

12.5-30GHz Low Noise Amplifier

GaAs Monolithic Microwave IC in SMD leadless package

Description

The CHA3688aQDG is a three-stage self-biased wide band monolithic low noise amplifier monolithic circuit.

The circuit is manufactured with a pHEMT process, 0.25µm gate length, via holes through the substrate, air bridges and electron beam gate lithography.

It is supplied in RoHS compliant SMD package.

Main Features

- Broadband performances: 12.5-30GHz
- 2.1dB noise figure
- 26dB gain
- 26dBm Output IP3
- DC bias: Vd = 4V @ Id = 85 / 115mA
- 24L-QFN4x4
- MSL1

Main Characteristics

Tamb.= +25°C

Symbol	Parameter	Min	Typ	Max	Unit
Freq	Frequency range	12.5		30	GHz
Gain	Linear Gain	21	26		dB
NF	Noise Figure		2.1	2.5	dB
OIP3	3rd order intercept point (16 - 30GHz)	24	26		dBm

Main Characteristics (low current configuration)

Tamb = +25°C, Vd1=Vd2=Vd3= +4V and Pads B, D not connected

Symbol	Parameter	Min	Typ	Max	Unit
Freq	Frequency range	12.5		30	GHz
Gain	Linear Gain (12.5 - 24GHz)	22	25		dB
	Linear Gain (24.5 - 30GHz)	20	23		dB
ΔG	Gain flatness (12.5 - 24GHz)		±1.5		dB
	Gain flatness (24.5 - 30GHz)		±2		dB
NF	Noise figure (12.5 - 16GHz)		2.3	2.6	dB
	Noise figure (16.5 - 24GHz)		2.0	2.3	dB
	Noise figure (24.5 - 30GHz)		2.2	2.5	dB
S11	Input return loss (12.5 - 16GHz) (27 – 30GHz)		2.5:1	3.0:1	dB
	Input return loss (16.5 - 26.5GHz)		2.0:1	2.5:1	dB
S22	Output return loss		2.0:1	2.5:1	dB
OIP3	3rd order intercept point @ Pout SCL < 8dBm from 16 to 30GHz	23	25		dBm
P1dB	Output power at 1dB gain compression	13	14		dBm
Id	Drain bias current		85	115	mA
Vd	Drain bias voltage		4		V

These values are representative of onboard measurements as defined on the drawing in paragraph "Evaluation mother board".

Main Characteristics (high current configuration)

Tamb = +25°C, Vd1=Vd2=Vd3= +4V and Pads B, D Grounded

Symbol	Parameter	Min	Typ	Max	Unit
Freq	Frequency range	12.5		30	GHz
Gain	Linear Gain (12.5 - 24GHz)	23	26		dB
	Linear Gain (24.5 - 30GHz)	21	24		dB
ΔG	Gain flatness		±2		dB
NF	Noise figure (12.5 - 16GHz)		2.3	2.6	dB
	Noise figure (16.5 - 24GHz)		2.0	2.3	dB
	Noise figure (24.5 - 30GHz)		2.2	2.5	dB
S11	Input return loss (12.5 - 16GHz) (27 – 30GHz)		2.5:1	3.0:1	dB
	Input return loss (16.5 - 26.5GHz)		2.0:1	2.5:1	dB
S22	Output return loss		2.0:1	2.5:1	dB
OIP3	3rd order intercept point @ Pout SCL < 8dBm from 16 to 30GHz	24	26		dBm
P1dB	Output power at 1dB gain compression	14	15		dBm
Id	Drain bias current		115	150	mA
Vd	Drain bias voltage		4		V

These values are representative of onboard measurements as defined on the drawing in paragraph "Evaluation mother board".

Absolute Maximum Ratings ⁽¹⁾

Tamb.= +25°C

Symbol	Parameter	Values	Unit
Vd	Drain bias voltage	4.5V	V
Pin	RF input power	10	dBm
Tj	Junction temperature ⁽²⁾	175	°C
Ta	Operating temperature range	-40 to +85	°C
Tstg	Storage temperature range	-55 to +150	°C

⁽¹⁾ Operation of this device above anyone of these parameters may cause permanent damage.

