

ASSP

3-Channel 8-Bit D/A Converter

MB40988

■ DESCRIPTION

The MB40988 is an 8-bit resolution ultra high-speed digital-to-analog converter, designed for video processing applications.

The MB40988 has 8-bit resolution 3 channel D/A converters. Digital signals are input to the 8-bit digital input ports, and the input digital data are converted to the analog signals in minimum 80 Mega sample per seconds (MSPS).

The analog output voltage is provided in a range of DC +3V to +5V (2Vp-p level) .

The MB40988 is fabricated by the Fujitsu's advanced bipolar process and housed in a 48-pin plastic QFP.

The MB40988 is designed for video signal processing applications, and it is suitable for TVs and VCRs.

■ FEATURES

- 8-bit x 3 channels D/A converters
- Max. 80 MHz input clock frequency providing 80 MSPS data conversion rate
- Linearity error : Max. +/-0.2%
- Analog input voltage range : 3V to 5V (2Vp-p level)
- Digital input voltage level : TTL level

(Continued)

■ PACKAGE

48 pin, Plastic QFP

(FPT-48P-M15)

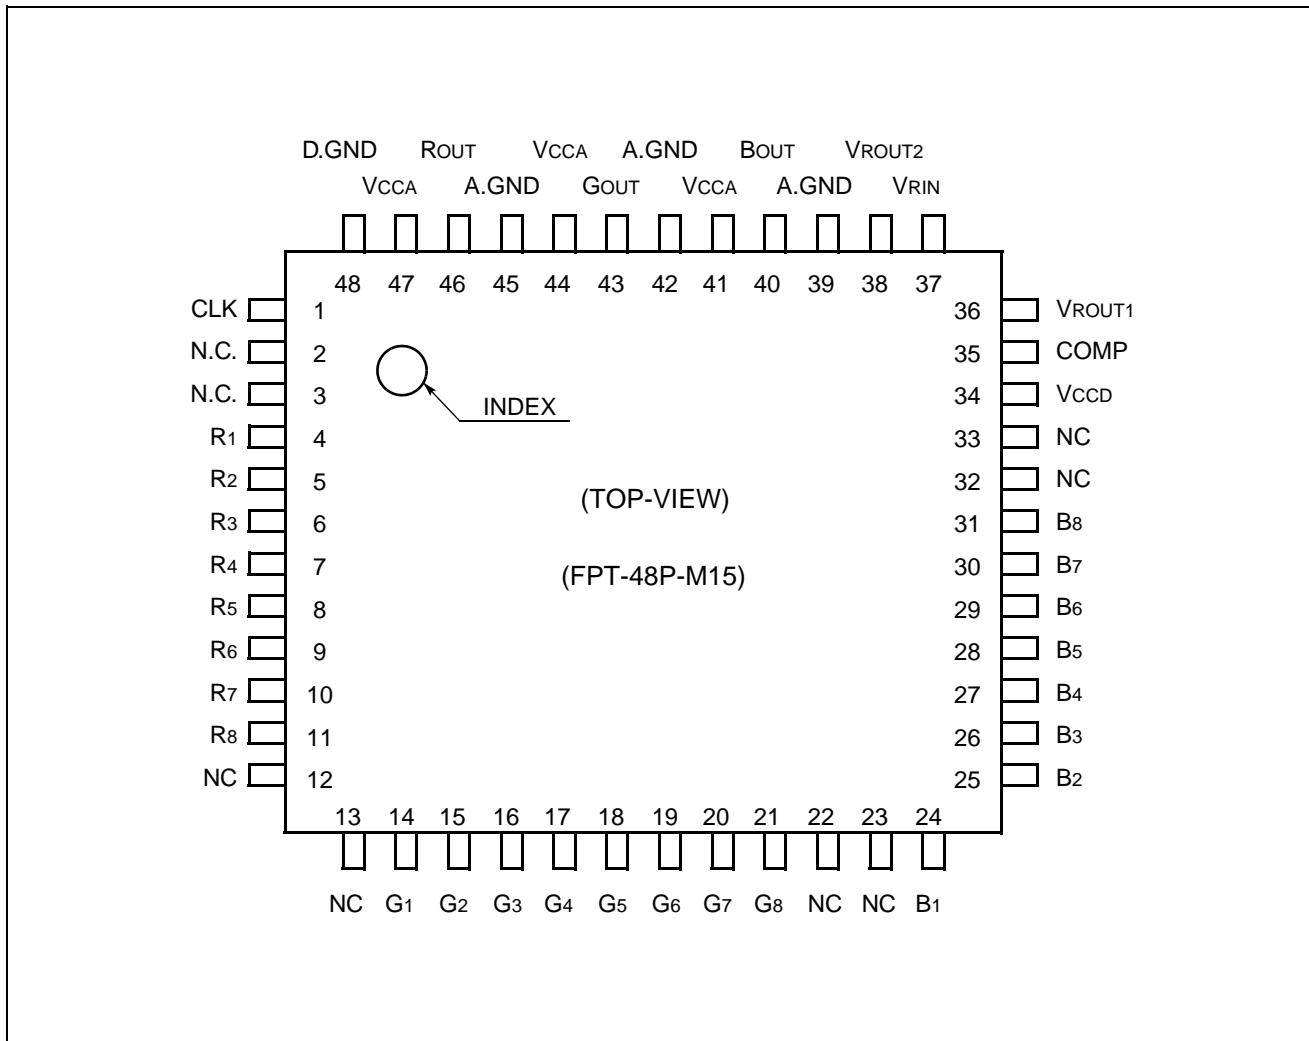

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.

MB40988

(Continued)

- On-chip reference voltage outputs :
 - Output by resistor divided ($0.6 \times V_{CCA}$)
