# Embedded Software Solutions at all levels

# Embedded Software with SPC5Studio

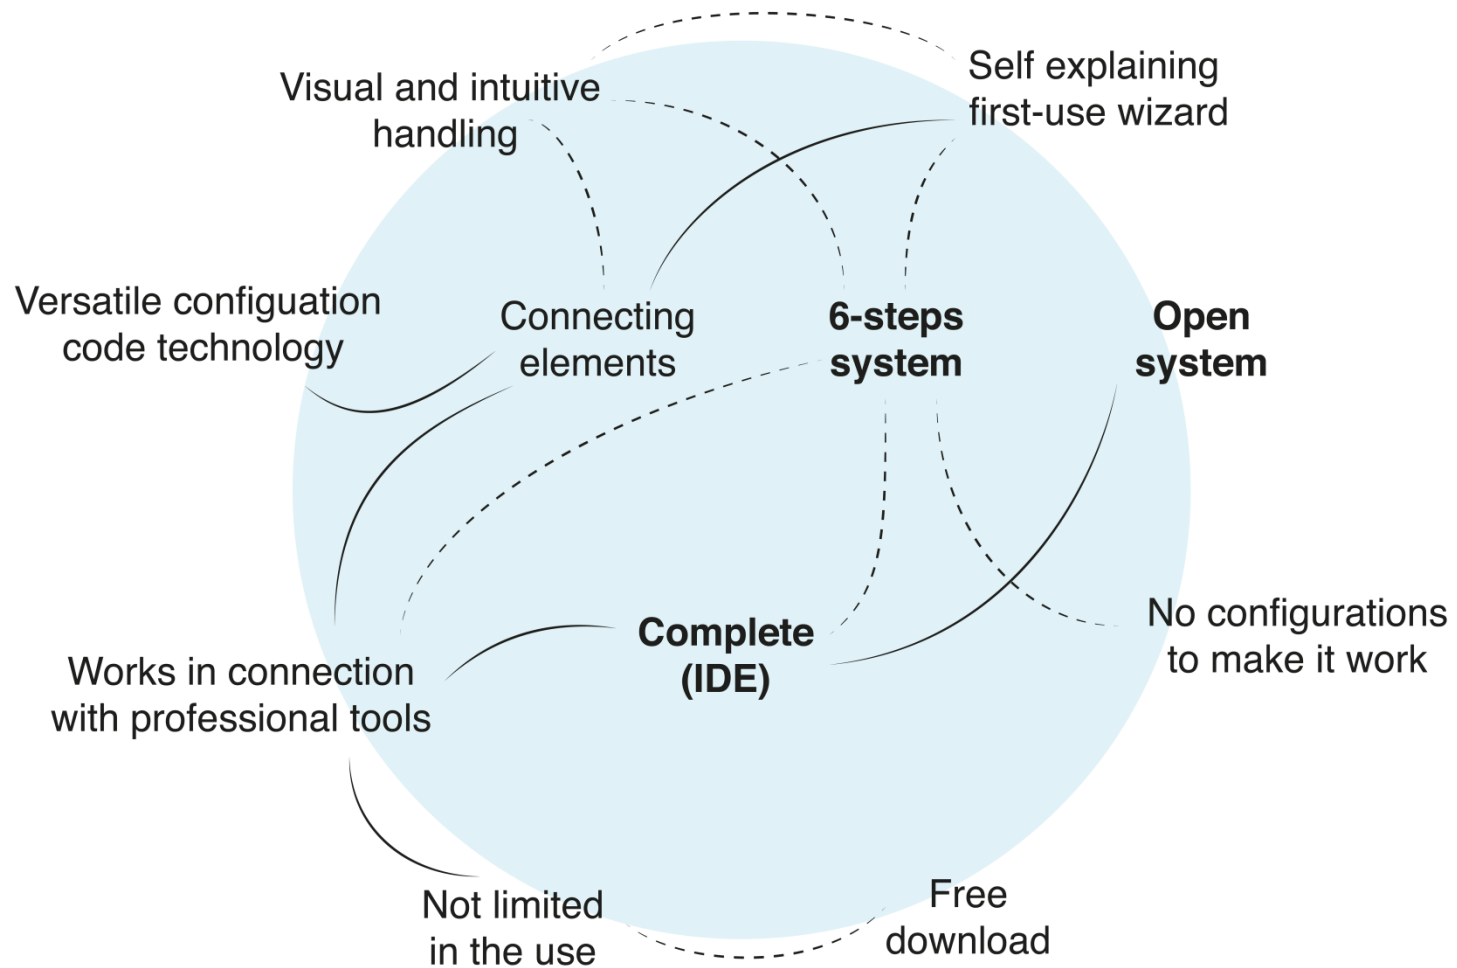

- SPC5Studio is an open framework to host several software packages and functionalities to simplify developers evaluation and application start-up
  - Dedicated Eclipse plug-ins
    - Combines, configure and solve dependencies among embedded software modules
    - Includes: Application examples selection Wizard, Pin Map Graphic Wizard, New Project Wizard, New Component Wizard.
  - Embedded Software
    - HAL, RTOS, Platform components, Application Example, Libraries are the key enablers
  - Pre-integrated compiler and debugger view
  - On-line help