Typical Bias Conditions

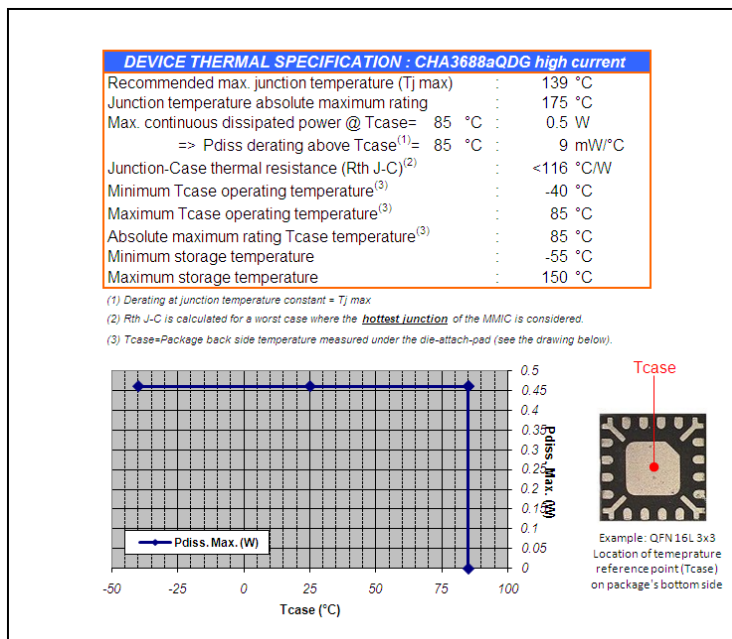

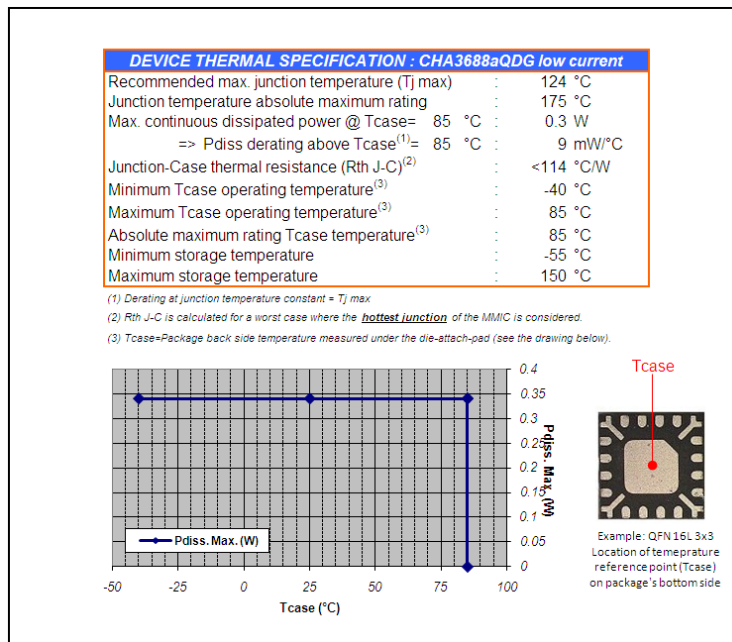

Tamb.= +25°C

Symbol	Pad N°	Parameter	Values	Unit
Vd1	23	DC Drain voltage	4	V
Vd2	21	DC Drain voltage	4	V
Vd3	19	DC Drain voltage	4	V
B	9	DC Gate voltage	Connected to ground or not	
D	11	DC Gate voltage		

Device thermal performances

All the figures given in this section are obtained assuming that the QFN device is cooled down only by conduction through the package thermal pad (no convection mode considered). The temperature is monitored at the package back-side interface (Tcase) as shown below. The system maximum temperature must be adjusted in order to guarantee that Tcase remains below than the maximum value specified in the next table. So, the system PCB must be designed to comply with this requirement.

A de-rating must be applied on the dissipated power if the Tcase temperature cannot be maintained below than the maximum temperature specified (see the curve P_{diss. Max}) in order to guarantee the nominal device life time (MTTF).

Typical Package Sij parameters for low current configuration

Tamb = +25°C, Vd1=Vd2=Vd3= +4V, Id = 90mA and Pads B, D not connected

Typical Board Measurements

Tamb = +25°C, Vd1=Vd2=Vd3= +4V Id = 85mA

Pads B, D not connected (low current configuration)

Measurements are given in the package access planes. Losses are de-embedded.

Gain and return losses versus frequency

Noise figure versus frequency

Typical Board Measurements

Tamb = +25°C, Vd1=Vd2=Vd3= +4V Id = 115mA

Pads B, D Grounded (high current configuration)

Measurements are given in the package access planes. Losses are de-embedded.

Gain and return losses versus frequency

Noise figure versus frequency

Typical Board Measurements

Measurements are given in the package access planes. Losses are de-embedded.
 Tamb = +25°C, Vd1=Vd2=Vd3= +4V Id = 85/115mA

Output power -1dB for low and high current configurations

Typical Board Measurements

Tamb = -40°C / +25°C / +85°C, Vd1=Vd2=Vd3= +4V

Measurements are given in the package's access plans. Losses are de-embedded.