 - Output by band gap reference ($V_{CCA} - 2[V]$)
- Low power consumption : Typical 440mW at 2Vp-p analog output voltage
 Typical 350mW at 1Vp-p analog output voltage
- Single +5V power supply
- Operating temperature range : -20°C to +70°C
- Fujitsu's advanced bipolar process
- Package : 48-pin plastic QFP (Suffix : -PF)

■ PIN ASSIGNMENT

■ PIN DESCRIPTION

Pin No.	Symbol	Type	Name & Function
Power Supply			
34	VCCD	—	+5V DC power supply pins for digital block.
48	D. GND	—	Ground pin for digital block.
41, 44, 47	VCCA	—	DC power supply pins for analog block.
39, 42, 45	A. GND	—	Ground pins for analog block.
Clock			
1	CLK	I	Clock input pin.
Digital Input			
4 5 6 7 8 9 10 11	R1 R2 R3 R4 R5 R6 R7 R8	I	Digital data input pins for R channel. 8-bit data is input to the pins. The R ₁ pin is the MSB and the R ₈ pin is the LSB.
14 15 16 17 18 19 20 21	G1 G2 G3 G4 G5 G6 G7 G8	I	Digital data input pins for G channel. 8-bit data is input to the pins. The G ₁ pin is the MSB and the G ₈ pin is the LSB.
24 25 26 27 28 29 30 31	B1 B2 B3 B4 B5 B6 B7 B8	I	Digital data input pins for B channel. 8-bit data is input to the pins. The B ₁ pin is the MSB and the B ₈ pin is the LSB.