**SPC5Studio** offers a free, eclipse based, fully integrated development environment with full flexibility to integrate functional extension

Dedicated eclipse plug-ins inside SPC5Studio wrap software packages and libraries into Solutions

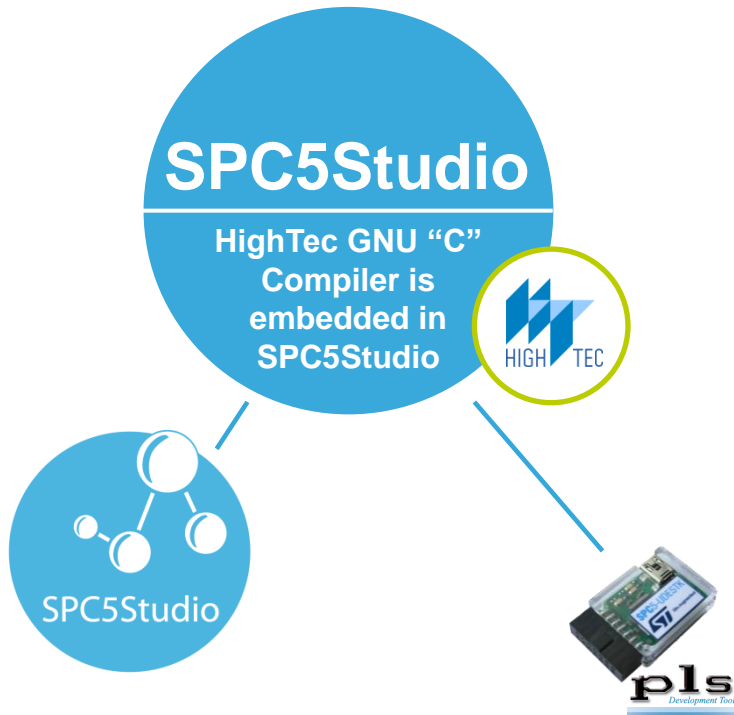

# SPC5Studio concept map

# SPC5Studio associated tools

- SPC5Studio framework include
  - HighTec GCC Compiler
  - PLS UDE low cost Debugger

To facilitate user in getting started at budget price

Download: SPC5Studio  
[www.st.com/spc5studio](http://www.st.com/spc5studio)

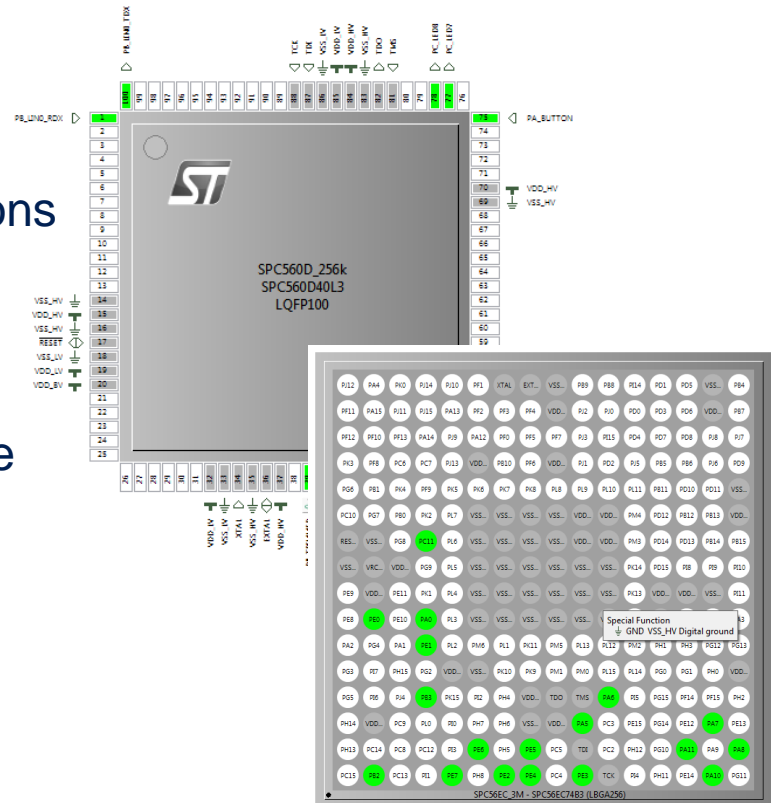

Install SPC5Studio and  
Activate Compiler

Download: Debugging software  
[www.pls-mc.com/spc5-udestk](http://www.pls-mc.com/spc5-udestk)

Install the UDE SW and add provided  
keys into UDE License Manager

SPCSStudio PinMap editor  
 STMicroelectronics user-friendly pinout editor for SPCSStudio.

