

## SN74AUP1G80 Low-Power Single Positive-Edge-Triggered D-Type Flip-Flop

### 1 Features

- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)
- Available in the Texas Instruments NanoStar™ Package
- Low Static-Power Consumption ( $I_{CC} = 0.9 \mu\text{A}$  Maximum)
- Low Dynamic-Power Consumption ( $C_{pd} = 4.3 \text{ pF}$  Typical at 3.3 V)
- Low Input Capacitance ( $C_i = 1.5 \text{ pF}$  Typical)
- Low Noise – Overshoot and Undershoot <10% of  $V_{CC}$
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Schmitt-Trigger Action Allows Slow Input Transition and Better Switching Noise Immunity at the Input ( $V_{hys} = 250 \text{ mV}$  Typical at 3.3 V)
- Wide Operating  $V_{CC}$  Range of 0.8 V to 3.6 V
- Optimized for 3.3-V Operation
- 3.6-V I/O Tolerant to Support Mixed-Mode Signal Operation
- $t_{pd} = 4.4 \text{ ns}$  Maximum at 3.3 V
- Suitable for Point-to-Point Applications

### 2 Applications

- Home Automation
- Factory Automation
- Test and Measurement
- Enterprise Switching
- Telecom Infrastructure
- Personal Electronics
- White Goods

### 3 Description

The AUP family is TI's premier solution to the industry's low-power needs in battery-powered portable applications. This family assures a low static- and dynamic-power consumption across the entire  $V_{CC}$  range of 0.8 V to 3.6 V, resulting in increased battery life (see [AUP – The Lowest-Power Family](#)). This product also maintains excellent signal integrity (see [Excellent Signal Integrity](#)).

This is a single positive-edge-triggered D-type flip-flop. When data at the data (D) input meets the setup time requirement, the data is transferred to the  $\bar{Q}$  output on the positive-going edge of the clock pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold-time interval, data at the D input can be changed without affecting the levels at the outputs.

NanoStar™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs when the device is powered down. This inhibits current backflow into the device which prevents damage to the device.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74AUP1G80DBV	SOT-23 (5)	1.60 mm × 2.90 mm
SN74AUP1G80DCK	SC70 (5)	1.25 mm × 2.00 mm
SN74AUP1G80DRY	SON (6)	1.00 mm × 1.45 mm
SN74AUP1G80DSF	SON (6)	1.00 mm × 1.00 mm
SN74AUP1G80YFP	DSBGA (6)	0.76 mm × 1.16 mm
SN74AUP1G80YZP	DSBGA (5)	0.89 mm × 1.39 mm
SN74AUP1G80DPW	X2SON (5)	0.80 mm × 0.80 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision E (May 2010) to Revision F</b>	<b>Page</b>
• Added DPW (X2SON) package .....	<b>1</b>
• Added <i>Device Information</i> table, <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Thermal Information</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	<b>1</b>
• Deleted <i>Ordering Information</i> table, see <i>Mechanical, Packaging, and Orderable Information</i> at the end of the data sheet .....	<b>1</b>
• Added Junction temperature, $T_J$ in <i>Absolute Maximum Ratings</i> table .....	<b>4</b>

## 5 Pin Configuration and Functions

### Pin Functions

NAME	PIN					I/O	DESCRIPTION
	DBV, DCK	DRY, DSF	YFP	YZP	DPW		
D	1	1	A1	A1	1	I	Data input
CLK	2	2	B1	B1	2	I	Positive-Edge-Triggered Clock input
GND	3	3	C1	C1	3	—	Ground pin
$\bar{Q}$	4	4	C2	C2	4	O	Inverted output
NC	—	5	B2	—	—	—	No Internal Connection
V <sub>CC</sub>	5	6	A2	A2	5	—	Positive Supply

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage	-0.5	4.6	V
V <sub>I</sub>	Input voltage <sup>(2)</sup>	-0.5	4.6	V
V <sub>O</sub>	Voltage range applied to any output in the high-impedance or power-off state <sup>(2)</sup>	-0.5	4.6	V
V <sub>O</sub>	Voltage range applied to any output in the high or low state <sup>(2)</sup>	-0.5	V <sub>CC</sub> + 0.5	V
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0	-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0	-50	mA
I <sub>O</sub>	Continuous output current		±20	mA
	Continuous current through V <sub>CC</sub> or GND		±50	mA
T <sub>J</sub>	Junction temperature		150	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 6.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	1000

