

## A. HE83132 Introduction

HE83132 is a member of 8-bit Micro-controller series that is developed by King Billion. Users can choose any one of combination among **【320 dots LCD Driver+ 32 Bit I/O Port】** .. **【640 dots LCD Driver + 32 Bit I/O Port】** ...etc. (Decide by Mask Option). This IC has built-in one OP comparator. The built-in OP comparator can be used with (light 、 voice 、 temperature 、 humidity) sensor. The 7-bit current-type D/A converter and PWM device provide the complete speech output mechanism. The 512K ROM Size can storage around 160 second's speech. This IC is applicable to the medium systems such as LCD Games and Educational Toy etc. Use external SRAM or Flash RAM to have recording function. This IC is applicable to the medium systems such as LCD Games, Education Toy etc. This IC is very easy to learn and use. Most of instructions take only 1.5 oscillator clocks (machine cycles). As a result this IC is suitable for the applications that require higher performance system.
