Description

M/A-COM's MAALSS0025 is a high dynamic range, low noise GaAs MMIC amplifier in a low cost, surface mount package. It employs external input matching to obtain optimum noise figure performance and operating frequency flexibility.

The MAALSS0025 also features flexible biasing to control the current consumption vs. dynamic range trade-off. The MAALSS0025 can operate from any supply voltage in the 3 V to 8 V range. Its current can be controlled over a range of 20 mA to 80 mA with an external resistor.

The MAALSS0025 is ideally suited for use where low noise figure, high gain, high dynamic range, and low power consumption are required. Typical applications include receiver front ends in CDMA450 base stations. It is also useful as a gain block, buffer, driver, and IF amplifier in both fixed and portable cellular and 450 MHz ISM systems.

The MAALSS0025 is fabricated using a low-cost 0.5-micron gate length GaAs process. process features full passivation for increased performance reliability.

Handling Procedures

The following precautions should be observed to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

External Circuitry Parts List

Part	Value	Purpose	
C1	100 pF	DC Block	
C2	8 pF	Input Matching	
C3	470 pF	Bypass	
C4	4 pF	Output Matching	
L1	22 nH	Input Matching	
L2	43 nH	Input Matching	
L3	12 nH	RF Choke	
L4	11 nH	Output Matching	
R1	15 Ohms	Optional current control (see note 5)	

Pin 2 allows use of an external resistor to ground for optional, higher current. For 20 mA operation, no resistor is used.

For IDD ~ 40 mA, R2 = 43 ohms; IDD ~ 60 mA, R2 = 15 ohms;

IDD \sim 80 mA, R2 = 10 ohms.