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

 See <sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage	0.8	3.6	V
V <sub>IH</sub>	High-level input voltage	V <sub>CC</sub> = 0.8 V	V <sub>CC</sub>	V
		V <sub>CC</sub> = 1.1 V to 1.95 V	0.65 × V <sub>CC</sub>	
		V <sub>CC</sub> = 2.3 V to 2.7 V	1.6	
		V <sub>CC</sub> = 3 V to 3.6 V	2	
V <sub>IL</sub>	Low-level input voltage	V <sub>CC</sub> = 0.8 V	0	V
		V <sub>CC</sub> = 1.1 V to 1.95 V	0.35 × V <sub>CC</sub>	
		V <sub>CC</sub> = 2.3 V to 2.7 V	0.7	
		V <sub>CC</sub> = 3 V to 3.6 V	0.9	
V <sub>I</sub>	Input voltage	0	3.6	V
V <sub>O</sub>	Output voltage	0	V <sub>CC</sub>	V
I <sub>OH</sub>	High-level output current <sup>(2)</sup>	V <sub>CC</sub> = 0.8 V	-20	mA
		V <sub>CC</sub> = 1.1 V	-1.1	
		V <sub>CC</sub> = 1.4 V	-1.7	
		V <sub>CC</sub> = 1.65	-1.9	
		V <sub>CC</sub> = 2.3 V	-3.1	
		V <sub>CC</sub> = 3 V	-4	

(1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to assure proper device operation. See *Implications of Slow or Floating CMOS Inputs*, SCBA004.

(2) Defined by the signal integrity requirements and design-goal priorities.

## Recommended Operating Conditions (continued)

See <sup>(1)</sup>

		MIN	MAX	UNIT	
$I_{OL}$	Low-level output current <sup>(2)</sup>	$V_{CC} = 0.8\text{ V}$	20	$\mu\text{A}$	
		$V_{CC} = 1.1\text{ V}$	1.1	mA	
		$V_{CC} = 1.4\text{ V}$	1.7		
		$V_{CC} = 1.65\text{ V}$	1.9		
		$V_{CC} = 2.3\text{ V}$	3.1		
		$V_{CC} = 3\text{ V}$	4		
$\Delta t/\Delta v$	Input transition rise or fall rate	$V_{CC} = 0.8\text{ V to }3.6\text{ V}$		200	ns/V
$T_A$	Operating free-air temperature	-40	85	°C	

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	SN74AUP1G80							UNIT	
	DBV (SOT)	DCK (SC70)	DRY (SON)	DSF (SON)	YFP (DSBGA)	YZP (DSBGA)	DPW (X2SON)		
	5 PINS	5 PINS	6 PINS	6 PINS	6 PINS	5 PINS	5 PINS

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics: $T_A = 25^\circ\text{C}$