(Continued)

MB40988

(Continued)

Pin No.	Symbol	Type	Name & Function
Analog Output			
46	ROUT	O	Analog signal output pin for R channel.
43	GOUT	O	Analog signal output pin for G channel.
40	BOUT	O	Analog signal output pin for B channel.
Reference Voltage			
37	VRIN	I	Reference voltage input pin. This pin is used to set the analog output dynamic range. When the internal reference voltage is used, this pin is connected with VROUT1 pin (36 pin) or VROUT2 pin (38 pin). When the reference voltage is supplied from the external generator, 2.65V to 4.3V or $V_{CCA} - V_{RIN} = 0.7V$ to 2.2V is input to this pin.
36	VROUT1	O	Reference voltage output #1 pin. The output voltage is set to $0.6 \times V_{CCA}$ by the resistor divided method. When this pin is connected with VRIN pin (37 pin), an analog voltage is output from this pin in a range of $0.6 \times V_{CCA}$ to V_{CCA} .
38	VROUT2	O	Reference voltage output #2 pin. The output voltage is set to $V_{CCA} - 2V$ by the band-gap reference method. When this pin is connected with VRIN pin (37 pin), an analog voltage is output from this pin in a range of $V_{CCA} - 2V$ to V_{CCA} .
Compensation Capacitor			
35	COMP	—	Phase compensation capacitor pin. A phase compensation capacitor of $0.1\mu F$ or greater is connected between this pin and A. GND pin.
No Connection			
2, 3, 12, 13, 22, 23, 32, 33	NC	—	No connection, Leave those pins open.

■ ABSOLUTE MAXIMUM RATINGS

(A. GND = D. GND = 0V)

Parameter	Symbol	Condition	Rating	Unit
Power supply voltage	V_{CCA}, V_{CCD}	—	-0.5 to +7.0	V
Power supply voltage difference	$V_{CCD} - V_{CCA}$	—	1.5	V
Analog reference voltage	V_{RIN}	—	-0.5 to $V_{CCA} + 0.5$	V
Digital input voltage	V_{ID}	—	-0.5 to +7.0	V
Storage temperature	T_{stg}	—	-55 to +125	°C

Note: Permanent device damage may occur if the above **Absolute Maximum Ratings** are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

■ RECOMMENDED OPERATING CONDITIONS

(A. GND = D. GND = 0V)

Parameter	Symbol	Condition	Value			Unit
			Min.	Typ.	Max.	
Power supply voltage	V_{CCA}, V_{CCD}	—	4.75	5.00	5.25	V
Power supply voltage difference	$V_{CCA} - V_{CCD}$	—	-0.2	—	0.2	V
Analog reference voltage	$V_{CCA} - V_{RIN}$	—	0.70	2.00	2.20	V
	V_{RIN}	—	2.65	3.00	4.30	V
Digital "H" level input voltage	V_{IHD}	—	2.0	—	—	V
Digital "L" level input voltage	V_{ILD}	—	—	—	0.8	V
Clock frequency	f_{CLK}	—	—	—	80	MHz
Setup time	t_{SU}	—	2.0	—	—	ns
Hold time	t_h	—	4.0	—	—	ns
Minimum clock "H" level pulse width	t_{wH}	—	5.0	—	—	ns
Minimum clock "L" level pulse width	t_{wL}	—	5.0	—	—	ns
Phase compensation capacitance	C_{COMP}	—	1.0	—	—	μF
Operating ambient temperature	T_{OP}	—	0	—	70	°C

■ ELECTRICAL CHARACTERISTICS

(Recommended Operating Conditions Otherwise Noted)