- Visual configuration of I/O alternate functions
- Automatic conflict checker
- Automatic generation of configuration code
- Stand-alone configuration summary in .xls format for customer application's PCB consistency check

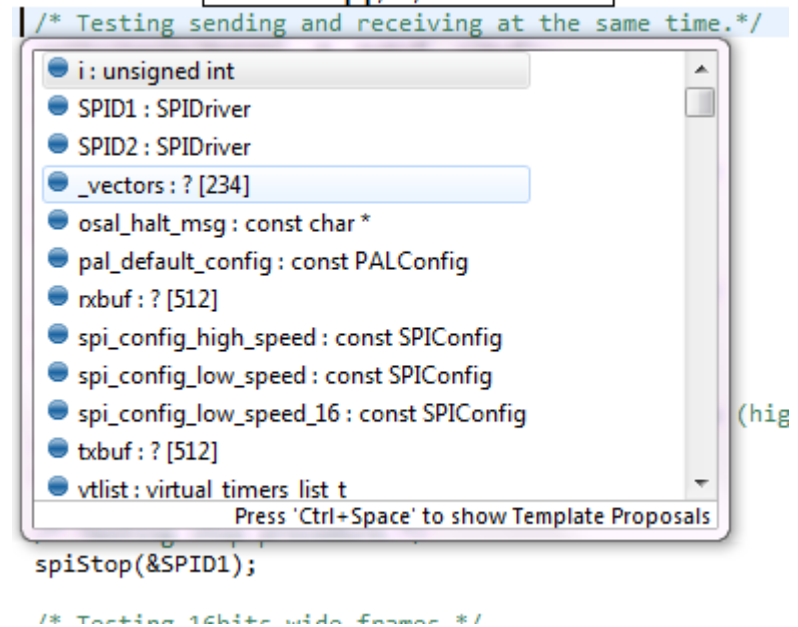

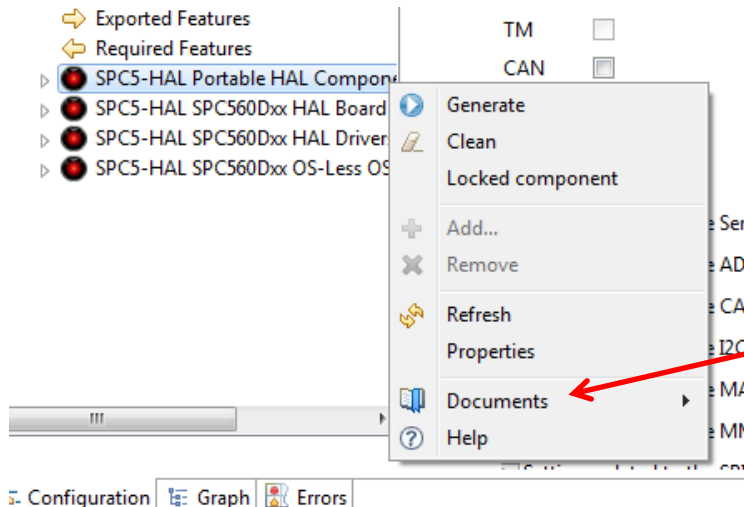

Name	Model	Cost	Availability							KODO READY

PIN MAP	Source	Free	Y	Y	Y	Y	Y				Y

- On line help for
  - SPC5Studio components API
  - Hal drivers API and functionality