 over recommended operating free-air temperature range,  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$V_{CC}$	MIN	TYP	MAX	UNIT
$V_{OH}$	$I_{OH} = -20 \mu\text{A}$	0.8 V to 3.6 V	$V_{CC} - 0.1$			V
	$I_{OH} = -1.1 \text{ mA}$	1.1 V	$0.75 \times V_{CC}$			
	$I_{OH} = -1.7 \text{ mA}$	1.4 V	1.11			
	$I_{OH} = -1.9 \text{ mA}$	1.65 V	1.32			
	$I_{OH} = -2.3 \text{ mA}$	2.3 V	2.05			
	$I_{OH} = -3.1 \text{ mA}$		1.9			
	$I_{OH} = -2.7 \text{ mA}$	3 V	2.72			
	$I_{OH} = -4 \text{ mA}$		2.6			
$V_{OL}$	$I_{OL} = 20 \mu\text{A}$	0.8 V to 3.6 V			0.1	V
	$I_{OL} = 1.1 \text{ mA}$	1.1 V			$0.3 \times V_{CC}$	
	$I_{OL} = 1.7 \text{ mA}$	1.4 V			0.31	
	$I_{OL} = 1.9 \text{ mA}$	1.65 V			0.31	
	$I_{OL} = 2.3 \text{ mA}$	2.3 V			0.31	
	$I_{OL} = 3.1 \text{ mA}$				0.44	
	$I_{OL} = 2.7 \text{ mA}$	3 V			0.31	
	$I_{OL} = 4 \text{ mA}$				0.44	
$I_I$ D or CLK input	$V_I = \text{GND to } 3.6 \text{ V}$	0 V to 3.6 V			0.1	$\mu\text{A}$
$I_{off}$	$V_I$ or $V_O = 0 \text{ V to } 3.6 \text{ V}$	0 V			0.2	$\mu\text{A}$
$\Delta I_{off}$	$V_I$ or $V_O = 0 \text{ V to } 3.6 \text{ V}$	0 V to 0.2 V			0.2	$\mu\text{A}$
$I_{CC}$	$V_I = \text{GND or } V_{CC} \text{ to } 3.6 \text{ V, } I_O = 0$	0.8 V to 3.6 V			0.5	$\mu\text{A}$
$\Delta I_{CC}$	$V_I = V_{CC} - 0.6 \text{ V, }^{(1)} I_O = 0$	3.3 V			40	$\mu\text{A}$
$C_i$	$V_I = V_{CC} \text{ or GND}$	0 V	1.5			pF
		3.6 V	1.5			
$C_o$	$V_O = \text{GND}$	0 V	3			pF

 (1) One input at  $V_{CC} - 0.6 \text{ V}$ , other input at  $V_{CC}$  or GND

## 6.6 Electrical Characteristics: $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$

over recommended operating free-air temperature range,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$V_{CC}$	MIN	MAX	UNIT
$V_{OH}$	$I_{OH} = -20\ \mu\text{A}$	0.8 V to 3.6 V	$V_{CC} - 0.1$		V
	$I_{OH} = -1.1\ \text{mA}$	1.1 V	$0.7 \times V_{CC}$		
	$I_{OH} = -1.7\ \text{mA}$	1.4 V	1.03		
	$I_{OH} = -1.9\ \text{mA}$	1.65 V	1.3		
	$I_{OH} = -2.3\ \text{mA}$	2.3 V	1.97		
	$I_{OH} = -3.1\ \text{mA}$		1.85		
	$I_{OH} = -2.7\ \text{mA}$	3 V	2.67		
	$I_{OH} = -4\ \text{mA}$		2.55		
$V_{OL}$	$I_{OL} = 20\ \mu\text{A}$	0.8 V to 3.6 V		0.1	V
	$I_{OL} = 1.1\ \text{mA}$	1.1 V		$0.3 \times V_{CC}$	
	$I_{OL} = 1.7\ \text{mA}$	1.4 V		0.37	
	$I_{OL} = 1.9\ \text{mA}$	1.65 V		0.35	
	$I_{OL} = 2.3\ \text{mA}$	2.3 V		0.33	
	$I_{OL} = 3.1\ \text{mA}$			0.45	
	$I_{OL} = 2.7\ \text{mA}$	3 V		0.33	
	$I_{OL} = 4\ \text{mA}$			0.45	
$I_I$ D or CLK input	$V_I = \text{GND to } 3.6\ \text{V}$	0 V to 3.6 V		0.5	$\mu\text{A}$
$I_{off}$	$V_I$ or $V_O = 0\ \text{V to } 3.6\ \text{V}$	0 V		0.6	$\mu\text{A}$
$\Delta I_{off}$	$V_I$ or $V_O = 0\ \text{V to } 3.6\ \text{V}$	0 V to 0.2 V		0.6	$\mu\text{A}$
$I_{CC}$	$V_I = \text{GND or } V_{CC}\ \text{to } 3.6\ \text{V}, I_O = 0$	0.8 V to 3.6 V		0.9	$\mu\text{A}$
$\Delta I_{CC}$	$V_I = V_{CC} - 0.6\ \text{V}, I_O = 0$ <sup>(1)</sup>	3.3 V		50	$\mu\text{A}$

(1) One input at  $V_{CC} - 0.6\ \text{V}$ , other input at  $V_{CC}$  or GND

## 6.7 Timing Requirements

over recommended operating free-air temperature range,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$  (unless otherwise noted) (see [Figure 3](#))