1. DC Characteristics

Parameter	Symbol	Value			Unit	Remark
		Min.	Typ.	Max.		
Resolution	—	—	—	8	bit	—
Linearity error	LE	—	—	±0.2	%	DC Accuracy
Digital "H" level input current	I _{IHD}	—	—	20	μA	V _{IHD} = 2.7 (V)
Digital "L" level input current	I _{ILD}	-100	—	—	μA	V _{ILD} = 0.4 (V)
Reference input current	I _{RIN}	—	—	10	μA	V _{RIN} = 3.000 (V)
Reference voltage (Resister divided)	V _{ROUT1}	2.900	3.000	3.100	V	V _{CCA} = V _{CCD} = 5.00 (V)
Reference voltage (BGR)	V _{ROUT2}	V _{CCA} -2.100	V _{CCA} -2.000	V _{CCA} -1.900	V	—
Reference voltage (BGR)	—	—	100	—	ppm/°C	—
RGB output voltage ratio	FSR	0	—	6	%	V _{CCA} = V _{CCD} = 5.00 (V)
Full-scale output voltage	V _{OFS}	V _{CCA} -20	V _{CCA}	—	mV	—
Zero-scale output voltage	V _{OZS}	2.938	3.008	3.078	V	V _{CCA} = V _{CCD} = 5.00 (V) V _{RIN} = 3.000 (V)
Output resistance	R _O	192	240	288	Ω	T _a = 25°C
Supply current	I _{CC}	—	80*	147	mA	V _{CCA} = V _{CCD} = 5.25 (V) V _{RIN} = V _{ROUT1}

* : V_{CCA} = V_{CCD} = 5.00V

2. AC Characteristics

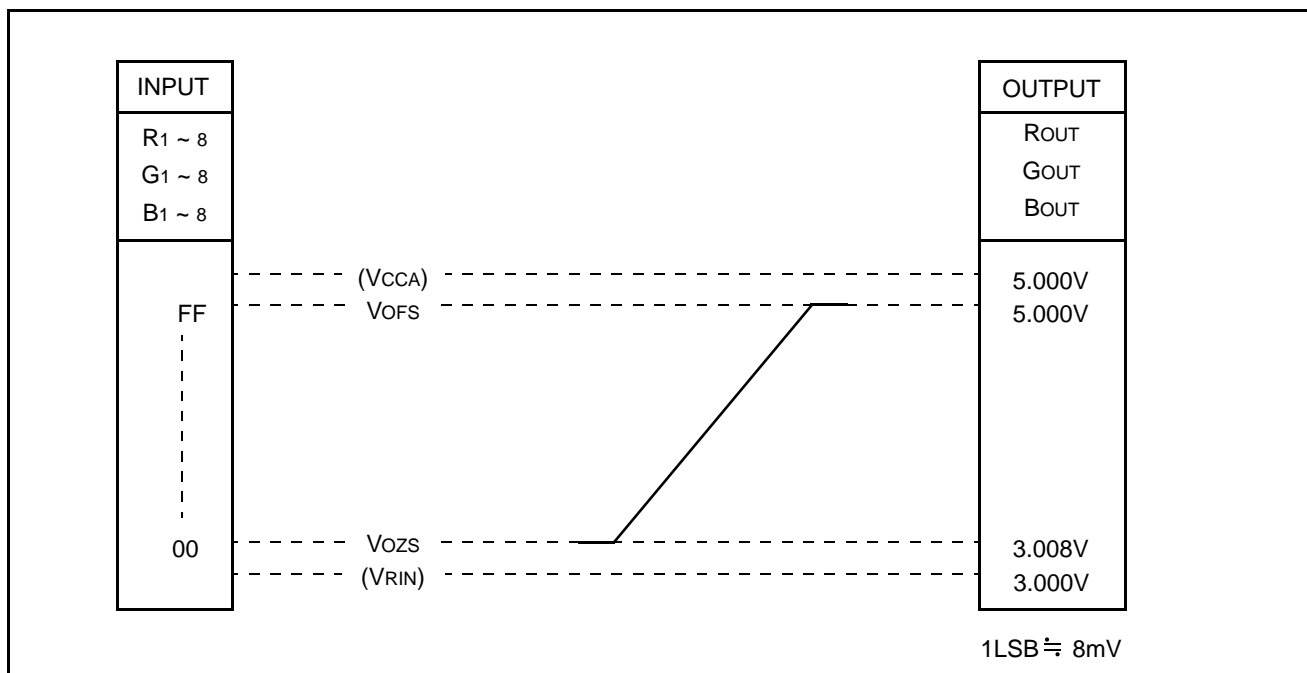

Parameter	Symbol	Value			Unit	Remark
		Min.	Typ.	Max.		
Maximum conversion rate	F _s	80	—	—	MSPS	Terminated A. OUT pin with 240Ω, C _L = 15pF
Output propagation delay time	t _{pd}	—	7	—	ns	
Output rising time	t _r	—	5	—	ns	
Output falling time	t _f	—	5	—	ns	
Setting time	t _{set}	—	15	—	ns	

