

**LC868364A****8-Bit Single Chip Microcontroller with
64K-Byte ROM and 512-Byte RAM On Chip****Preliminary
Overview**

The LC868364A microcontroller is an 8-bit single chip microcontroller with the following on-chip functional blocks:

- CPU: Operable at a minimum bus cycle time of 0.5 μ s
- On-chip ROM capacity: 64K bytes
- On-chip RAM capacity: 512 bytes
- Dot-matrix liquid crystal display (LCD) automatic display controller/driver
- External memory
- 16-bit timer/counter (or two 8-bit timers)
- 16-bit timer/PWM (or two 8-bit timers)
- 13-source 9-vectored interrupt function

All of the above functions are fabricated on a single chip.

Features

- (1) Read Only Memory (ROM): 65,280 \times 8 bits
- (2) Random Access Memory (RAM): 512 \times 8 bits (calculation area)
 128 \times 8 bits (display area)

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

(3) Bus Cycle Time/Instruction Cycle Time

Bus cycle time	Instruction Cycle Time	System Clock Oscillation	Oscillation Frequency	Voltage	Other
0.5μs	1μs	Ceramic (CF)	12MHz	3.3-6.5V	OCR7=0
			6MHz		OCR7=1
0.75μs	1.5μs	Ceramic (CF)	4MHz	2.7-6.5V	OCR7=1
1.0μs	2μs	Ceramic (CF)	6MHz	2.4-6.5V	OCR7=0
			3MHz		OCR7=1
7.5μs	15.0μs	Internal RC (or external RC)	800kHz	2.4-6.5V	OCR7=0
3.8μs	7.5μs				OCR7=1
183μs	366μs	Crystal (Xtal)	32.768kHz	2.2-6.5V	OCR7=0
93μs	183μs				OCR7=1

* Bus cycle time: ROM-read period OCR7: Oscillation control register bit-7

(4) Ports

- Input/output ports: 6 ports (48 terminals)
 - I/O programmable in nibble units: 1 port (8 terminals)
 - I/O programmable for each bit individually: 5 ports (40 terminals)
- Input port: 1 port (4 terminals)
- LCD drive common output ports: 32 terminals/16 terminals (switched by mask option)
- LCD drive segment output ports: 32 terminals/48 terminals (switched by mask option)

(5) External Program Memory Access Function

- Ports
 1. Data input/output: 1 port (8 terminals)
 2. Address output: 2 ports (16 terminals)
 3. Bank address output: Use normal I/O ports as bank address output by program control.
- External program memory access function
 - External program memory space: 64K bytes
 - Internal/external program can be switched by program. (at initial: internal program operation mode)
 - Enabling/disabling of switching from external program to internal program is provided.
- External data memory access function
 - By LDC instruction execution:
 - External data memory space: 64K bytes (Use normal I/O ports as bank address output by program control.)
 1. When internal program is operating:
 - Access to the internal or external ROM data is selectable by program.
 2. When external program is operating:
 - Only the external ROM data can be accessed.
 - (Only the external program memory space (64K bytes) can be referred.)
- External RAM memory access function (Able to be used when internal program is executed)
 - By LDX instruction/STX instruction execution:
 - External RAM space: 64K bytes (Use normal I/O ports as bank address output by program control.)
 - (When using the external RAM space in the external program operation mode, refer to the "LC868364 User's Manual" for details.)

(6) LCD Automatic Display Controller/Common Driver/Segment Driver

- Display duty: 1/32 duty, 1/16 duty
- Display bias: 1/5, 1/7 bias
- Graphic display
 - A maximum of 1,024 dots capability (without external segment driver)
 - 32 × 80 dots display capability per each segment driver (LC868920A) can be expanded, when 1/32 duty is selected.
 - Note: If the display capability is expanded by the LC86920A when 1/16 duty is selected, only S1-S32 of the LC868364A can be used, and S33-S48 can not be used. (Refer to the LC868920A specification sheet.)*

- LCD contrast
LCD display contrast is changeable by program.
- LCD power supply (max. 6V): externally boosted output terminal
(assigned at P40 terminal, The terminal function is selectable by program.)

- LCD driver
Following two kinds of combination can be switched by mask option.