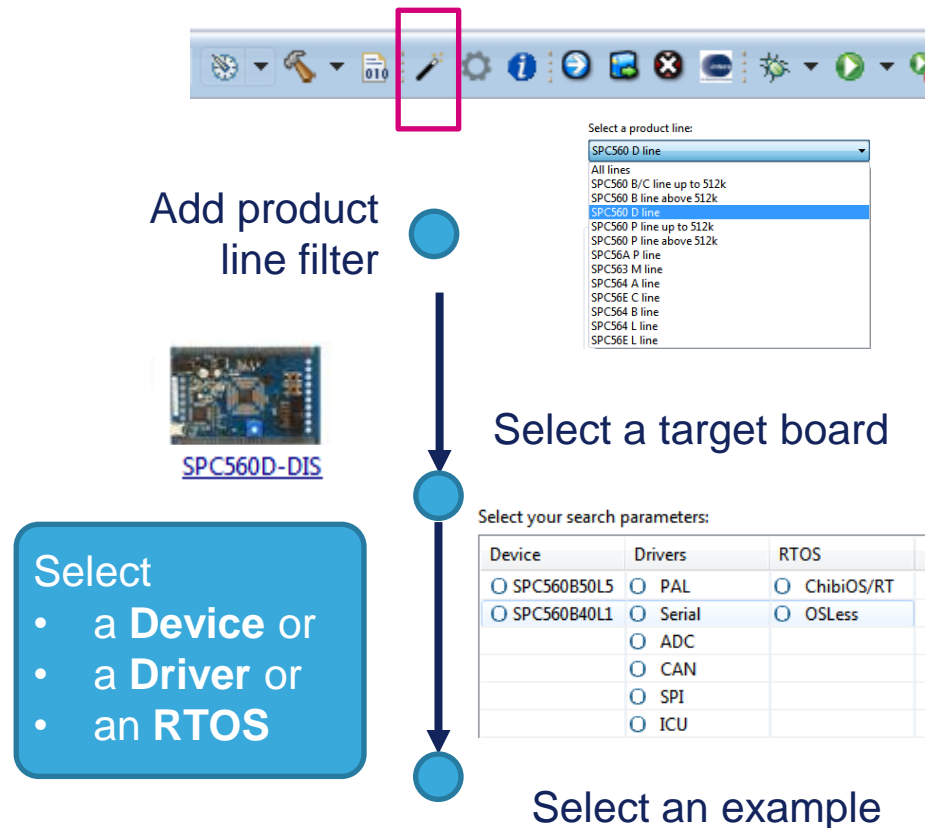

## Eclipse built-in Template Proposals

Right click on a component for documentation in chm format side by side with source code

# Application examples Wizard

- Facilitate the selection of one or more fully working application examples for Evaluation boards
- More than 50 Application examples to jump-start the project
- Built with HAL drivers
- Added in from 2.0 release onward

Select

- a Device or
- a Driver or
- an RTOS

Application Name	Description	Device	Drivers	RTOS

# Embedded Software inside SPC5Studio framework

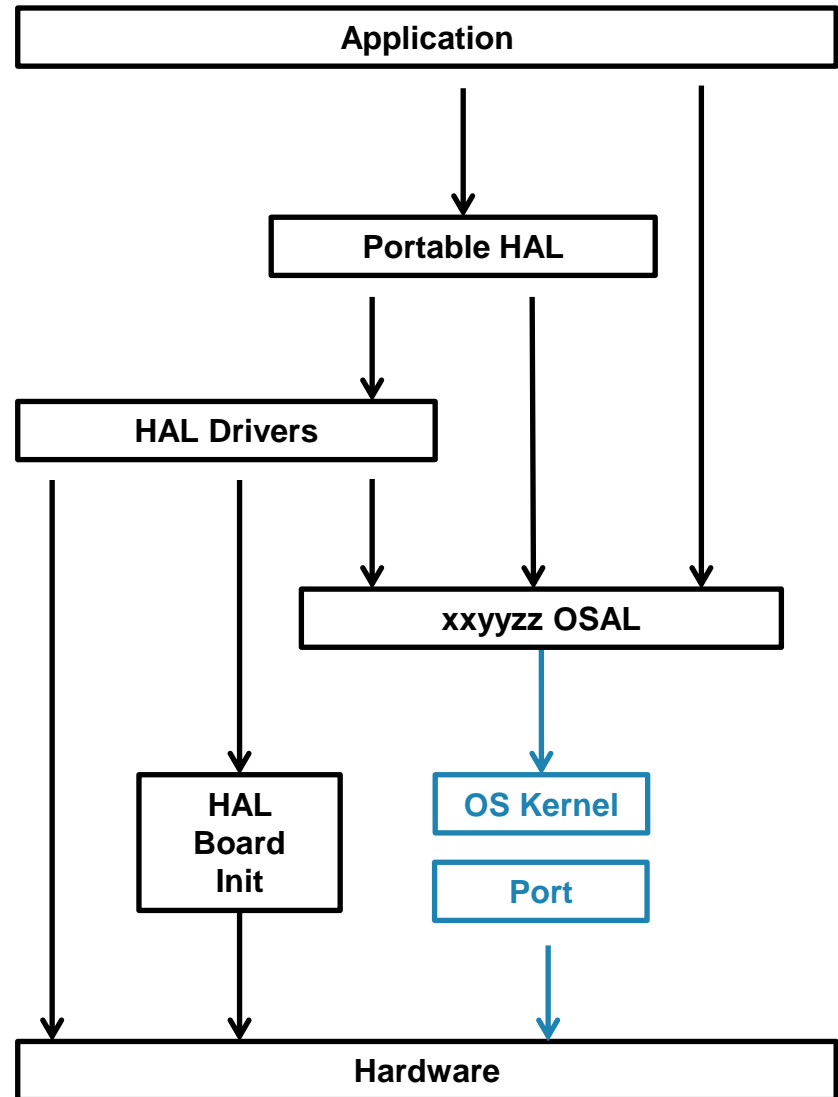

## • HAL Drivers

- Consistent programming interface across product lines
  - **Consistency:** Unique set of Application programming Interfaces (API) to abstract hardware dependent functionalities
  - **Portability:** no customer application changes with every SPC5 family microcontroller
- Key peripherals supported
  - General Purpose timer, ADC,ICU/PWM, SPI, Timers, CAN, Serial Interface
- Delivered inside SPC5Studio:
  - Drivers configuration & code generation enabled by SPC5Studio plug-in's
  - Code Portable to Professional tool chains
- On line help for API and functionality description
- Operating system independent / can be used without any operating system

