MMIC wideband amplifier

Rev. 02 — 24 September 2004

Product data sheet

1. Product profile

1.1 General description

Silicon Monolithic Microwave Integrated Circuit (MMIC) wideband amplifier with internal matching circuit in a 6-pin SOT363 SMD plastic package.

CAUTION

This device is sensitive to electrostatic discharge (ESD). Therefore care should be taken during transport and handling.

1.2 Features

- Internally matched to 50 Ω
- Wide frequency range (3.2 GHz at 3 dB bandwidth)
- Flat 24 dB gain (± 1 dB up to 2.8 GHz)
- -2.5 dBm output power at 1 dB compression point
- Good linearity for low current ($IP_{3out} = 10$ dBm)
- Low second harmonic; -38 dBc at $P_D = -40$ dBm
- Low noise figure; 2.3 dB at 1 GHz
- Unconditionally stable ($K \geq 2$).

1.3 Applications

- LNB IF amplifiers
- Cable systems
- ISM
- General purpose.

8. Application information

[Figure 1](#) shows a typical application circuit for the BGA2717 MMIC. The device is internally matched to $50\ \Omega$, and therefore does not need any external matching. The value of the input and output DC blocking capacitors C2 and C3 should not be more than 100 pF for applications above 100 MHz. However, when the device is operated below 100 MHz, the capacitor value should be increased.

The 22 nF supply decoupling capacitor C1 should be located as close as possible to the MMIC.

The printed-circuit board (PCB) top ground plane, connected to pins 2, 4 and 5 must be as close as possible to the MMIC, and ideally directly beneath it. When using via holes, use multiple via holes, located as close as possible to the MMIC.

Fig 1. Typical application circuit.

[Figure 2](#) shows the PCB layout, used for the standard demonstration board.

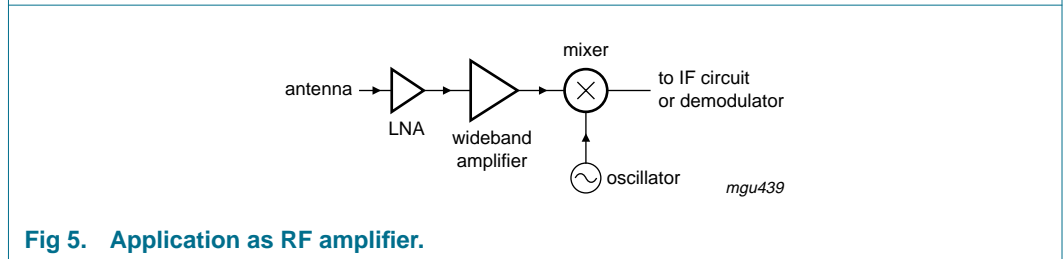

8.1 Grounding and output impedance

If the grounding is not optimal, the gain becomes less flat and the 50 Ω output matching becomes worse. If a better output matching to 50 Ω is required, a 12 Ω resistor (R1) can be placed in series with C3 (see [Figure 3](#)). This will significantly improve the output impedance, at the cost of 1 dB gain and 1 dB output power.

8.2 Application examples

The MMIC is very suitable as IF amplifier in e.g. LNBS. The excellent wideband characteristics make it an ideal building block (see [Figure 4](#)). As second amplifier after an LNA, the MMIC offers an easy matching, low noise solution (see [Figure 5](#)).

12. Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

13. Disclaimers

Life support — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
