ALPHA Distribution Boards and Terminal Blocks

ALPHA FIX terminal blocks 8WA1 screw-type terminal

Technology proven in practice

The ALPHA FIX 8WA1 screw-type terminal is accepted the world over and is fitted in almost all areas.

If you opt for the proven screw-type terminal, the ALPHA FIX 8WA1 terminal blocks are a good choice. They're insulated on both sides and closed at both ends. That stabilizes the terminal block so end plates are unnecessary, allowing you to significantly reduce your inventory.

The clamping parts are designed so that the tensile stress that occurs when the clamping screws are tightened deform the clamping parts elastically. This compensates for any creeping of the clamped conductor. The deformation of the screwed part prevents the clamping screw from loosening, even under heavy mechanical and thermal stress.

8WA1 terminal block Reliable thanks to proven screw connection

- Terminals closed on both sides dispense with the need for end plates
- Terminals are stable ideal for use with electrical screwdrivers
- Symmetrical structure dispenses with the need to align the terminals before fitting onto the 35 mm rail conforming to DIN EN 60715
- Thanks to a flexible terminal body, there is no need to retighten the terminal screws
- Save time and money with fix combination of terminal blocks
- Robust terminal structure