		$V_{CC}$	MIN	TYP <sup>(1)</sup>	MAX	UNIT
$f_{clock}$	Clock frequency	0.8 V			20	MHz
		1.2 V $\pm$ 0.1 V			80	
		1.5 V $\pm$ 0.1 V			120	
		1.8 V $\pm$ 0.15 V			160	
		2.5 V $\pm$ 0.2 V			220	
		3.3 V $\pm$ 0.3 V			260	
$t_w$	Pulse duration, CLK high or low	0.8 V	5.5

- NOTES:
- $C_L$  includes probe and jig capacitance.
  - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10 \text{ MHz}$ ,  $Z_O = 50 \Omega$ ,  $t_r/t_f = 3 \text{ ns}$ .
  - The outputs are measured one at a time, with one transition per measurement.
  - $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - All parameters and waveforms are not applicable to all devices.

Figure 4. Load Circuit and Voltage Waveforms

## 8 Detailed Description

### 8.1 Overview

The SN74AUP1G80 is a single positive-edge-triggered D-type flip-flop. Data at the input (D) is transferred to the output ( $\bar{Q}$ ) on the positive-going edge of the clock pulse when the setup time requirement is met. Because the clock triggering occurs at a voltage level, it is not directly related to the rise time of the clock pulse. This allows for data at the input to be changed without affecting the level at the output, following the hold-time interval.

### 8.2 Functional Block Diagram

Figure 5. Logic Diagram (Positive Logic)

### 8.3 Feature Description

#### 8.3.1 Balanced CMOS Push-Pull Outputs

A balanced output allows the device to sink and source similar currents. The drive capability of this device may create fast edges into light loads so routing and load conditions should be considered to prevent ringing. Additionally, the outputs of this device are capable of driving larger currents than the device can sustain without being damaged. It is important for the power output of the device to be limited to avoid damage due to over-current. The electrical and thermal limits defined in the [Absolute Maximum Ratings](#) table must be followed at all times.

#### 8.3.2 Standard CMOS Inputs

Standard CMOS inputs are high impedance and are typically modeled as a resistor in parallel with the input capacitance given in the [Electrical Characteristics:  \$T\_A = 25^\circ\text{C}\$](#)  table. The worst case resistance is calculated with the maximum input voltage, given in the [Absolute Maximum Ratings](#) table, and the maximum input leakage current, given in the [Electrical Characteristics:  \$T\_A = 25^\circ\text{C}\$](#)  table, using ohm's law ( $R = V \div I$ ).

Signals applied to the inputs need to have fast edge rates, as defined by  $\Delta t/\Delta v$  in [Recommended Operating Conditions](#) table to avoid excessive currents and oscillations. If a slow or noisy input signal is required, a device with a Schmitt-trigger input should be used to condition the input signal prior to the standard CMOS input.

#### 8.3.3 Clamp Diodes

The inputs and outputs to this device have negative clamping diodes.

#### CAUTION

Voltages beyond the values specified in the [Absolute Maximum Ratings](#) table can cause damage to the device. The input negative-voltage and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

## Feature Description (continued)

Figure 6. Electrical Placement of Clamping Diodes for Each Input and Output

### 8.3.4 Partial Power Down ( $I_{off}$ )

The inputs and outputs for this device enter a high-impedance state when the supply voltage is 0 V. The maximum leakage into or out of any input or output pin on the device is specified by  $I_{off}$  in the [Electrical Characteristics:  \$T\_A = 25^\circ\text{C}\$](#)  table.

### 8.3.5 Over-Voltage Tolerant Inputs

Input signals to this device can be driven above the supply voltage so long as they remain below the maximum input voltage value specified in the [Absolute Maximum Ratings](#) table.

## 8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74AUP1G80 device.

Table 1. Function Table

INPUTS		OUTPUT
CLK	D	$\overline{Q}$
↑	H	L
↑	L	H
L or H	X	$\overline{Q}_0$

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

A useful application for the SN74AUP1G80 is using it as a frequency divider. By feeding back the output ( $\bar{Q}$ ) to the input (D), the output toggles on every rising edge of the clock waveform. The output goes HIGH once every two clock cycles, so essentially the frequency of the clock signal is divided by a factor of two. The device does not have preset or clear functions so the initial state of the output is unknown. This application implements the use of an override pin to initially set the input HIGH or LOW. Initialization is not needed, but should be kept in mind. Post initialization, the Override input is set to a high-impedance mode, or it can be used to force a HIGH or LOW output.

