

**SURFACE MOUNT**  
**500 Watt Low Capacitance**  
**Transient Voltage Suppressor**

- High Reliability controlled devices
- Unidirectional construction
- Available J-bend termination
- Selections for 5.0 to 75 V standoff voltages ( $V_{WM}$ )

**DEVICES**                      **MSMBSAC5.0 thru MSMBSAC75, e3**

**LEVELS**  
**M, MA, MX, MXL**

## FEATURES

- High reliability controlled devices with wafer fabrication and assembly lot traceability
- 100 % surge tested devices
- Optional up screening available by replacing the M prefix with MA, MX or MXL. These prefixes specify various screening and conformance inspection options based on MIL-PRF-19500. Refer to [MicroNote 129](#) for more details on the screening options
- Low capacitance performance of 30pF
- Suppresses transients up to 500 W Peak Pulse Power @ 10/1000
- Moisture classification is Level 1 with no dry pack required per IPC/JEDEC J-STD-020B
- RoHS compliant devices available by adding an "e3" suffix
- 3 $\sigma$  lot norm screening performed on Standby Current  $I_D$

**DO-214AA**

## APPLICATIONS / BENEFITS

- Low Capacitance for data-line protection to 10 MHz
- Protection for aircraft fast data rate lines per select waveforms in RTCA/DO-160F (see [MicroNote 130](#) for Waveform 4 and 5A capability) & ARINC 429 with bit rates of 100 kb/s (per ARINC 429, Part 1, par. 2.4.1.1)
- ESD and EFT protection per IEC61000-4-2 and IEC61000-4-4 respectively
- Secondary lightning protection per IEC61000-4-5 with 42 Ohms source impedance:
  - Class 1: MSMBSAC5.0 to MSMBSAC75
  - Class 2: MSMBSAC5.0 to MSMBSAC45
  - Class 3: MSMBSAC5.0 to MSMBSAC22
  - Class 4: MSMBSAC5.0 to MSMBSAC10
- Secondary lightning protection per IEC61000-4-5 with 12 Ohms source impedance
  - Class 1: MSMBSAC5.0 to MSMBSAC26
  - Class 2: MSMBSAC5.0 to MSMBSAC15
  - Class 3: MSMBSAC5.0 to MSMBSAC7.0

## MAXIMUM RATINGS

- Peak Pulse Power dissipation at 25 °C: 500 watts at 10/1000  $\mu$ s with impulse repetition rate (duty factor) of 0.01 % or less\*
- $t_{clamping}$  (0 volts to  $V_{BR}$  min.): < 5 ns theoretical for unidirectional
- Operating and Storage temperature: -65 °C to +150 °C
- Steady-State Power dissipation\*: 2.5 watts at  $T_L = +75$  °C
- Solder temperatures: 260 °C for 10 s (maximum)

\* TVS devices are not typically used for dc power dissipation and are instead operated  $\leq V_{WM}$  (rated standoff voltage) except for transients that briefly drive the device into avalanche breakdown ( $V_{BR}$  to  $V_C$  region) of the TVS element. Also see Figures 5 and 6 for further protection details in rated peak pulse power for unidirectional and bidirectional configurations respectively.

## MECHANICAL AND PACKAGING

- Void-free transfer molded thermosetting epoxy body meeting UL94V-0
- J-bend tin-lead (90 % Sn, 10 % Pb) or RoHS (100 % Sn) compliant annealed matte-tin plating solderable per MIL-STD-750, method 2026
- Cathode indicated by band
- Part number marked on package
- Available in Bulk or Custom Tape & Reel packaging
- Weight: 0.1 gram (approximately)

MSMBJSAC50	50	55.50	5.0	88.0	5.8	30	150	10	200
MSMBJSAC75	75	83.3	5.0	121	4.1	30	150	10	200

\*See Figure 3. For the MSMBJSAC75, the maximum clamping voltage  $V_C$  is at the maximum rated Peak Pulse Current ( $I_{PP}$ ) of 4.1 Amps.

**Clamping Factor:** The ratio of the numerical value of  $V_C$  to  $V_{(BR)}$  is typically 1.4 @ full rated power, 1.20 @ 50% rated power. Also see MicroNote 108.

**Note 1:** A transient voltage suppressor is normally selected according to voltage ( $V_{WM}$ ), that should be equal to or greater than the dc or continuous peak operating voltage level.

**Note 2:** When pulse testing, test in TVS avalanche direction. Do not pulse in "forward" direction. See section for "Schematic Applications" herein.

## SCHEMATIC APPLICATIONS

The TVS low capacitance device configuration is shown in Figure 4. As a further option for unidirectional applications, an additional low capacitance rectifier diode may be used in parallel in the same polarity direction as the TVS as shown in Figure 5. In applications where random high voltage transients occur, this will prevent reverse transients from damaging the internal low capacitance rectifier diode and also provide a low voltage conducting direction. The added rectifier diode should be of similar low capacitance and also have a higher reverse voltage rating than the TVS clamping voltage  $V_C$ .

If using two (2) low capacitance TVS devices in anti-parallel for bidirectional applications, this added protective feature for both directions (including the reverse of each rectifier diode) is inherently provided in Figure 6. The unidirectional and bidirectional configurations in Figure 5 and 6 will both result in twice the capacitance of Figure 4.