# SW architecture overview

- **Application:** High level application code abstracted from hardware details
- **Portable HAL:** High level, cross platform, drivers API layer
- **OSAL:** Operating system Abstraction Layer
- **HAL Drivers:** Low level, platform-specific, drivers layer
- **OS Kernel:** Portable RTOS kernel layer
- **Port:** Kernel port layer for a specific Architecture
- **Board:** Board-specific description and initialization code
- **Hardware:** The HW platform

# Software Architecture vs. components mapping

# Embedded Software inside SPC5Studio framework

14

- Platform Components

- include startup code, interrupt handling framework I/O configuration and drivers required for debug (TIMER, UART, DMA, I/O)
- All SPC56 product line supported

- Libraries

- Flash drivers
- Lin Drivers (RPN: STSW-SPC56002FW)
- Cryptography library for SPC5 MCU's (RPN: SPC5-CRYP-LIB)

- RTOS

- ChibiOS: Portable, open source, compact and extremely fast RTOS. Designed for deeply embedded real time applications, where timings and code size are key factors. Is available for all platforms.
- mOSEK: Real-Time and networked Operating System compliant to the Osek/Vdx standard and suitable for the development of embedded real-time applications. Available for Monaco platform

## Compiler

- GNU “C” compiler for SPC56 MCU’s
- Book E, VLE and SPE Instruction set with GPL3 open source libraries
- 30 days free trial, full feature
- Integrated inside SPC5Studio
- Designed by HighTec, Distributed by ST or ST franchised distributors

## Debugger

- JTAG Debugger for SPC56 MCU’s
- Compliant with IEEE1149.1 specification
- Designed by PLS, Distributed by ST or ST franchised distributors
- Free software download:  
<http://www.pls-mc.com/spc5-udestk>

Order code	Description
SPC5-HTCOMP-NLTL	1 year node-locked support

Order code	Description
SPC5-UDESTK-EVAL	PLS USB/JTAG adapter and time unlimited software license up to 128 KB code
SPC5-UDESTK-FULL	Include PLS USB/JTAG adapter and 1-year license with full memory access
SPC5-UDEDEBG-TL	1-year license with full memory access

# Compiler Options

HighTec  
GCC for ST

HighTec Professional

Make file compatibility

Distributed by ST  
node locked option only

Inside SPC5Studio

GCC compiler + GPL3  
libraries

With support from ST and  
bug fixing support

Ultra low cost

Distributed by HighTec  
Multiple licensing options

Part of HighTec development  
environment

Commercial compiler and  
libraries, no open source

ISO 26262 certified

Professional support from  
HighTec

Lower cost compared to  
other professional products

Evaluation / Development

Production

# SPC5 studio suite use cases

- Low cost / Features rich development suite

## Key functionalities

- Use SPC5Studio wizards to leverage on all plug-ins, embedded software content and embedded compiler
- Use SPC5Studio just as eclipse project Editor and build environment to leverage on GCC compiler

- Productivity tool **adding** features to your professional development environment

## Key functionalities

- Explore quickly microcontroller features.
- Reuse code of application examples
- Manage I/O configuration
- Configure Software libraries with SPC5studio plug-in before importing them in your project
- Compiler activation not required

## If compiler is HighTec Pro

- Share code and projects with SPC5Studio with Full make file and build settings compatibility
- Optimized costs having a mix of Pro IDE and low cost (SPC5studio) IDE

# Software solutions: Autosar

- STMicroelectronics develops off the shelf software products in accordance with CMMI and AUTOMOTIVE SPICE Level 3 quality standards.