MB40988

AC TIMING CHART

DAC OUTPUT VOLTAGE RANGE

■ CALCULATION OF DAC OUTPUT VOLTAGE AT IDEAL CONVERSION

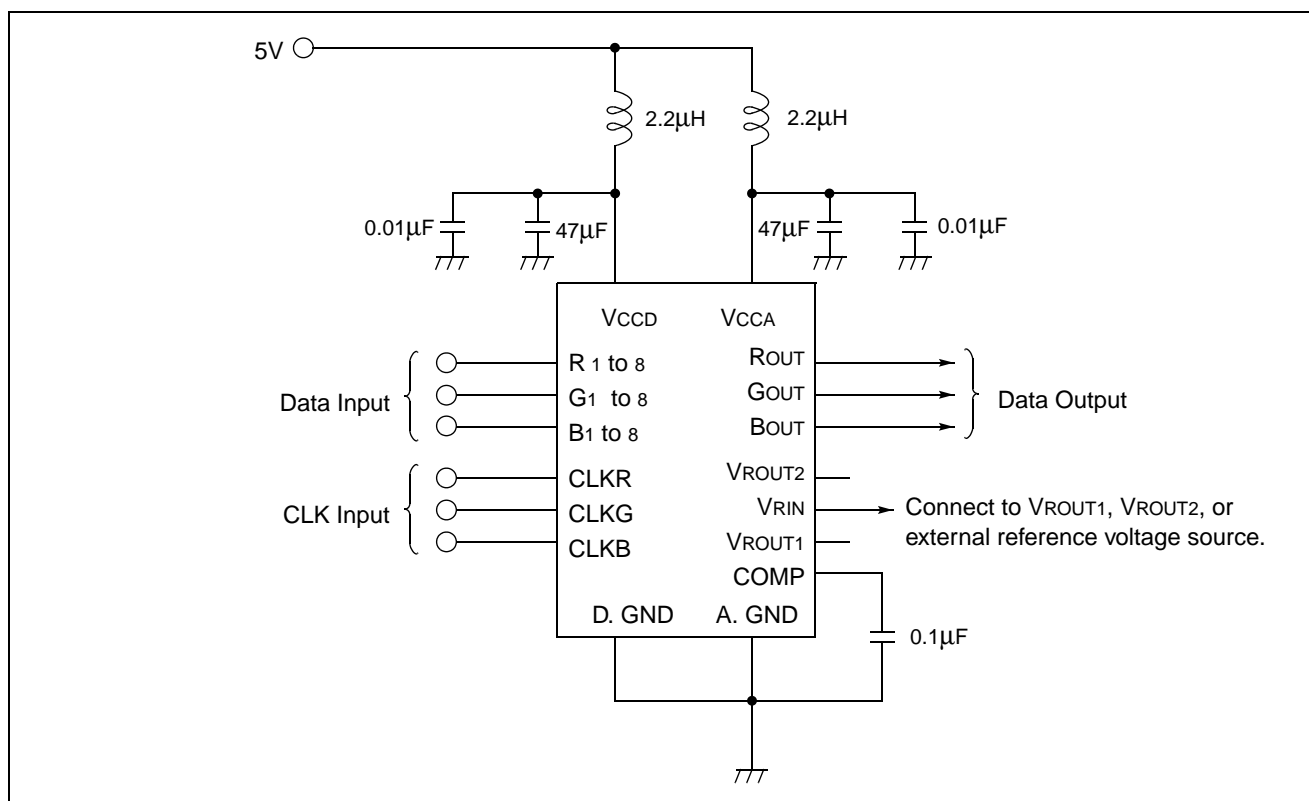

$$R_{OUT} \text{ (GOUT, BOUT)} = V_{CCA} - \frac{255 - N}{256} \times (V_{CCA} - V_{RIN})$$

