## 2.5 V 13-bit to 26-bit SSTL\_2 registered buffer for stacked DDR DIMM

SSTV16859

### FEATURES

- Stub-series terminated logic for 2.5 V  $V_{DD}$  (SSTL\_2)
- Optimized for stacked DDR (Double Data Rate) SDRAM applications
- Supports SSTL\_2 signal inputs as per JESD 8–9
- Flow-through architecture optimizes PCB layout
- ESD classification testing is done to JEDEC Standard JESD22. Protection exceeds 2000 V to HBM per method A114.
- Latch-up testing is done to JEDEC Standard JESD78, which exceeds 100 mA.
- Supports efficient low power standby operation
- Full DDR 200/266 solution for stacked DIMMs at 2.5 V when used with PCKV857
- See SSTV16857 for JEDEC compliant register support in unstacked DIMM applications
- See SSTV16856 for driver/buffer version with mode select.

### DESCRIPTION

The SSTV16859 is a 13-bit to 26-bit SSTL\_2 registered driver with differential clock inputs, designed to operate between 2.3 V and 2.7 V. All inputs are compatible with the JEDEC standard for SSTL\_2 with  $V_{REF}$  normally at  $0.5 \times V_{DD}$ , except the LVCMOS reset ( $\overline{RESET}$ ) input. All outputs are SSTL\_2, Class II compatible which can be used for standard stub-series applications or capacitive loads. Master reset ( $\overline{RESET}$ ) asynchronously resets all registers to zero.

The SSTV16859 is intended to be incorporated into standard DIMM (Dual In-Line Memory Module) designs defined by JEDEC, such as

DDR (Double Data Rate) SDRAM and SDRAM II Memory Modules. Different from traditional SDRAM, DDR SDRAM transfers data on both clock edges (rising and falling), thus doubling the peak bus bandwidth. A DDR DRAM rated at 133 MHz will have a burst rate of 266 MHz.

The device data inputs consist of different receivers. One differential input is tied to the input pin while the other is tied to a reference input pad, which is shared by all inputs.

The clock input is fully differential (CK and  $\overline{CK}$ ) to be compatible with DRAM devices that are installed on the DIMM. Data are registered at the crossing of CK going high, and  $\overline{CK}$  going low. However, since the control inputs to the SDRAM change at only half the data rate, the device must only change state on the positive transition of the CK signal. In order to be able to provide defined outputs from the device even before a stable clock has been supplied, the device has an asynchronous input pin ( $\overline{RESET}$ ), which when held to the LOW state, resets all registers and all outputs to the LOW state.

The device supports low-power standby operation. When  $\overline{RESET}$  is low, the differential input receivers are disabled, and undriven (floating) data, clock, and reference voltage ( $V_{REF}$ ) inputs are allowed. In addition, when  $\overline{RESET}$  is low, all registers are reset, and all outputs are forced low. The LVCMOS  $\overline{RESET}$  input must always be held at a valid logic high or low level.

To ensure defined outputs from the register before a stable clock has been supplied,  $\overline{RESET}$  must be held in the low state during power-up.

In the DDR DIMM application,  $\overline{RESET}$  is specified to be completely asynchronous with respect to CK and  $\overline{CK}$ . Therefore, no timing relationship can be guaranteed between the two. When entering  $\overline{RESET}$ , the register will be cleared and the outputs will be driven low. As long as the data inputs are low, and the clock is stable during the time from the low-to-high transition of  $\overline{RESET}$  until the input receivers are fully enabled, the outputs will remain low.

Available in 64-pin plastic thin shrink small outline package.

### QUICK REFERENCE DATA

$GND = 0\text{ V}$ ;  $T_{amb} = 25^\circ\text{C}$ ;  $t_r = t_f \leq 2.5\text{ ns}$

SYMBOL	PARAMETER	CONDITIONS	TYPICAL	UNIT
$t_{PHL}/t_{PLH}$	Propagation delay; CLK to Qn	$C_L = 30\text{ pF}$ ; $V_{DD} = 2.5\text{ V}$	2.4	ns
$C_I$	Input capacitance	$V_{CC} = 2.5\text{ V}$	2.7	pF

#### NOTE:

1.  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu\text{W}$ )  $P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_o)$  where:  
 $f_i$  = input frequency in MHz;  $C_L$  = output load capacity in pF;  $f_o$  = output frequency in MHz;  $V_{CC}$  = supply voltage in V;  
 $\sum (C_L \times V_{CC}^2 \times f_o)$  = sum of the outputs.

## ABSOLUTE MAXIMUM RATINGS<sup>1</sup>

SYMBOL	PARAMETER	CONDITION	LIMITS		UNIT
			MIN	MAX	
$V_{DD}$	Supply voltage range		-0.5	+3.6	V
$V_I$	Input voltage range	Notes 2 and 3	-0.5	$V_{DD} + 0.5$	V
$V_O$	Output voltage range	Notes 2 and 3	-0.5	$V_{DD} + 0.5$	V
$I_{IK}$	Input clamp current	$V_I < 0$ or $V_I > V_{DD}$	—	$\pm 50$	mA
$I_{OK}$	Output clamp current	$V_O < 0$ or $V_O > V_{DD}$	—	$\pm 50$	mA
$I_O$	Continuous output current	$V_O = 0$ to $V_{DD}$	—	$\pm 50$	mA
	Continuous current through each $V_{DD}$ or GND		—	$\pm 100$	mA
$T_{stg}$	Storage temperature range		-65	+150	°C

### NOTES:

- Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- This value is limited to 3.6 V maximum.
- The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures that are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.

