

Coil Components (SMD)

MC-200SC and MC-200SD Series

■ Features

1. Excellent High Frequency Characteristics

Insertion loss: 0.6 dB TYP.
Phase balance: $\pm 3\text{deg}$ TYP.

2. Highly Reliable Design

PPS resin is used for the exterior cladding of the cover, glass epoxy substrate is used for the board material, and solder plating is used for the electrodes. All these factors contribute to excellent mechanical strength, heat resistance, and soldering qualities

3. Suited to Automatic Mounting

Embossed tape packaging permits automatic mounting. (Individual delivery can also be accommodated.)

● Please apply resist processing to the area around the electrode pads.

Precautions

1. Soldering (1) Recommended temperature profile	<p>Note 1: Up to 2 cycles of reflow soldering are possible under the same conditions, provided that there is a return to normal temperature between the first and second cycle.</p> <p>Note 2: The temperature profile indicates the board surface temperature at the point of contacts with the connector terminals (for surface mounted receptacle).</p>
(2) Recommended manual soldering	Manual soldering: 260°C for 10 seconds
(3) Recommended screen thickness	0.15 mm
2. Product Storage	① After opening the package reseal promptly or store in a desiccator with a desiccant. ② Store in a place that is not exposed to harmful gases which include sulfur or chlorine, etc. ③ Use within one year of delivery.