Elektrobit	BSW (ASR4.x)	RTM	Source	License(**)	Y	Y	Y	Y	Y	Y			Y

Solution for BAC 3.1 release are available from Elektrobit and got SLP10 from Vector

RTM: release to market

(\*) contact ST or authorized distributors

(\*\*) contact 3<sup>rd</sup> party

# Promotion and Evaluation Boards

- Two level of boards to satisfy all needs

- Premium Evaluation boards

- Access all peripherals, change MCU using socket and mini-modules
    - Port for JTAG and Nexus trace debuggers

- Discovery/Discovery+ Boards

- IC soldered on PCB with customer option to change it
    - Embedded debugger(\*)
    - Legacy Automotive connector (\*\*)
    - Connectivity Ports (Can / LIN)
    - Arduino-Compatible (Pictus Discovery+ only)

Promote the solution enabling immediate user operation  
Connect to other system in automotive environment  
Debug your application  
Connect extension modules with ST smart power devices  
Connect ARDUINO World

(\*) Not available on L, M & A Discovery/+  
(\*\*) Not Available on B & D line Discoveries

# SPC56 Discoveries World

## SPC56D-Discovery with SPC560D40L1

- order code: SPC560D-DIS

- Embedded debugger (up to 128Kbyte free)
- Optocoupler for USB isolation,
- All I/O accessible on connectors
- Standard connector (type B)

## SPC56L-Discovery with SPC56EL60L5

- order code: SPC56EL70-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC56M-Discovery with SPC563M64L5

- order code: SPC560M-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

## SPC56B-Discovery with SPC560B54L5

- order code: SPC560B-DIS

- Embedded debugger (up to 128Kbyte free)
- Optocoupler for USB isolation,
- All I/O accessible on connectors
- Standard connector (type B)

## SPC56P-Discovery with SPC560P50L5:

- order code: SPC560P-DISP

- Embedded detachable on board JTAG debugger (up to 128Kbyte free)
- Can, Lin Connectivity on board (included transceivers)
- Connector Arduino-Compatible
- Standard connector (type A)

## SPC56A-Discovery with SPC563A70L5

- order code: SPC564A-DISP

- Can, Lin Connectivity on board (included transceivers)
- Standard connector (type A)

# Functionality Extension boards

- Connector Type A: 4x37 Pins

MCU Boards	
SPC56EL70-DISP	SPC563M-DISP
SPC560P-DISP	SPC564A-DISP

Extension Boards	
EVAL-L9942	EVAL-L9907
EVAL-L9907-H	EVAL-L9958

- Arduino-Compatible

MCU Boards
SPC560P-DISP

  

Extension Boards
EVAL-VNH5019-P2

- Connector Type B: 2x2x36 Pins

MCU Boards	
SPC560D-DIS	SPC560B-DIS

Several solutions in design to extend the microcontroller board functionality

The addition of a connector Arduino-Compatible multiply the number of options

All ST Nucleo expansion boards will fit as well

# Discovery Boards: Special Innovation

- SPC560P-DISP Arduino-Compatible
  - Leverage on Arduino Community functional modules such as:
    - Arduino Proto Shield
    - Display Modules
    - Communication Modules
    - Motor drivers modules (with ST VNH H-Bridges)