[N : Digital Input Code (0 to 255)]

$$V_{OFS} = V_{CCA}$$

$$V_{OZS} = V_{CCA} - \frac{255}{256} \times (V_{CCA} - V_{RIN})$$

■ TYPICAL CONNECTION EXAMPLE

■ NOTES ON USE

1. Power Supply Patterns of the PCB

The power supply wire patterns (Vcc and GND patterns) of the PCB should be designed as wide as possible in order to reduce parasitic impedance.

2. Switching Noise

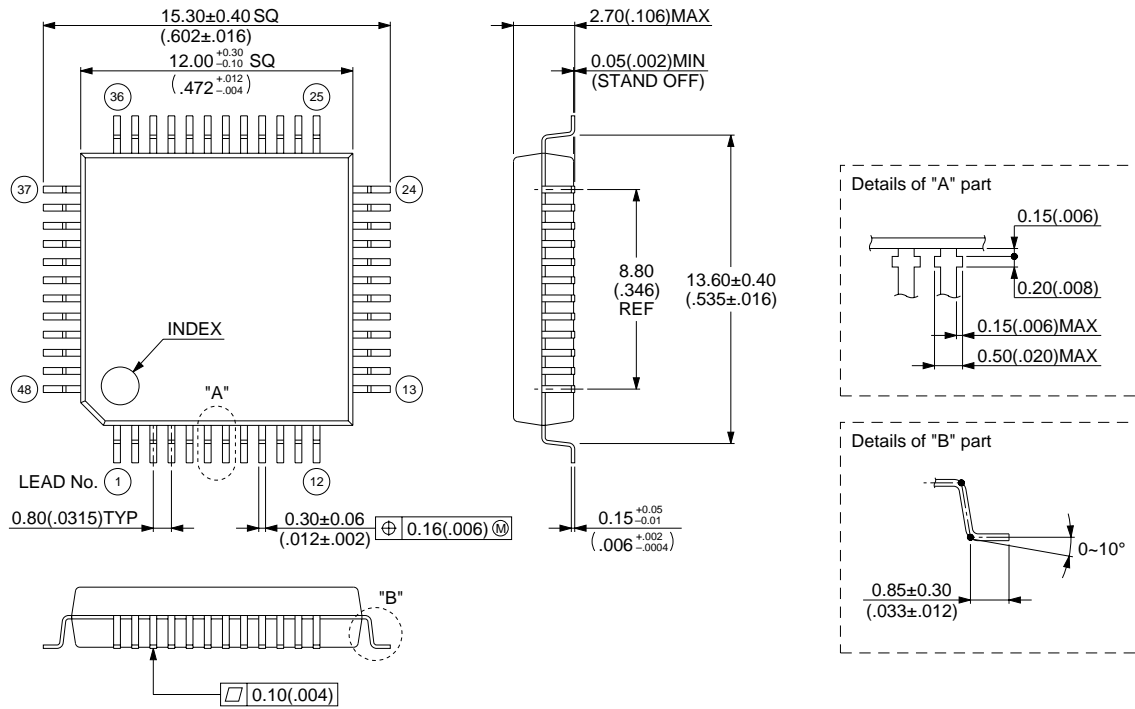

In order to reduce switching noise as much as possible, noise limit capacitor must be connected between Vcc and D. GND pins and VCCA and A. GND pins.

In this case, the capacitor should be connected to the GND pins side as near as possible.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