**Gain measurement for low current configuration
Pads B, D not connected**

**Gain measurement for high current configuration
Pads B, D Grounded**

Typical Board Measurements

Tamb = -40°C / +25°C / +85°C, Vd1=Vd2=Vd3= +4V

Measurements are given in the connectors' access plans. Losses are not de-embedded.

**Output power -1dB measurement for low current configuration
Pads B, D not connected**

**Output power -1dB measurement for high current configuration
Pads B, D Grounded**

Typical Board Measurements

Tamb = -40°C / +25°C / +85°C, Vd1=Vd2=Vd3= +4V Id = 85mA

Pads B, D not connected (low current configuration)

Measurements are given in the connectors' access plans. Losses are not de-embedded.

Output IP3 versus input power @ 12GHz

Output IP3 versus input power @ 20GHz

Output IP3 versus input power @ 28GHz

Output IP3 versus input power @ 30GHz

Typical Board Measurements

Tamb = -40°C / +25°C / +85°C, Vd1=Vd2=Vd3= +4V Id = 115 mA

Pads B, D = GND (high current configuration)

Measurements are given in the connectors' access plans. Losses are not de-embedded.

Output IP3 versus input power @ 12GHz

Output IP3 versus input power @ 20GHz

Output IP3 versus input power @ 28GHz

Output IP3 versus input power @ 30GHz

Package outline (1)

Matt tin, Lead Free (Green)	1- Nc	9- B	17- GND
Units : mm	2- GND	10- Nc	18- Nc
From the JEDEC MO-220 (VGGD)	3- GND	11- D	19- Vd3
25- GND	4- RF in	12- Nc	20- Nc
	5- GND	13- GND	21- Vd2
	6- GND	14- GND	22- Nc
	7- Nc	15- RF out	23- Vd1
	8- Nc	16- GND	24- Nc

(1) The package outline drawing included to this data-sheet is given for indication. Refer to the application note AN0017 (<http://www.ums-gaas.com>) for exact package dimensions.

(2) It is strongly recommended to ground all pins marked "Gnd" through the PCB board. Ensure that the PCB board is designed to provide the best possible ground to the package.

Definition of the Sij reference planes

The reference planes used for Sij measurements given above are symmetrical from the symmetrical axis of the package (see drawing beside). The input and output reference planes are located at 3.18mm offset (input wise and output wise respectively) from this axis. Then, the given Sij parameters incorporate the land pattern of the evaluation motherboard recommended in paragraph "Evaluation motherboard".

Evaluation mother board

- Compatible with the proposed footprint.
- Based on typically Ro4003 / 8mils or equivalent.
- Using a micro-strip to coplanar transition to access the package.
- Recommended for the implementation of this product on a module board.
- Decoupling capacitors of 10nF \pm 10% are recommended for all DC accesses.
- See application note AN0017 for details.

Chip Biasing options

This chip is self-biased, and flexibility is provided by the access to number of pads. The internal DC electrical schematic is given in order to use these pads in a safe way.

The requirement is not to exceed $V_{ds} = 3.5\text{V}$ (internal Drain to Source voltage).

We propose two standard biasings:

- Low Noise and low consumption: $V_d = 4\text{V}$ and B & D leads non connected (NC).
 $I_{dd} = 85\text{mA}$ & $P_{out-1\text{dB}} = 14\text{dBm}$ Typical.
- Low Noise and higher output power: $V_d = 4\text{V}$ and B, D grounded
 $I_{dd} = 115\text{mA}$ & $P_{out-1\text{dB}} = 15\text{dBm}$ Typical.

Note

Due to ESD protection circuits, RFin and RFout are DC grounded and an external capacitance might be requested to isolate the product from external voltage that could be present on the RF accesses.

The DC connections (Vd1, Vd2 and Vd3) do not include any decoupling capacitor in package, therefore it is mandatory to provide a good external DC decoupling (typically 10nF) on the PC board, as close as possible to the package.

Recommended package footprint

Refer to the application note AN0017 available at <http://www.ums-gaas.com> for package footprint recommendations.

SMD mounting procedure

For the mounting process standard techniques involving solder paste and a suitable reflow process can be used. For further details, see application note AN0017.

Recommended environmental management

Refer to the application note AN0019 available at <http://www.ums-gaas.com> for environmental data on UMS package products.

Recommended ESD management

Refer to the application note AN0020 available at <http://www.ums-gaas.com> for ESD sensitivity and handling recommendations for the UMS package products.