CAN

VNH2SP30

VNH5019

LCD Button Shield

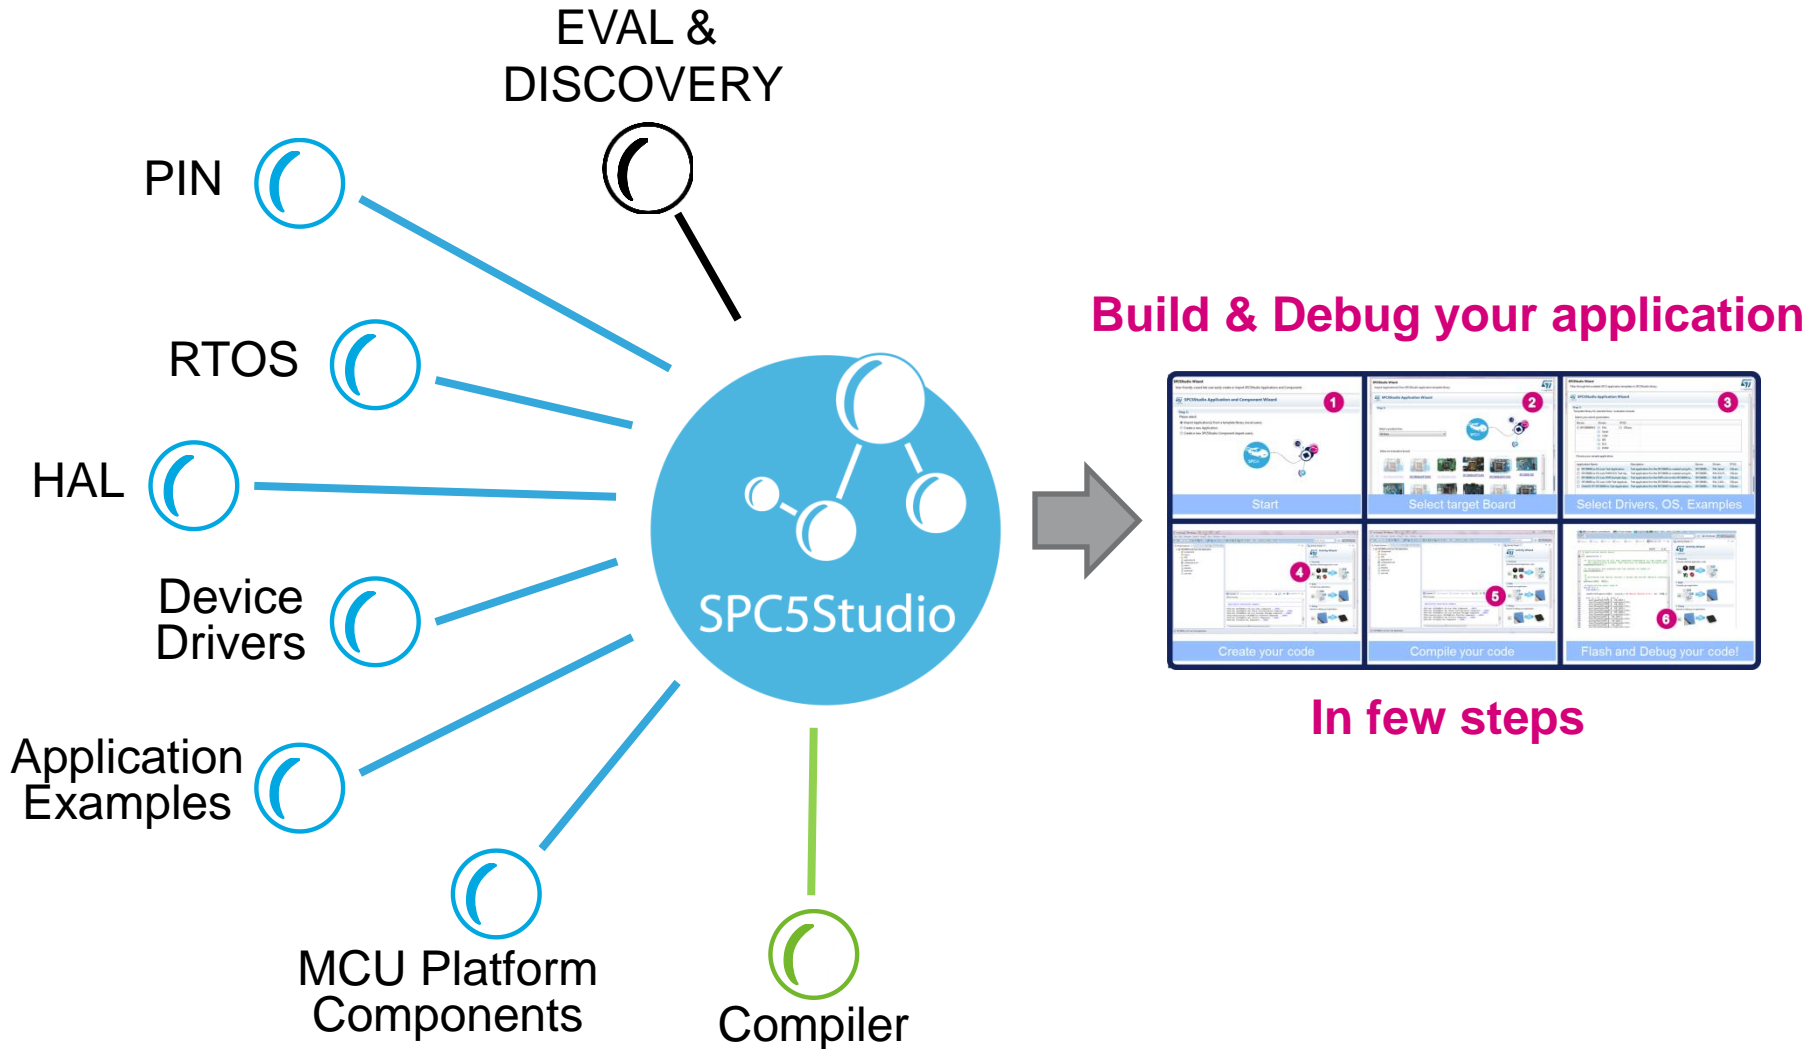