## RECOMMENDED OPERATING CONDITIONS<sup>1</sup>

SYMBOL	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNIT
$V_{DD}$	Supply voltage		$V_{DD}$	—	2.7	V
$V_{REF}$	Reference voltage ( $V_{REF} = V_{DD}/2$ )		1.15	1.25	1.35	V
$V_{TT}$	Termination voltage		$V_{REF} - 40$ mV	$V_{REF}$	$V_{REF} + 40$ mV	V
$V_I$	Input voltage		0	—	$V_{DD}$	V
$V_{IH}$	AC HIGH-level input voltage	Data inputs	$V_{REF} + 310$ mV	—	—	V
$V_{IL}$	AC LOW-level input voltage	Data inputs	—	—	$V_{REF} - 310$ mV	V
$V_{IH}$	DC HIGH-level input voltage	Data inputs	$V_{REF} + 150$ mV	—	—	V
$V_{IL}$	DC LOW-level input voltage	Data inputs	—	—	$V_{REF} - 150$ mV	V
$V_{IH}$	HIGH-level input voltage	RESET	1.7	—	$V_{DD}$	V
$V_{IL}$	LOW-level input voltage		0.0	—	0.7	V
$V_{ICR}$	Common-mode input range	CK, $\overline{CK}$	0.97	—	1.53	V
$V_{ID}$	Differential input voltage	CK, $\overline{CK}$	360	—	—	mV
$I_{OH}$	HIGH-level output current		—	—	-20	mA
$I_{OL}$	LOW-level output current		—	—	20	mA
$T_{amb}$	Operating free-air temperature range		0	—	+70	°C

### NOTE:

- The RESET input of the device must be held at  $V_{DD}$  or GND to ensure proper device operation. The differential inputs must not be floating, unless RESET is low.

## TIMING REQUIREMENTS

Over recommended operating conditions;  $T_{amb} = 0$  to  $+70$  °C (unless otherwise noted) (see Figure 1)

SYMBOL	PARAMETER	TEST CONDITIONS	LIMITS		UNIT
			$V_{DD} = 2.5 V \pm 0.2 V$		
			MIN	MAX	
$f_{clock}$	Clock frequency		—	200	MHz
$t_w$	Pulse duration, CK, $\overline{CK}$ HIGH or LOW		2.5	—	ns
$t_{act}$	Differential inputs active time	Notes 1, 2	—	22	ns
$t_{inact}$	Differential inputs inactive time	Notes 1, 3	—	22	ns
$t_{su}$	Setup time, fast slew rate (see Notes 4 and 6)	Data before CK $\uparrow$ , $\overline{CK}\downarrow$	0.75		ns
	Setup time, slow slew rate (see Notes 5 and 6)		0.9		
$t_h$	Hold time, fast slew rate (see Notes 4 and 6)	Data after CK $\uparrow$ , $\overline{CK}\downarrow$	0.75		ns
	Hold time, slow slew rate (see Notes 5 and 6)		0.9		
$t_{SL}$	Output slew		1	6	V/ns

### NOTES:

1. This parameter is not necessarily production tested.
2. Data inputs must be below a minimum time of  $t_{act}$  max, after  $\overline{RESET}$  is taken high.
3. Data and clock inputs must be held at valid levels (not floating) a minimum time of  $t_{inact}$  max, after  $\overline{RESET}$  is taken low.
4. For data signal input slew rate  $\geq 1$  V/ns.
5. For data signal input slew rate  $\geq 0.5$  V/ns and  $< 1$  V/ns.
6. CK,  $\overline{CK}$  signals input slew rates are  $\geq 1$  V/ns.

## SWITCHING CHARACTERISTICS

Over recommended operating conditions;  $T_{amb} = 0$  to  $+70$  °C;  $V_{DD} = 2.3 - 2.7 V$ .Class I,  $V_{REF} = V_{TT} = V_{DD} \times 0.5$  and  $C_L = 10$  pF (unless otherwise noted) (see Figure 1)

SYMBOL	FROM (INPUT)	TO (OUTPUT)	LIMITS		UNIT
			$V_{DD} = 2.5 V \pm 0.2 V$		
			MIN	MAX	
$f_{max}$			200	—	MHz
$t_{pd}$	CK and $\overline{CK}$	Q	1.1	2.8	ns
$t_{PHL}$	$\overline{RESET}$	Q	1.1	5	ns

SSTV16859

## OUTPUT BUFFER CHARACTERISTICS

The following table describes output-buffer Voltage vs. Current (V/I) characteristics that are sufficient to meet the requirements of registered DDR DIMM performance and timings. These characteristics are not necessarily production tested but can be guaranteed by design or characterization. Compliance with these curves is not mandatory if it can be adequately demonstrated that alternate characteristics meet the requirements of the registered DDR DIMM application.

VOLTAGE (V)	PULL-DOWN		PULL-UP

Waveform 2. Pulse duration

Waveform 3. Propagation delay times

Waveform 4. Propagation delay times

Waveform 5. Setup and hold times

### NOTES:

1.  $I_{DD}$  tested with clock and data inputs held at  $V_{DD}$  or GND, and  $I_O = 0$  mA.
2. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10$  MHz,  $Z_O = 50 \Omega$ , input slew rate =  $1$  V/ns  $\pm 20\%$  (unless otherwise specified).
3. The outputs are measured one at a time with one transition per measurement.
4.  $V_{TT} = V_{REF} = V_{DD}/2$
5.  $V_{IH} = V_{REF} + 310$  mV (ac voltage levels) for differential inputs.  $V_{IH} = V_{DD}$  for LVC MOS input.
6.  $V_{IL} = V_{REF} - 310$  mV (ac voltage levels) for differential inputs.  $V_{IL} = \text{GND}$  for LVC MOS input.
7.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .

[2] The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL <http://www.semiconductors.philips.com>.

## Definitions

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

**Limiting values definition** — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

**Right to make changes** — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