	Segment Output Terminals	Common Output Terminals
1	32	32
2	48	16

- LCD clock: Select the crystal oscillation circuit output
(in order to reduce the current consumption when LCD is on)
- LCD drive frequency: 102Hz (32.768kHz crystal oscillation)

(7) Serial Interface

- Synchronous 8-bit serial interface × 2 channels (built-in 8-bit baud rate generator)

(8) Timer

- Timer 0 (T0L, T0H)
16-bit timer/counter
2-bit prescaler + 8-bit programmable prescaler
Mode 0: Two 8-bit timers with programmable prescaler
Mode 1: 8-bit timer with programmable prescaler + 8-bit counter
Mode 2: 16-bit timer with programmable prescaler
Mode 3: 16-bit counter
- Timer 1 (T1L, T1H)
16-bit timer/PWM
Mode 0: Two 8-bit timers
Mode 1: 8-bit timer + 8-bit PWM
Mode 2: 16-bit timer
Mode 3: Variable bit PWM (9-16 bits)
- Base Timer
Generates an overflow every 500ms for a clock application. (using a 32.768kHz crystal oscillation for the base timer clock.)
Clock for the base timer is selectable from 32.768kHz crystal oscillation, system clock or programmable prescaler output of Timer 0.

(9) Buzzer Output

- Built-in 4kHz and 2kHz buzzer generation function

(10) Remote Receiver Circuit (shares with P73/INT3/T0IN terminal)

- Noise rejection function
- Polarity switch function

(11) Watchdog Timer

- External RC circuit is required (connected to P70/INT0 terminal)
- Interrupt or system reset is activated when the timer overflows.

(12) Interrupt

- 13-source and 9-vectored interrupt function:

1. External interrupt INT0 (including watchdog timer)
2. External interrupt INT1
3. External interrupt INT2, timer/counter T0L (lower 8 bits of Timer 0)
4. External interrupt INT3, base timer
5. Timer/counter T0H (upper 8 bits of Timer 0)
6. Timer T1L (lower 8 bits of Timer 1), Timer T1H (upper 8 bits of Timer 1)
7. Serial interface SIO0
8. Serial interface SIO1
9. Port 0 or Port 3

- Built-in Interrupt Priority Control

Three interrupt priorities are supported (low, high and highest) and multi-level nesting is possible. Low or high priority can be assigned to the 11 interrupt sources, from the external interrupt INT2, Timer/Counter T0L (Timer 0, lower 8 bits) to Port 0 or Port 3. For the external interrupt INT0 and INT1, low or highest priority can be set regardless of the interrupt priority register.

(13) Sub-routine Stack Level

- A maximum of 128 levels: (sets stack inside RAM)

(14) Multiplication/Division Instruction

- 16 bits \times 8-bit (7 instruction-cycle-times)
- 16 bits \div 8-bit (7 instruction-cycle-times)

(15) Three Types of Oscillation Circuit

- Built-in/external RC oscillation circuit used for the system clock
- CF oscillation circuit used for the system clock
- Xtal oscillation circuit used for the clock, system clock and LCD

* Crystal oscillation clock is also used as LCD display base clock. The current consumption of this microcontroller becomes smaller than the Sanyo's previous microcontrollers by this configuration.

Built-in/external RC oscillation circuit: switched by mask option

(16) Standby Function

- HALT mode

In this operation mode, the program execution is stopped. The mode can be released by a system reset or an interrupt request.

- HOLD mode

The HOLD mode is used to stop the oscillations;

CF, RC, and Xtal oscillations. This mode can be released by the following conditions:

- System reset
- Feed the selected level to INT0 or INT1 terminals.
- Feed "L" level to the Port 0 or Port 3.

(17) Operating Supply Voltage Range

- VDD=2.4 to 6.5V
- VLCD=2.5 to 6.5V (LCD power supply)