Ethernet

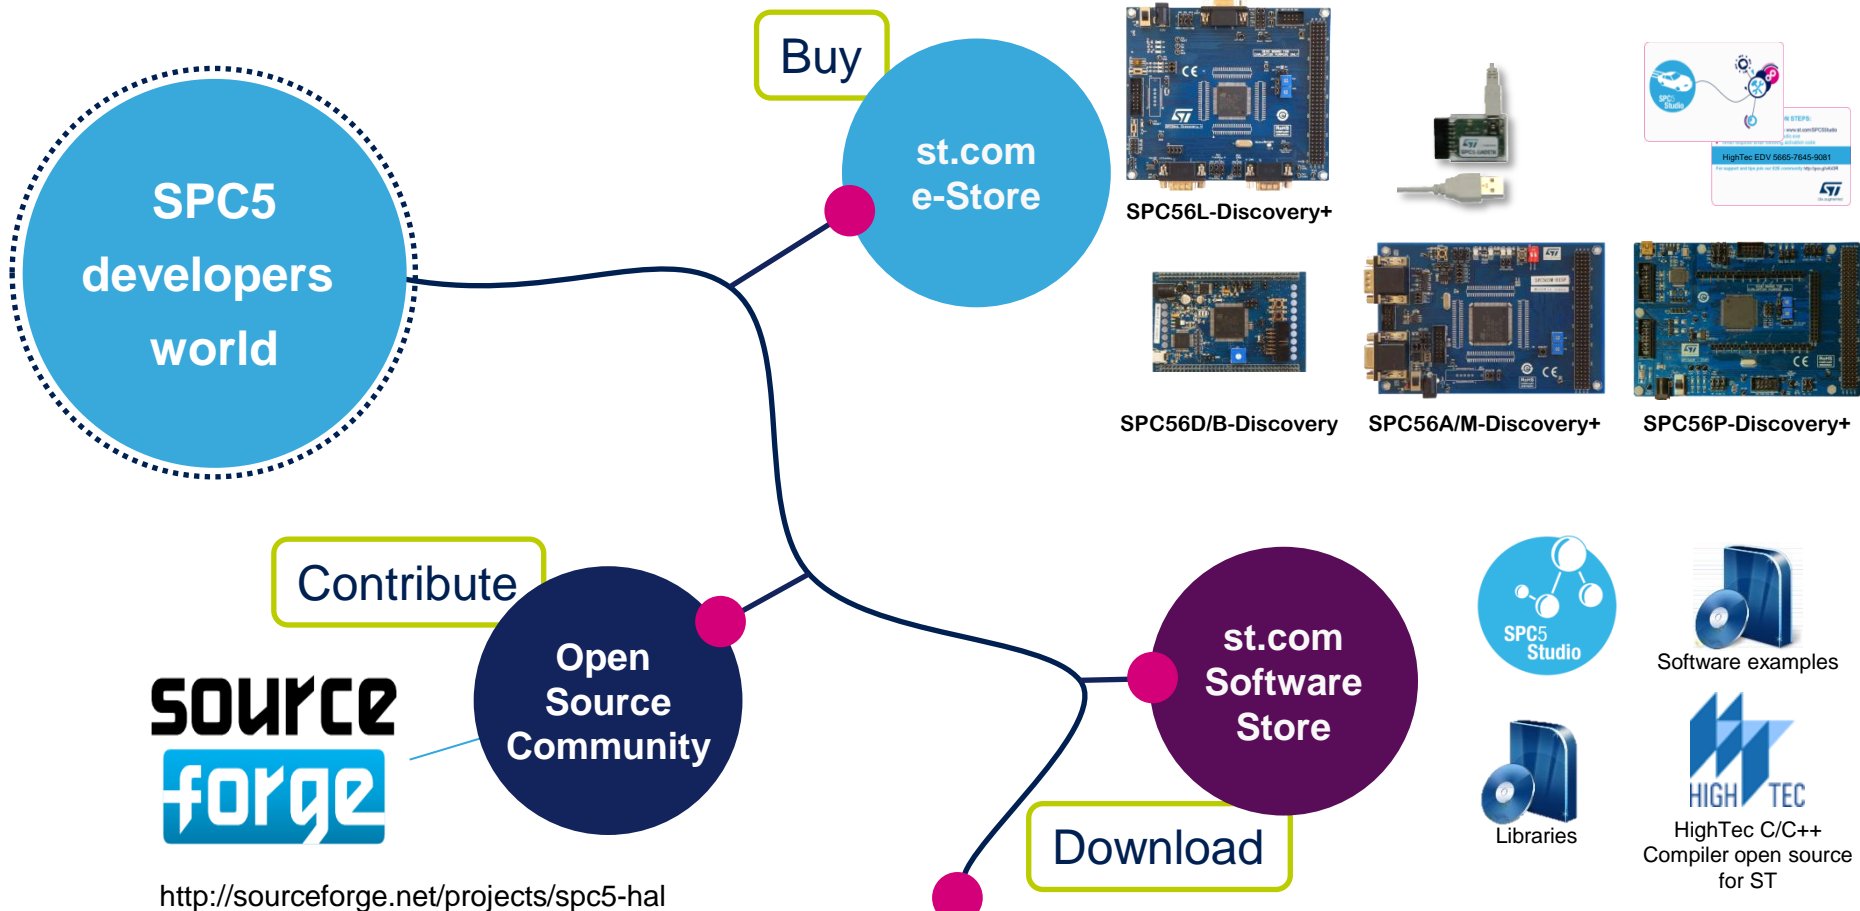

WIFI
