## notes:

1 Output is fully isolated
2 Output voltage is measured at output power connector.
3150 W max combined power for $\mathrm{V}_{1}$ and $\mathrm{V}_{2}$ for VF-D320-D1224A-CFS, 125 W max. for all other models.
4300 W max combined power for $\mathrm{V}_{1}$ and $\mathrm{V}_{2}$ for VF-D320-D1224A-CFS, 250 W max. for all other models.
$510 \%$ minimum load is required to maintain the ripple and regulation.
6 Ripple and noise are measured from 10 KHz to 20 MHz at output terminals with a $0.1 \mu \mathrm{~F}$ ceramic capacitor and a $22 \mu \mathrm{~F}$ electrolytic capacitor in parallel.

| input frequency |  | 47 |  | 63 | Hz |
| input voltage | 90-132 / 180-264 auto-selectable | 90 |  | 264 | VAC |
| Input current | At 100-120 VAC |  |  | 8 | A |
|  | At 200-240 VAC |  |  | 4 | A |

|  | Peak measured at 115 VAC at full load, cold start |  |  | 35 | A |

OUTPUT

| parameter | conditions/description min | nom max | units |
| :---: | :---: | :---: | :---: |
| transient response | Output voltage returns to within $1 \%$ in less than <br> 2.5 mS for a $50 \%$ load change. Peak transient does not exceed $5 \%$. |  |  |
| overshoot | Turn-on and turn-off overshoot shall not exceed $5 \%$ over nominal voltage. |  |  |
| efficiency | Measured at 230 V and full load 75\% |  |  |
| turn on delay | At 120 VAC | 1 | second |
| hold up time | At 120 VAC and $80 \%$ of rated maximim load 20 |  | ms |
| adjustability | Adjustable with built-in trim pot. $+/-5 \%$ |  |  |
| LED display | When green (LED1) is on the power supply is operating normally. |  |  |
| power good | Designated as PG on the CN1. This signal goes TTL high 100-500 mS after the output reaches regulation. It goes low at least 1 mS before loss of regulation. |  |  |
| fan drive | $12 \mathrm{VDC/} 400 \mathrm{~mA}$ for external fan |  |  |

## PROTECTION CIRCUIT

| parameter | conditions/description |
| :--- | :--- |
| input fuse | Built-in ac fuse. A blown fuse usually indicates permanent <br> damage to the power supply serviceable by factory only. |
| overload | Current limiting starts at 110-140\% of the rated output current in foldback mode and <br> recovers automatically. |
| short circuit | Short circuit can be continuous. Recovers automatically upon removal of short. |
| output over-voltage | Output is protected agaist overvoltage. Unit shuts down and latches <br> when voltage at output terminals exceeds 130\%. AC input needs to be <br> reset to restart the power supply. |
| Power supply shuts down when temperature is in excess of $85^{\circ} \mathrm{C}$. Auto recovery. |  |
