|----------|----------|---------------|
| ESDAVLC5-1BF4 | M <sup>(1)</sup> | 0201    | 0.116 mg | 15000    | Tape and reel |

<sup>1.</sup> The marking codes can be rotated by  $90^\circ$  or  $180^\circ$  to differentiate assembly location

# 5 Revision history

**Table 5. Document revision history** 

| Date        | Revision | Changes     |
|-------------|----------|-------------|
| 15-Oct-2015 | 1        | First issue |
