

STEPLESS 200MHZ 3-DIMM CLOCK FOR SOLANO CHIPSET

1.0 GENERAL DESCRIPTION

The W83195BR-S is a Clock Synthesizer for Intel 815 Solano chipset. W83195BR-S provides all clocks required for high-speed RISC or CISC microprocessor and also provides 64 different frequencies of CPU, SDRAM, PCI, 3V66, IOAPIC clocks frequency setting. All clocks are externally selectable with smooth transitions.

The W83195BR-S provides I²C serial bus interface to program the registers to enable or disable each clock outputs and provides 0.25% and 0.5% center type spread spectrum to reduce EMI. A watch dog timer is quipped and when time out, the RESET# pin will output 4ms pulse signal.

The W83195BR-S provides stepless frequency programming by controlling the VCO freq. and the clock output divisor ratio. Also the skew of CPU, SDRAM and 3V66 clock outputs are programmable.

The W83195BR-S accepts a 14.318 MHz reference crystal as its input and runs on a 3.3V supply. High drive PCI and SDRAM CLOCK outputs typically provide greater than 1 V/ns slew rate into 30 pF loads. CPU CLOCK outputs typically provide better than 1 V/ns slew rate into 20 pF loads as maintaining 50±5% duty cycle. The fixed frequency outputs as REF, 24MHz, and 48 MHz provide better than 0.5V/ns slew rate.

2.0 PRODUCT FEATURES

- 2 CPU clocks
- 3 3V66 for chipset and AGP clocks
- 12 SDRAM clocks for 3 DIMMs
- 8 PCI synchronous clocks.
- Optional single or mixed supply:
(VddR = VddP=VddS = Vdd48 = Vdd3 = 3.3V, VddLAPIC=VddLCPUs=2.5V)
- Skew form CPU to PCI clock -1 to 4 ns, center 2.6 ns
- Smooth frequency switch with selections from 66.8 to 200 MHz
- I²C 2-Wire serial interface and I²C read back
- 0.25% and 0.5% center type spread spectrum
- Programmable registers to enable/stop each output and select modes
(mode as Tri-state or Normal)
- Two 48 MHz pins for USB
- 24 MHz for super I/O
- 56-pin SSOP package

5.0 SERIAL CONTROL 0REGISTERS

The Pin column lists the affected pin number and the @PowerUp column gives the state at true power up. Registers are set to the values shown only on true power up. "Command Code" byte and "Byte Count" byte must be sent following the acknowledge of the Address Byte. Although the data (bits) in these two bytes are considered "don't care", they must be sent and will be acknowledge. After that, the below described sequence (Register 0, Register 1, Register 2,) will be valid and acknowledged.

Frequency Table Setting by I2C (SEL5 ~ SEL0)

6.0 ORDERING INFORMATION

Part Number	Package Type	Production Flow
W83195BR-S	56 PIN SSOP	Commercial, 0°C to +70°C

7.0 HOW TO READ THE TOP MARKING

1st line: Winbond logo and the type number: W83195BR-S

2nd line: Tracking code 2 8051234

2: wafers manufactured in Winbond FAB 2

8051234: wafer production series lot number

3rd line: Tracking code 814 G B B

814: packages made in '98, week 14

G: assembly house ID; O means OSE, G means GR

A: Internal use code

B: IC revision

All the trade marks of products and companies mentioned in this data sheet belong to their respective owners.
