Description

The 74LS04 Hex Inverter is fabricated using a 2µm 40V Bipolar process. The device contains six independent inverters with standard push-pull outputs which perform the Boolean function $Y = \bar{A}$ in positive logic.

Features:

- High speed – 19ns (Typ) propagation delay
- Direct drop-in replacement for obsolete components in long term programs.

Ordering Information

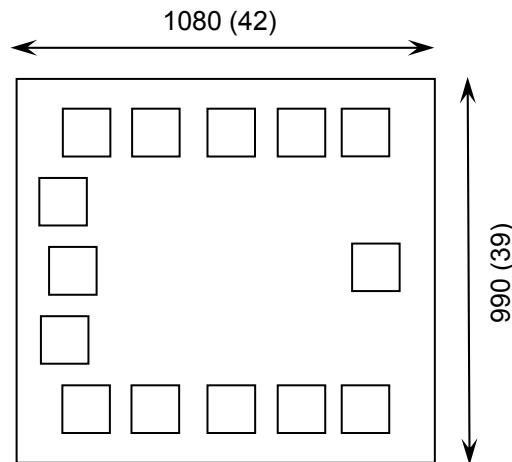

The following part suffixes apply:

- No suffix - MIL-STD-883 /2010B Visual Inspection