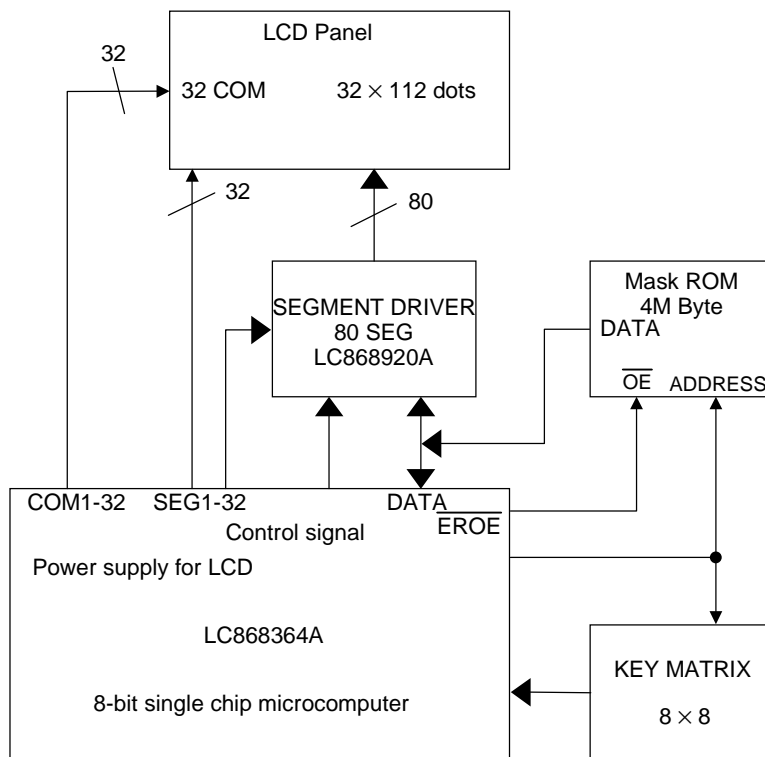

(18) Shipping Form

- Chip

(19) Development Tool

- Evaluation (EVA) chip: LC868099
- Emulator: EVA86000(main) + ECB868300 (evaluation board)

Application Circuit (Display duty: 1/32 duty)

Recommended Oscillation Circuit and Characteristics

The oscillation circuit characteristics in the table below are based on the following conditions:

- Recommended circuit parameters are verified by an oscillator manufacturer using a Sanyo provided oscillation evaluation board.
- The characteristics are the results of the evaluation with the recommended circuit parameters connected externally.

Recommended Ceramic Oscillation Circuit and Characteristics (Ta = -30°C to +70°C)

Frequency	Manufacturer	Oscillator	Recommended Circuit Parameter			Operating supply Voltage Range	Oscillation Stabilizing Time Period (typ.) *	Notes

Recommended Crystal Oscillation Circuit and Characteristics (Ta = -30°C to +70°C)

Frequency	Manufacturer	Oscillator	Recommended Circuit Parameter			Operating supply Voltage Range	Oscillation Stabilizing Time Period (typ.) *	Notes
			C3	C4	Rd2			
32.768kHz	Seiko Instruments	VT-200	12pF	12pF	330kΩ	2.2 to 6.5V	0.6s	
	Seiko Epson	C-002RX/MC-306	12pF	12pF	330kΩ	2.2 to 6.5V	0.8s	

* The oscillation stabilizing time period is the time until the oscillation becomes stable after the VDD becomes higher than the minimum operating voltage.

Notes: • Since the circuit pattern affects the oscillation frequency, place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length.
• If you use other oscillators herein, we provide no guarantee for the characteristics.

The oscillation circuit characteristics may differ by applications. For further assistance, please contact with the oscillator manufacturer with the following notes in your mind.

- Since the oscillation frequency precision is affected by wiring capacity of the application board, etc., adjust the oscillation frequency on the production board.
- The above oscillation frequency and the operating supply voltage range are based on the operating temperature of -30°C to +70°C. For the use with the temperature outside of the range herein, or in the applications requiring high reliability such as car products, please consult with oscillator manufacturer.

Since the oscillation circuit characteristics are affected by the noise, wiring capacity, etc., refer to the following notices.

- The distance between the clock I/O terminal and external parts should be as short as possible.
- The capacitors' VSS should be allocated close to the microcontroller's GND terminal and be away from other GND.
- The signal lines with rapid state changes or the signal line with large amplitude such as middle withstand voltage port or LCD driver output should be allocated away from the clock oscillation circuit.
- The signal lines with large current should be allocated away from the oscillation circuit.

■ Evaluation Sample (ES)

Shipping Form: LC868364: chip, Evaluation sample: SQFC144 (shown below) or chip

If you use the ES in the package to design and fabricate an evaluation board, refer to the following pin assignment.

• Pin Assignment of evaluation sample (Package type)

memo:

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