### 9.2 Typical Application

**Figure 7. Clock Frequency Division**

#### 9.2.1 Design Requirements

For this application, a resistor must be placed on the feedback line in order for the initialization voltage from the override input to overpower the signal coming from the output ( $\bar{Q}$ ). Without a resistor the state at the input would be unknown as the output of the SN74AUP1G80 is driving the line separate from the Override input.

The SN74AUP1G80 device uses CMOS technology and has balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits.

#### 9.2.2 Detailed Design Procedure

1. Recommended input conditions:
  - For rise time and fall time specifications, see  $\Delta t/\Delta v$  in the [Recommended Operating Conditions](#) table.
  - For specified high and low levels, see  $V_{IH}$  and  $V_{IL}$  in the [Recommended Operating Conditions](#) table.
  - Input voltages are recommended to not go below 0 V and not exceed 4.6 V for any  $V_{CC}$ . See the [Absolute Maximum Ratings](#) table.
2. Recommended output conditions:
  - Load currents should not exceed  $\pm 20$  mA. See the [Absolute Maximum Ratings](#) table.
  - Output voltages are recommended to not go below 0 V and not exceed the  $V_{CC}$  voltage. See the [Absolute Maximum Ratings](#) table.
3. Feedback resistor:
  - A 10-k $\Omega$  resistor is chosen to bias the input so the Override input can initialize the input and output. The resistor value is important because a resistance too high, such as 1 M $\Omega$ , would cause too much of a voltage drop, causing the output to no longer be able to drive the input. On the other hand, a resistor too low, such as a 1  $\Omega$ , would not bias enough and might cause bus contention between the  $\bar{Q}$  output and the override input, possibly damaging the device.

## Typical Application (continued)

### 9.2.3 Application Curve

Figure 8. Frequency Division

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating listed in the *Recommended Operating Conditions* table. A 0.1- $\mu$ F bypass capacitor is recommended to be connected from the VCC terminal to GND to prevent power disturbance. To reject different frequencies of noise, use multiple bypass capacitors in parallel. Capacitors with values of 0.1  $\mu$ F and 1  $\mu$ F are commonly used in parallel. The bypass capacitor must be installed as close to the power terminal as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

When a printed-circuit board (PCB) trace turns a corner at a 90° angle, a reflection can occur. A reflection occurs primarily because of the change of width of the trace. At the apex of the turn, the trace width increases to 1.414 times the width. This increase upsets the transmission-line characteristics, especially the distributed capacitance and self-inductance of the trace which results in the reflection. Not all PCB traces can be straight and therefore some traces must turn corners. Figure 9 shows progressively better techniques of rounding corners. Only the last example (BEST) maintains constant trace width and minimizes reflections.

### 11.2 Layout Example

Figure 9. Trace Example

## 12 Device and Documentation Support

### 12.1 Documentation Support

#### 12.1.1 Related Documentation

For related documentation see the following:

#### 12.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 12.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

#### 12.4 Trademarks

NanoStar, E2E are trademarks of Texas Instruments.  
All other trademarks are the property of their respective owners.

#### 12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 12.6 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

<sup>(2)</sup> **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DRY (R-PUSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

4207181/F 12/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. SON (Small Outline No-Lead) package configuration.
  - $\triangle D$  The exposed lead frame feature on side of package may or may not be present due to alternative lead frame designs.
  - E. This package complies to JEDEC MO-287 variation UFAD.
  - $\triangle F$  See the additional figure in the Product Data Sheet for details regarding the pin 1 identifier shape.

DRY (R-PUSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
  - Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

DBV (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - D. Falls within JEDEC MO-178 Variation AA.

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

DSF (S-PX2SON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

4210277/D 05/12

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads. If 2 mil solder mask is outside PCB vendor capability, it is advised to omit solder mask.
  - E. Maximum stencil thickness 0,1016 mm (4 mils). All linear dimensions are in millimeters.
  - F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - G. Suggest stencils cut with lasers such as Fiber Laser that produce the greatest positional accuracy.
  - H. Component placement force should be minimized to prevent excessive paste block deformation.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
