LB1292**6-Channel Driver Array**

The LB1292 is designed for interfacing low level device with fluorescent display tube. 6 independent Darlington output stages can be used to drive digits or segments. With pull-down equivalent resistor built in, no external resistor to prevent ghost is required. When input voltage is at low level, output becomes active.

Features

- . 6 independent Darlington drivers.
- . Capable of driving digits or segments.
- . On-chip sink current circuit for pull-down
- . Rated at 55V/25mA
