## Recommended Soldering Conditions

1. Hand Solder

Basic spec is $\leqq 280^{\circ} \mathrm{C} 3 \mathrm{sec}$ one time only.
2. Wave Solder

3. LEAD Reflow Solder

4. PB-Free Reflow Solder

Note: 1.Wave solder and reflow soldering should not be made more than one time.
2. You can just only select one of the soldering conditions as above.

## Precautions For Use:

Storage time:
1.The operation of Temperatures and RH are : $5^{\circ} \mathrm{C} \sim 35^{\circ} \mathrm{C}, \mathrm{RH}<60 \%$.
2. Once the package is opened, the products should be used within a week.

Otherwise, they should be kept in a damp proof box with descanting agent.
Considering the tape life, we suggest our customers to use our products within
a year(from production date).
3. If opened more than one week in an atmosphere $5^{\circ} \mathrm{C} \sim 35^{\circ} \mathrm{C}, \mathrm{RH}<60 \%$,
they should be treated at $60^{\circ} \mathrm{C} \pm 5{ }^{\circ} \mathrm{C}$ for 15 hrs .

## Drive Method:

LED is a current operated device, and therefore, requirer some kind of current limiting incorporated into the driver circuit. This current limiting typically takes the form of a current limiting resistor placed in series with the LED.
Consider worst case voltage variations than could occur across the current limiting resistor. The forwrd current should not be allowed to change by more than $40 \%$ of its desired value.

## Circuit model A

## Circuit model B

(A) Recommended circuit.
(B) The difference of brightness between LED could be found due to the VF-IF characteristics of LED.

Cleaning:

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

## ESD(Electrostatic Discharge):

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrosatic glove is recommended when handing these LED. All devices, equipment and machinery must be properly grounded.
